

Adeept

# Adeept Robotic Arm

## About Adeept

Adeept is a technical service team of open source software and hardware. Dedicated to applying the Internet and the latest industrial technology in open source area, we strive to provide best hardware support and software service for general makers and electronic enthusiasts around the world. We aim to create infinite possibilities with sharing. No matter what field you are in, we can lead you into the electronic world and bring your ideas into reality.

**Technical Support:** support@adeept.com

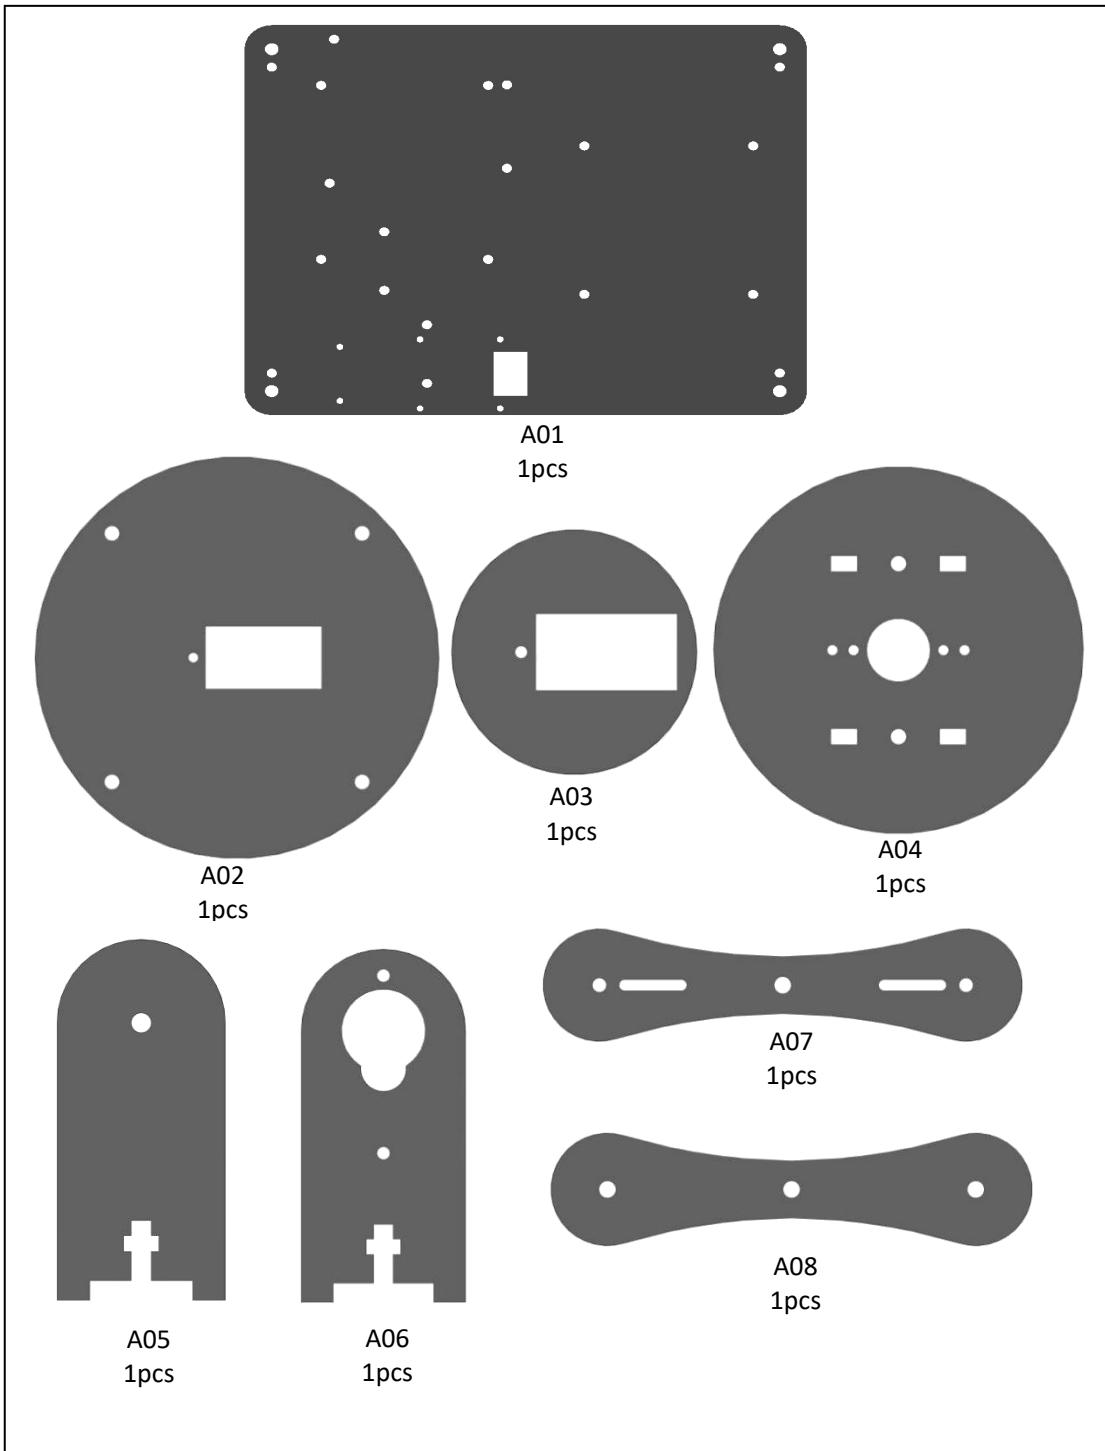

**Customer Service:** service@adeept.com

## Components List

### 1.1 Acrylic Plates

The acrylic plates are fragile, so please be careful when assembling them in case of breaking.

The acrylic plate is covered with a layer of protective film. You need to remove it first.

Some holes in the acrylic may have residues, so you need to clean them before the use.

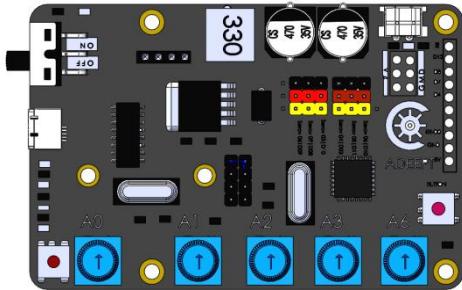

## 1.2. Machinery Parts

## Introduction of Robotic Arm

Nowadays, under the progress of science and technology, the biggest difference between a robotic arm and a human arm lies in flexibility and strength. That is, the biggest advantage of the robotic arm is that normally it can repeat the same motion without feeling tired. Today Adeept recommends a robotic learning kit to learn how to assemble a robotic arm and learn how to write the code to control the robotic arm to perform the specific motions. We provide a completed using method for learning Arduino and Processing write PC software and send motion commands to the robotic arm with Processing; write the motion of the servo of the robotic arm with Arduino.

Assemble video address: <https://www.adeept.com/video/detail-81.html>

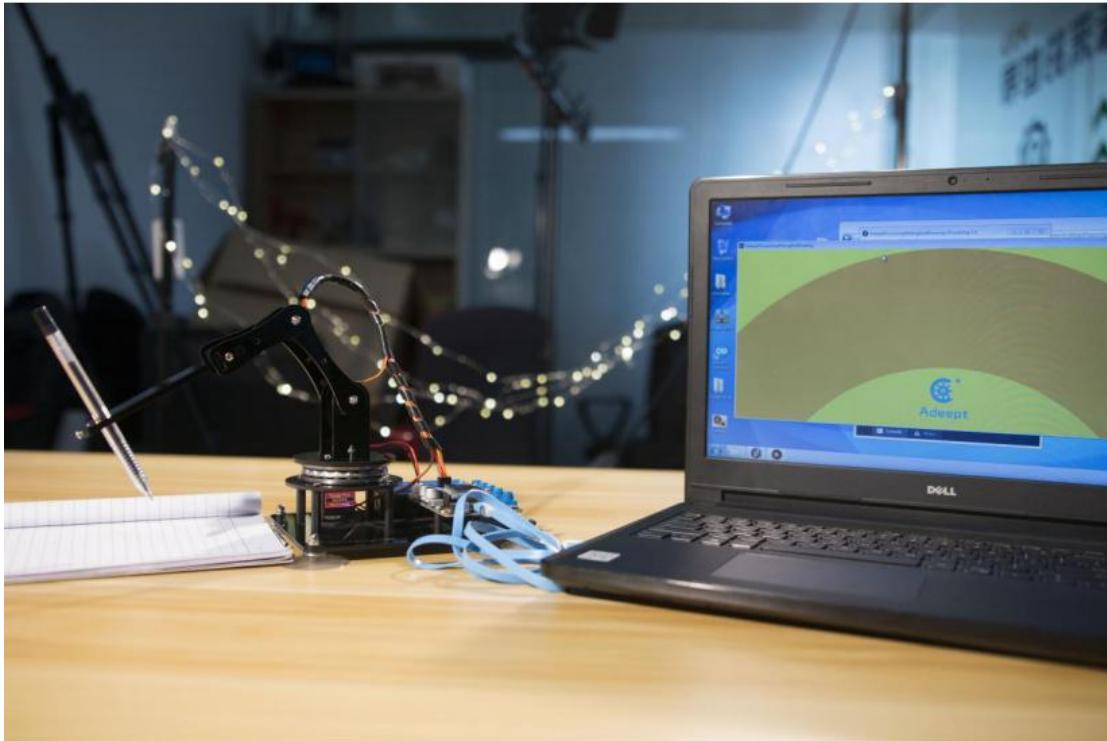

The following figure shows that we control the robotic arm to pick up the object through the keyboard with serial communication.

The following figure shows that we control the robotic arm to write and draw through the mouse with serial communication.

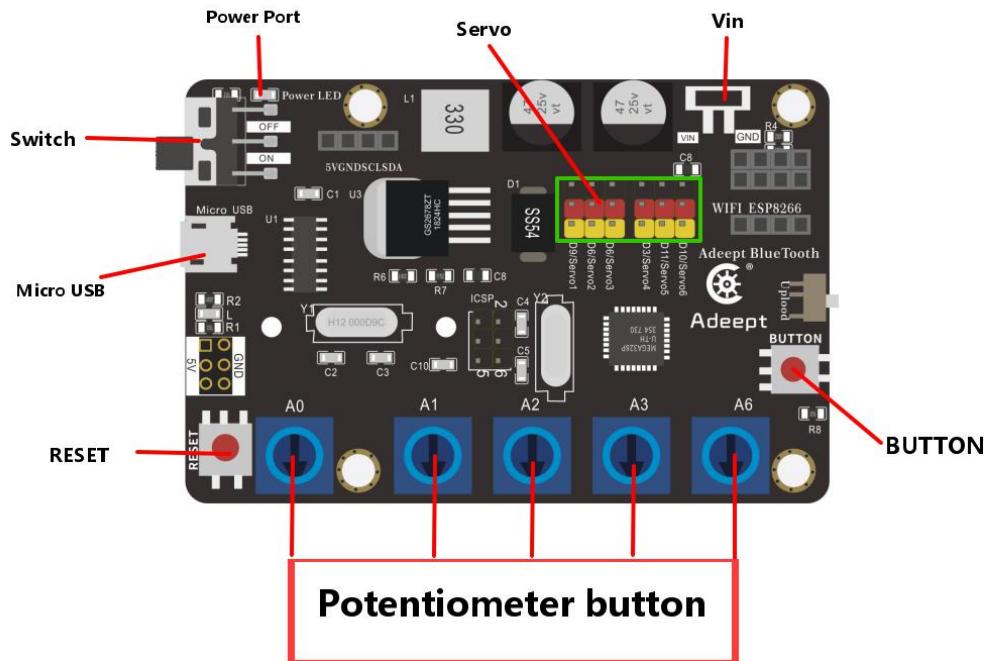

We have added the learning and memory function to the robotic arm. We let the robotic arm to record the manually controlled mechanical movements we made, and the robotic arm can learn repeatedly, such as repeat moving the object, repeat drawing the same graphic, repeat keyboard input and repeat turning book pages.

## Introduction of Adeept Arm Drive Board

The Adeept Arm Drive Board development board is the main component of the robotic arm. Similar to the Arduino UNO development board, it is also an easy-to-use open source electronic prototyping platform, including the hardware part and the software part (Arduino IDE). The Adeept Arm Drive Board development board is mainly composed of a microcontroller (MCU), a universal input/output interface, etc. You can understand it as a microcomputer motherboard. We will introduce the Adeept Arm Drive Board development board in detail.

### 【1】 Power LED:

Power LED is used to indicate the power status of the system. The LED is on, indicating that the system is powered on and ready to run; the LED is off, indicating that the system is not powered on.

### 【2】 Servo:

It is the pin interface of Servo.

### 【3】 Vin (6-24V) :

It is the pin interface for external power supply. Use 6-24V external power supply to power the Adeept SmartHub development board.

#### **【4】RESET:**

Restarting the Adeept SmartHub development board.

#### **【5】Switch:**

When using Vin (6-24V) as an external power supply, Switch can control the OFF and ON of the Adeept SmartHub development board.

#### **【6】Micro USB:**

It is used to connect the Micro USB interface of the computer to realize the serial communication, uploading program and serial monitoring between the Adeept SmartHub development board and the computer.

#### **【7】Potentiometer button:**

Potentiometer button has five buttons: A0, A1, A2, A3, and A6. By rotating these buttons, you can control the movement of the robotic arm.

In the following courses, we will combine the application of various components to further learn the practical application of the Adeept Arm Drive Board development board.

# Building the Arduino Development Environment

## 1. Arduino development language

Arduino uses C/C++ to write programs, so before learning Arduino, you need to master the C/C++ language. Although C++ is compatible with the C language, these are two different languages. C is a process-oriented programming language, and C++ is an object-oriented programming language. The early Arduino core library was written in C language. Later, object-oriented ideas were introduced. At present, the latest Arduino core library is written in C and C++.

Generally speaking, the Arduino language refers to a collection of various Application Programming Interfaces (APIs) provided by the Arduino core library files. These APIs are formed by secondary packaging of the lower-level microcontroller support library. For example, the core library of Arduino using AVR microcontroller is the secondary packaging of AVR-LIBC (GCC-based AVR support library).

In the traditional development method, multiple registers need to be configured to achieve the corresponding functions. In Arduino, the complicated registers are encapsulated into simple APIs, which can be intuitively controlled, enhancing the readability of the program and improving the development efficiency.

## 2. Arduino program structure

The Arduino program structure is different from the traditional C/C++ program structure-there is no main() function in the Arduino program. In fact, it is not that there is no main() function in the Arduino program, but that the definition of the main() function is hidden in the core library file of the Arduino. In the development of Arduino, the main function is not directly operated, but the two functions of setup() and loop() are used instead.

### 3. The construction of the Arduino development environment

The IDE of the Arduino development environment can be downloaded from the official website. The download address of the Arduino IDE is:  
<https://store.arduino.cc/usa/>

#### (1) Install Arduino IDE under Windows

We will teach you how to download and install:

1. Open Google Chrome and enter the URL in the address bar:

<https://store.arduino.cc/usa/>

After successfully opening the interface as shown below, we click DOWNLOADS under SOFTWARE.

2. After jumping to the following interface, slide the mouse to the middle to find the part marked in the red circle. You can find that the official website provides us with installation files for Windows, Mac OS X, and Linux systems.

## Download the Arduino IDE

**ARDUINO 1.8.12**

The open-source Arduino Software (IDE) makes it easy to write code and upload it to the board. It runs on Windows, Mac OS X, and Linux. The environment is written in Java and based on Processing and other open-source software.

This software can be used with any Arduino board. Refer to the [Getting Started](#) page for installation instructions.

**Windows Installer**, for Windows 7 and up  
**Windows ZIP file for non admin install**

**Windows app** Requires Win 8.1 or 10  
[Get](#)

**Mac OS X** 10.10 or newer

**Linux** 32 bits  
 Linux 64 bits  
 Linux ARM 32 bits  
 Linux ARM 64 bits

[Release Notes](#)  
[Source Code](#)  
[Checksums \(sha512\)](#)

3. We click the installation package of Windows ZIP file for non admin install. After the interface jumps, we select JUST DOWNLOAD. And then start the download. The download status will be displayed in the lower left of Google Chrome. Then we wait for the download to complete.

## Download the Arduino IDE

**ARDUINO 1.8.12**

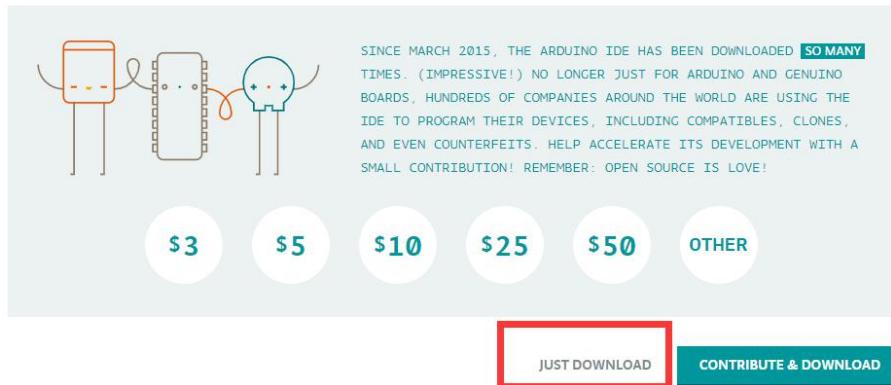

The open-source Arduino Software (IDE) makes it easy to write code and upload it to the board. It runs on Windows, Mac OS X, and Linux. The environment is

**Windows Installer**, for Windows 7 and up  
**Windows ZIP file for non admin install**

**Windows app** Requires Win 8.1 or 10  
[Get](#)

## Contribute to the Arduino Software

Consider supporting the Arduino Software by contributing to its development. (US tax payers, please note this contribution is not tax deductible). [Learn more on how your contribution will be used.](#)

## Contribute to the Arduino Software

Consider supporting the Arduino Software by contributing to its development. (US tax payers, please note this contribution is not tax deductible). [Learn more on how your contribution will be used.](#)

4. After the download is complete, open the folder. There are downloaded compressed installation files:

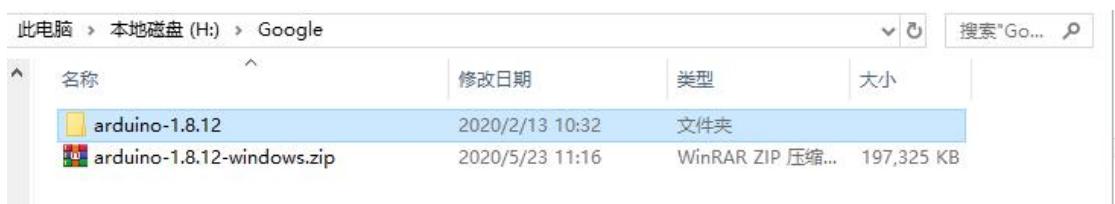

**arduino-1.8.12-windows.zip**

5. Double-click to open the file and unzip it.

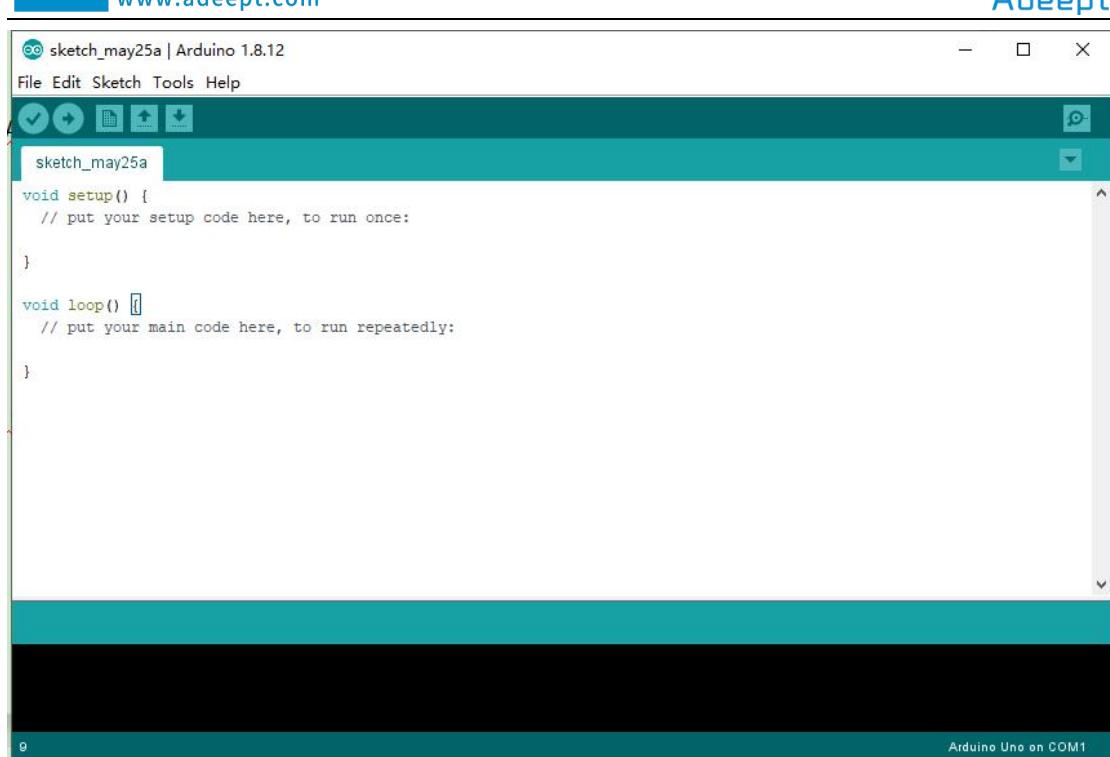

6. The file arduino-1.8.12 appears after decompression. As shown follows;

7. Open the arduino-1.8.12 folder and double-click arduino.exe to open the software.

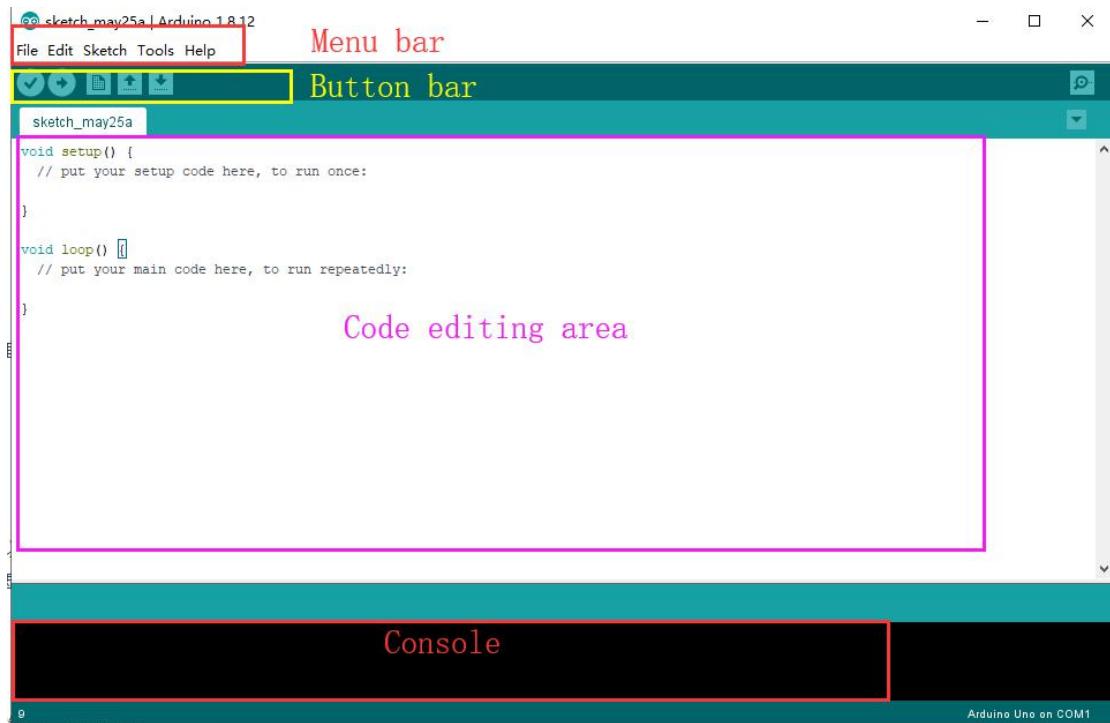

8. The interface will show as follows after the Arduino software is opened, indicating that our software has been downloaded and installed successfully.

## 4. Introduction of Arduino software interface

The following figure is the interface introduction of Arduino software

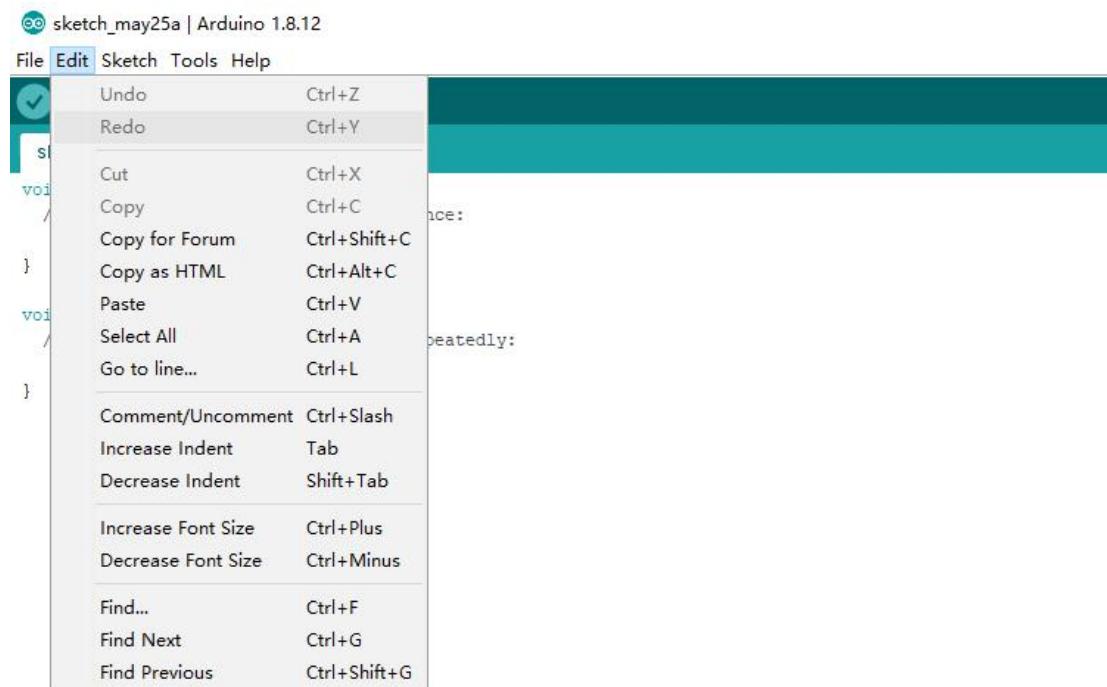

## (1)Menu bar

Menu bar contains File, Edit, Sketch, Tools and Help.

(1) "File" can operate new file, open file, save file, close file, save, etc. For the Examples, you can check the official sample program.

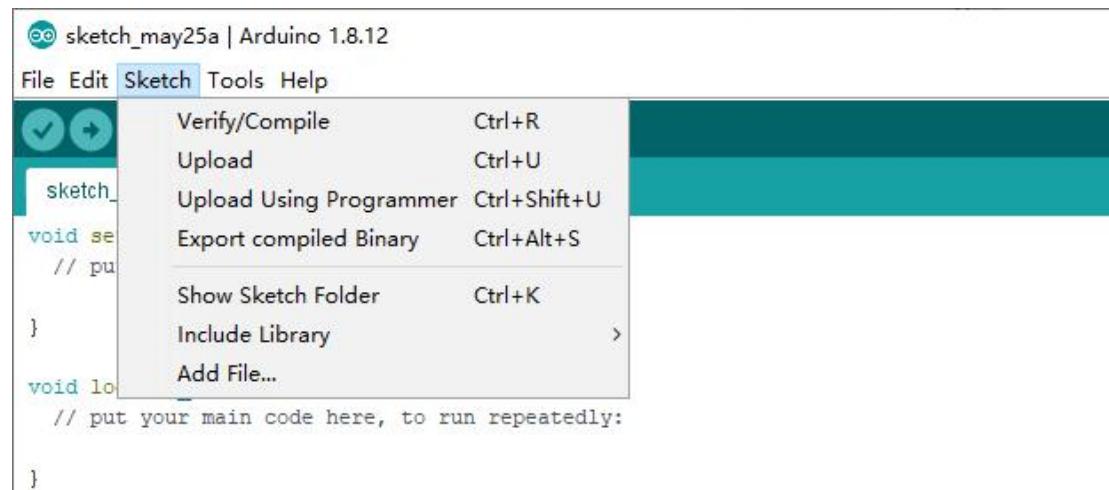

(2) "Edit" has the functions for the program code of editing, copying and pasting, commenting, indenting, searching, etc.

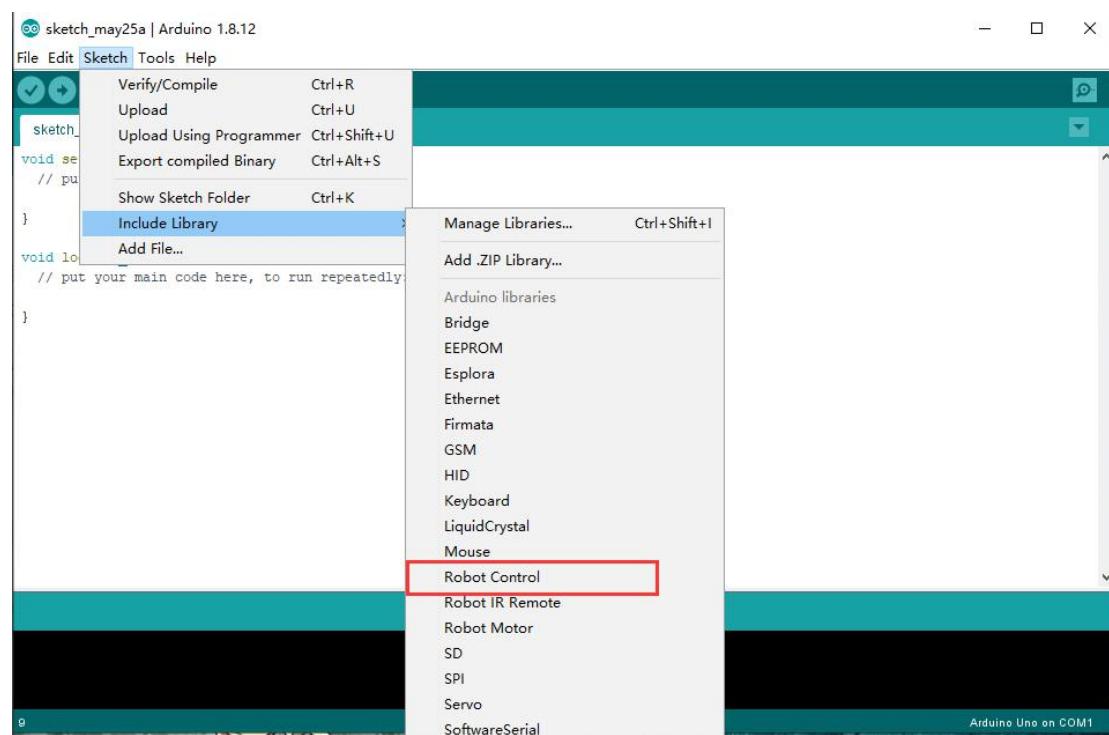

(3) Sketch can perform Verify/Compile, Upload and other operations on the

written project.

The Include Library can load the library. After selecting the library file in the list, the relevant header files are automatically added in the code editing area.

www.adeept.com

sketch\_may25a | Arduino 1.8.12

File Edit Sketch Tools Help

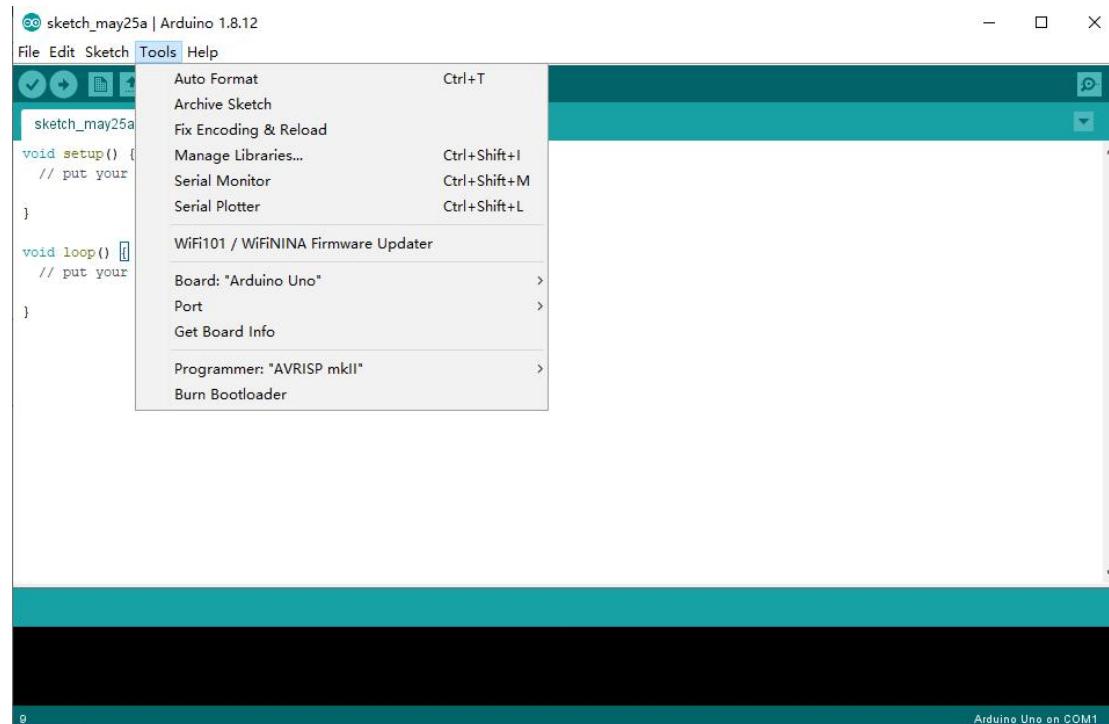

sketch\_may25a §

```
#include <ArduinoRobot.h>
#include <Arduino_LCD.h>
#include <Compass.h>
#include <EasyTransfer2.h>
#include <EEPROM_I2C.h>
#include <Fat16.h>
#include <Fat16Config.h>
#include <Fat16mainpage.h>
#include <Fat16util.h>
#include <FatStructs.h>
#include <Multiplexer.h>
#include <SdCard.h>
#include <SdInfo.h>
#include <Squawk.h>
#include <SquawkSD.h>

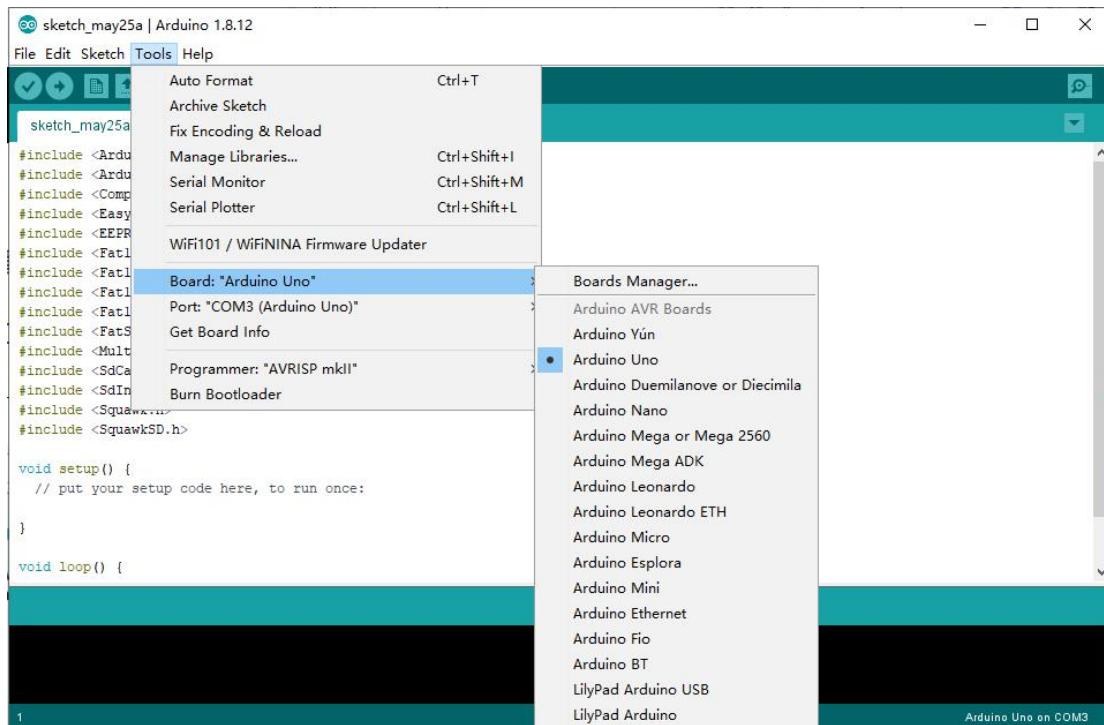

void setup() {
  // put your setup code here, to run once:
}

}
```

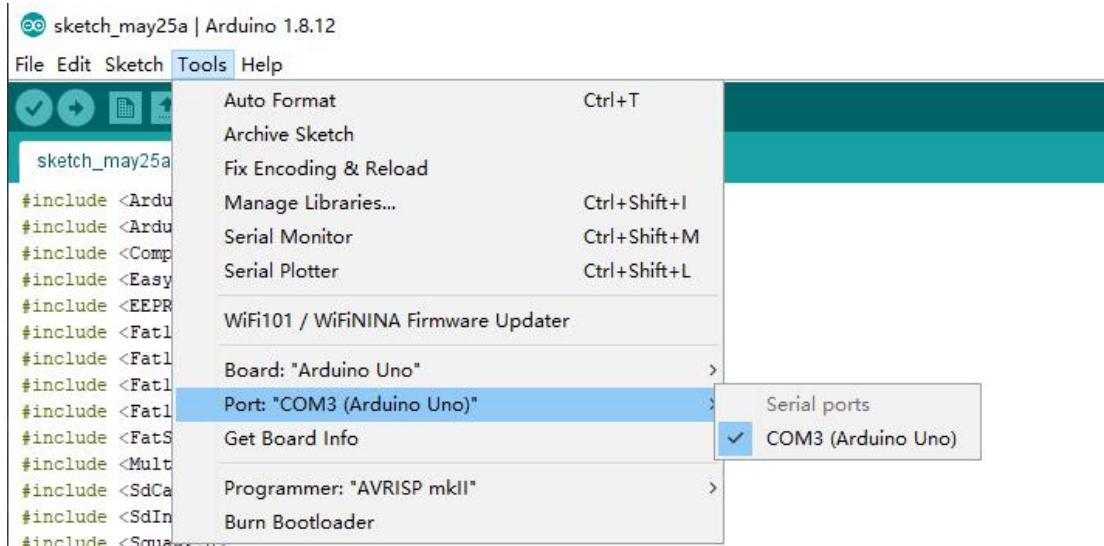

#### (4) Board and Port are often used in "Tools".

Board can choose different development boards. Our course uses Arduino Uno development board, so we need to choose Arduino Uno. The list contains many Arduino development board models. We choose the corresponding ones according to the model.

Port can set the port used by Arduino IDE to download the program, that is, the port number of the development board connected to the computer. The port display of each computer is different. When we use the Arduino Uno to connect to the computer, it displays the COM3 port number.

## (2)Button bar

Button bar includes functions of Verifying,Uploading,Building New,Opening and Saving.

(1) Verify :

Checking and compilation. This button is used to check the correctness of your "syntax" or code. If your code has any syntax errors or undefined variables, an error message will appear at the bottom of the IDE screen. At the same time, the line of error code will be marked with a red background color for easy modification. But if it is correct, you will see the message that the compilation is complete.

(2) Upload :

Download the program code to the Arduino development board. It is better to click Verify first, and then click Upload.

(3) New :

Open a new program editing window to create a new project.

(4) Open :

This button can open an existing draft file. You will use it when you need to open a file that you have downloaded or used before.

(5) Save :

Save the program file being edited.

### (3)Code editing area

The code editing area is where to write program code and code comments.

### (4)Console

The debug window will output information showing various compilation and debugging results. For example, if your code is written incorrectly, you will be prompted about what went wrong.

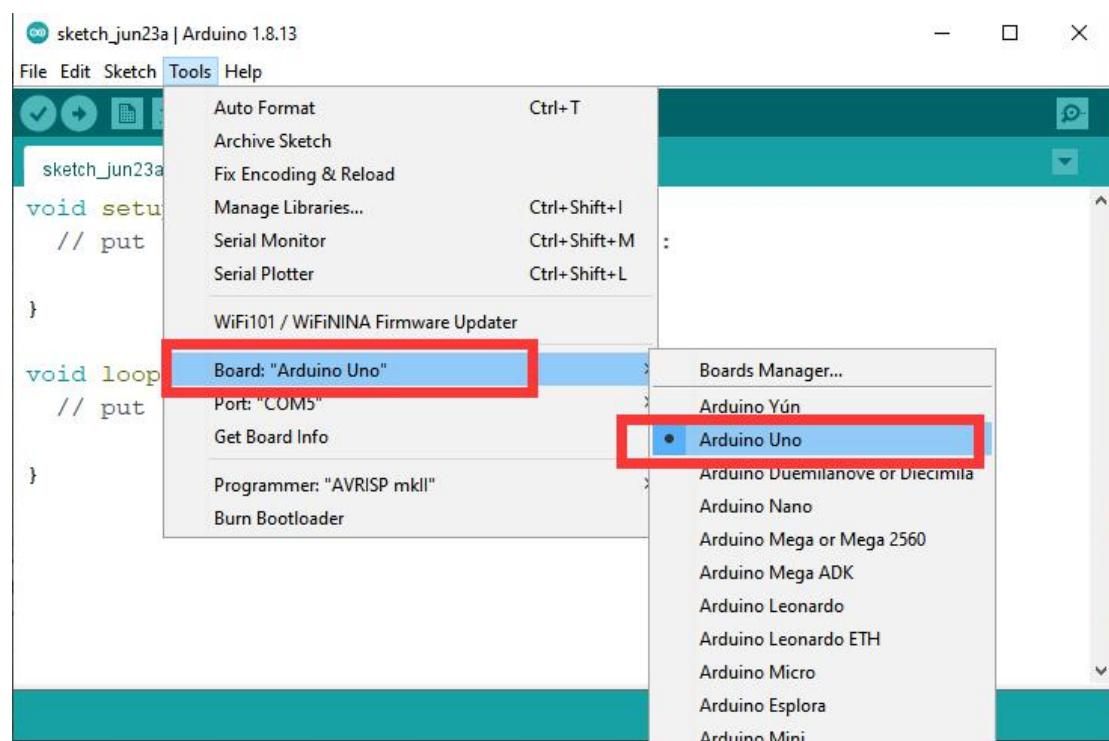

## 5. Connecting the Adeept Arm Drive Board and the computer

### (1) Connecting the Adeept Arm Drive Board and the computer

You need to use USB Cable to connect the Adeept Arm Drive Board to the computer. As shown below:

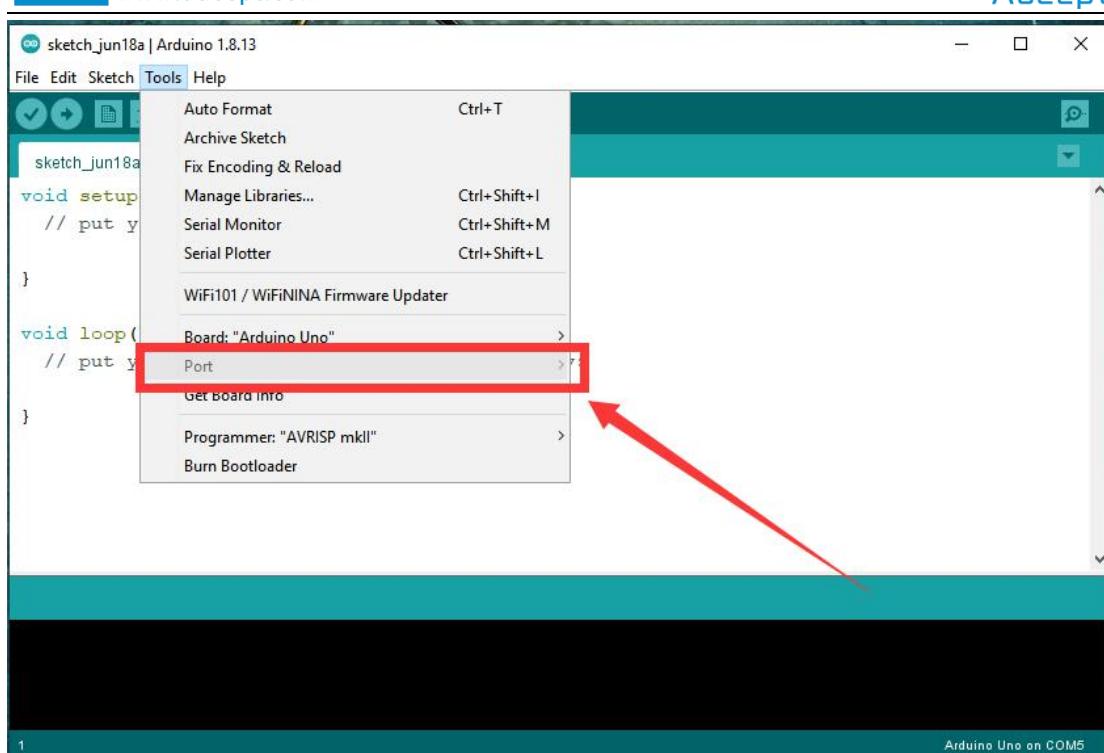

### (2) Select the Arduino Uno development board in Tools

Open Arduino IDE under Tools—>Board. Select Arduino UNO in the list.

### (3) Install CH341SER driver

1. Open the Arduino IDE, in the Port on the Tools toolbar, you will see that the serial port cannot be accessed, which means that you have not installed the serial port driver.

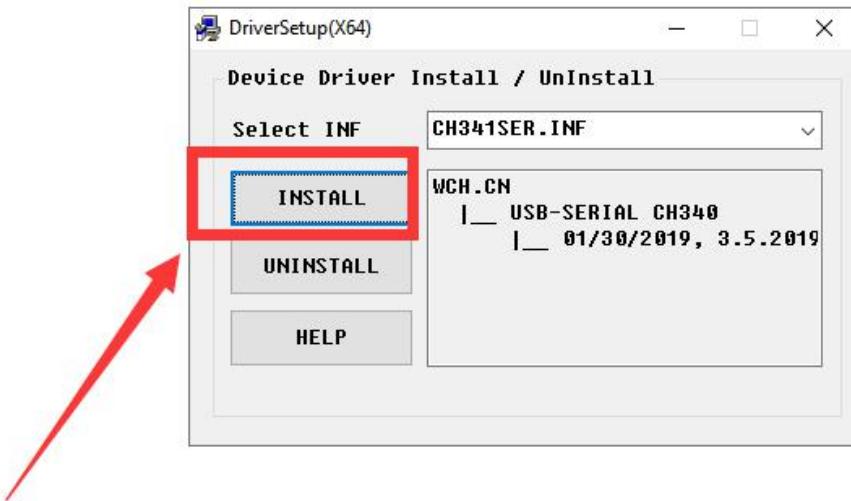

2. You need to find the user folder provided by Adeept: AdeeptRoboticArmforArduinoV3\_5, find the 01 Software Package folder, and open the Adeept driver folder. If you are using a Windows system, you can directly double-click to open CH341SER\_Windows.EXE, install corresponding driver according to the computer operating system.

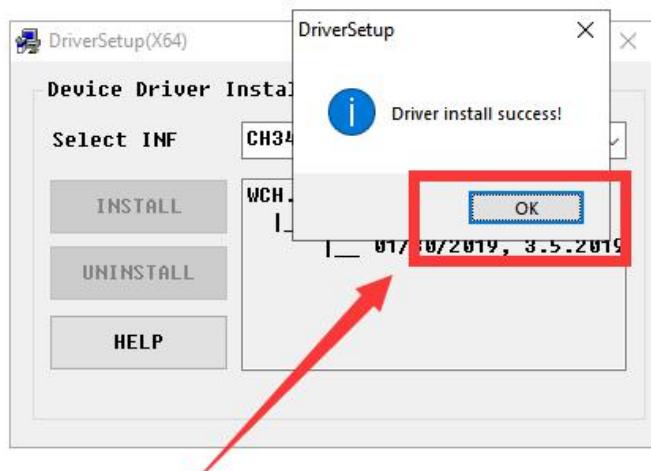

Name	Date modified	Type	Size
Adeept driver introduction.txt	6/17/2020 2:18 PM	Text Document	1 KB
CH341SER_ANDROID.ZIP	6/17/2020 2:18 PM	WinRAR ZIP 压缩...	2,360 KB
CH341SER_LINUX.ZIP	6/17/2020 2:18 PM	WinRAR ZIP 压缩...	9 KB
CH341SER_MAC.ZIP	6/17/2020 2:18 PM	WinRAR ZIP 压缩...	149 KB
CH341SER_Windows.EXE	6/17/2020 2:18 PM	Application	277 KB

3. Click INSTALL. Wait for the installation to succeed. And click OK.

Name	Date modified	Type	Size
Adeept driver introduction.txt	6/17/2020 2:18 PM	Text Document	1 KB
CH341SER_ANDROID.ZIP	6/17/2020 2:18 PM	WinRAR ZIP 压缩...	2,360 KB
CH341SER_LINUX.ZIP	6/17/2020 2:18 PM	WinRAR ZIP 压缩...	9 KB
CH341SER_MAC.ZIP	6/17/2020 2:18 PM	WinRAR ZIP 压缩...	149 KB
CH341SER_Windows.EXE	6/17/2020 2:18 PM	Application	277 KB

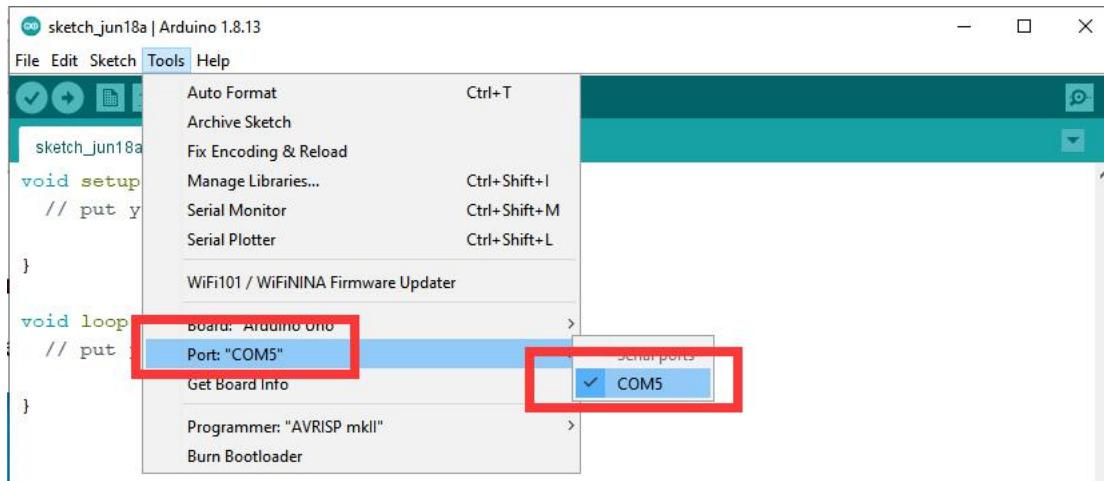

Adeept driver introduction.txt	6/17/2020 2:18 PM	Text Document	1 KB
CH341SER_ANDROID.ZIP	6/17/2020 2:18 PM	WinRAR ZIP 压缩...	2,360 KB
CH341SER_LINUX.ZIP	6/17/2020 2:18 PM	WinRAR ZIP 压缩...	9 KB
CH341SER_MAC.ZIP	6/17/2020 2:18 PM	WinRAR ZIP 压缩...	149 KB
CH341SER_Windows.EXE	6/17/2020 2:18 PM	Application	277 KB

4. Now you will find the Arduino serial port is accessible (different computer configuration has different serial port). It means that the Arduino UNO development

board has been successfully connected to the computer. You will need to pay attention to this connection step in the following course.

## 6. The solution for situation that Arduino IDE cannot be opened

When opening the Arduino IDE, you will suddenly encounter a situation that it cannot be opened.

**【Solution】**

You need to find the Arduino15 folder in the \\Users\\ASUS\\AppData\\Local\\Arduino15 directory of the C drive. As shown below:

Name	Date modified	Type	Size
cache	5/21/2020 6:35 PM	File folder	
logs	5/21/2020 6:34 PM	File folder	
library_index.json	6/10/2020 10:45 AM	JSON File	12
library_index.json.sig	6/10/2020 10:45 AM	SIG File

## 7、Download Processing

Processing is a revolutionary and forward-looking new computer language. Its concept is to introduce programming languages in the environment of electronic art and introduce the concept of electronic art to programmers. It is an extension of the Java language and supports many existing Java language architectures. It is not only much simpler in syntax, but has many intimate and user-friendly designs. Processing can be used on Windows, MAC OS X, MAC OS 9, Linux and other operating systems. The latest version is Processing 3. The work done in Processing can be used on the personal computer side or exported to the Internet in the form of Java Applets.

### How to download Processing?

1. Enter this URL with Google Chrome: <https://processing.org/>

Download Processing. Processing is available for Linux, Mac OS X, and Windows. Select your choice to download the software below.

3.5.4 (17 January 2020)

[Windows 64-bit](#) [Windows 32-bit](#) [Linux 64-bit](#) [Mac OS X](#)

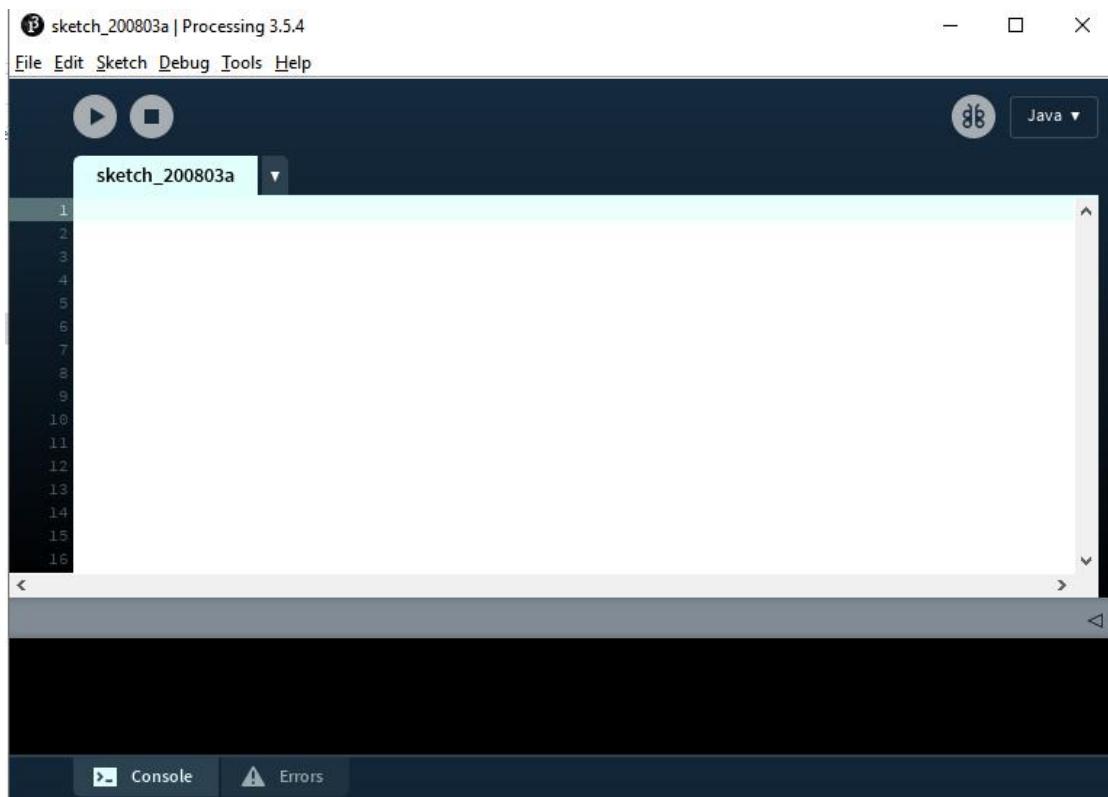

4. When finish downloading, you will get a compressed file "processing-3.5.4-windows64.zip".

5. After extracting this file, you can get the following file, just click to run processing, it can be run directly without installation.

Name	Date modified	Type	Size
core	1/17/2020 12:16 PM	File folder	
java	1/17/2020 12:17 PM	File folder	
lib	1/17/2020 12:16 PM	File folder	
modes	1/17/2020 12:16 PM	File folder	
tools	1/17/2020 12:16 PM	File folder	
<b>processing.exe</b>	1/17/2020 12:16 PM	Application	613 KB
processing-java.exe	1/17/2020 12:16 PM	Application	30 KB
revisions.txt	1/17/2020 12:16 PM	Text Document	370 KB

6. The interface is as follows after the Processing runs

7. Let's write a simple code that implements the following functions "Change the variable to create a moving line. When the line moves out of the window edge, the variable becomes 0 and the line goes back to the bottom of the screen

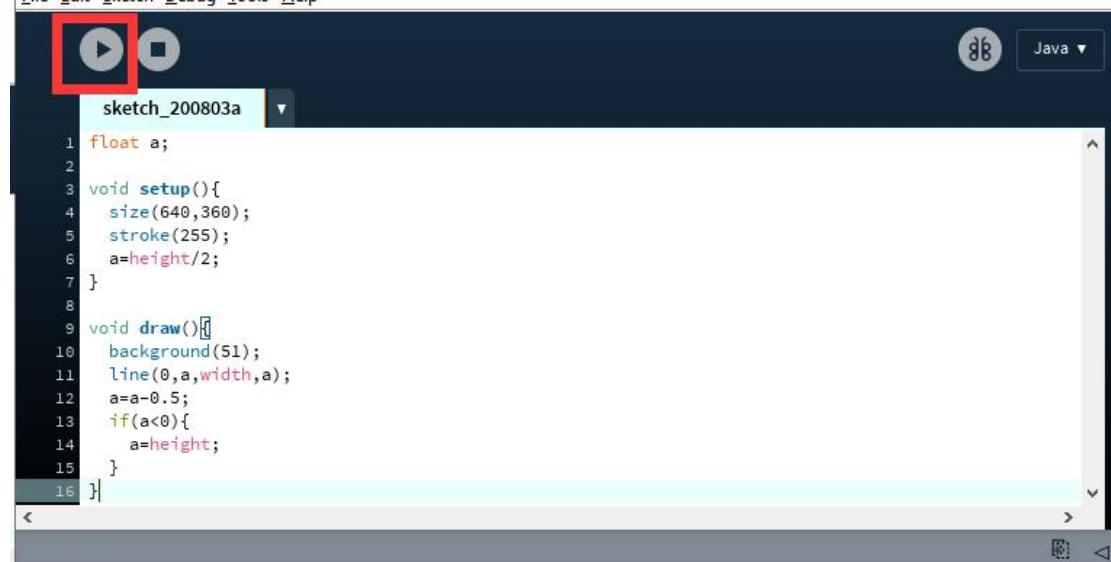

8. Click "Run".

www.adeept.com

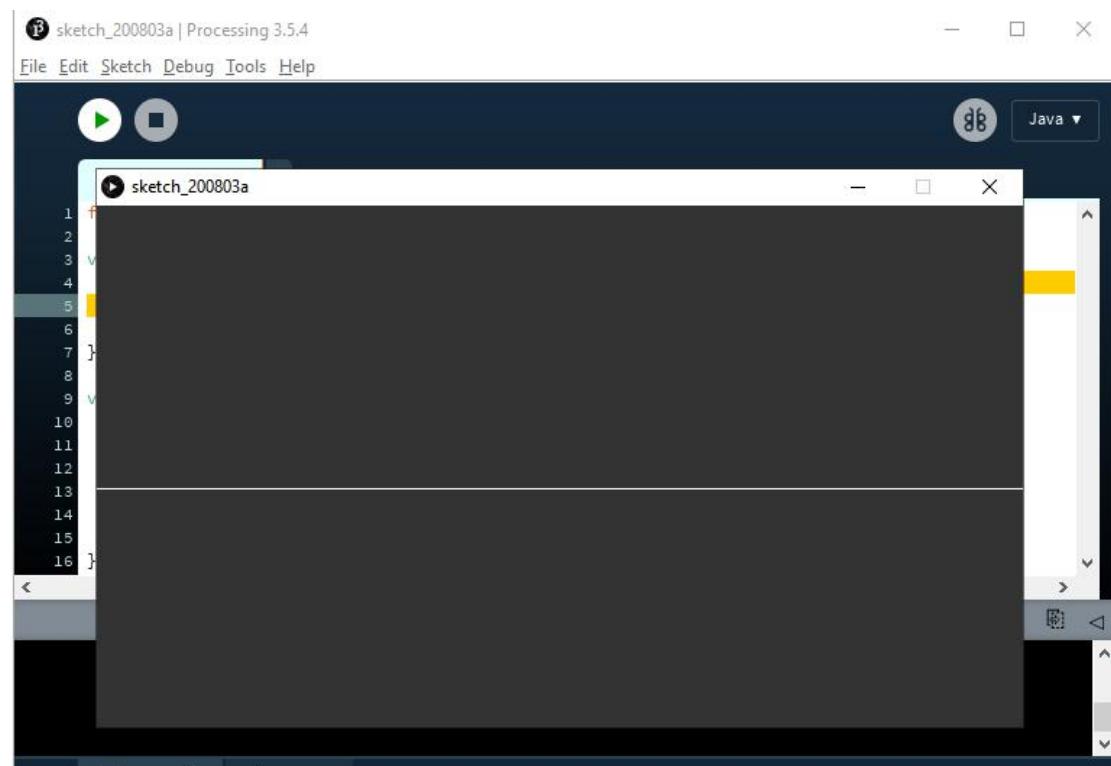

sketch\_200803a | Processing 3.5.4

File Edit Sketch Debug Tools Help

```
sketch_200803a
1 float a;
2
3 void setup(){
4     size(640,360);
5     stroke(255);
6     a=height/2;
7 }
8
9 void draw(){
10    background(51);
11    line(0,a,width,a);
12    a=a-0.5;
13    if(a<0){
14        a=height;
15    }
16 }
```

9. Running effect is as follow.

**We need to upload a piece of code to the Adeept Robotic Arm Drive Board before starting to assemble the robotic arm. Find out "00 The servo initialization code of robotic arm assembly" in the documentation we provided and upload the code from the file to Adeept Robotic Arm Drive Board.**

## 8. Configuring the "libraries" folder of the Arduino IDE

Before using Adeept Robotic Arm, you need to configure the "libraries" folder under the downloaded Arduino IDE directory.

First, you need to find the user folder provided by Adeept: AdeeptRoboticArmforArduinoV3\_5, and find the "libraries" folder under the 01 Software Package folder, as shown below:

AdeeptRoboticArmforArduinoV3_5 > 01 Software Package		
Name	Date modified	Type
Adeept driver	8/3/2020 10:43 AM	File folder
code	8/3/2020 10:43 AM	File folder
<b>libraries</b>	8/4/2020 10:03 AM	File folder

Open the "libraries" folder, as shown below:

Name	Date modified	Type	Size
Adafruit_GFX_Library	11/3/2020 10:01 AM	File folder	
Adafruit_SSD1306	11/3/2020 10:01 AM	File folder	
ArduinoJson	11/3/2020 10:01 AM	File folder	
Dht11	11/3/2020 10:44 AM	File folder	
IRremote	11/3/2020 10:45 AM	File folder	
Keypad	11/3/2020 10:45 AM	File folder	
LiquidCrystal_I2C	11/3/2020 10:30 AM	File folder	
U8glib	11/3/2020 10:01 AM	File folder	

You need to copy all files to the "libraries" under the Arduino IDE installation directory, as shown in the figure below:

Name	Date modified	Type	Size
drivers	6/16/2020 11:44 AM	File folder	
examples	6/16/2020 11:44 AM	File folder	
hardware	6/16/2020 11:44 AM	File folder	
java	6/16/2020 11:44 AM	File folder	
lib	6/16/2020 11:44 AM	File folder	
<b>libraries</b>	6/16/2020 11:44 AM	File folder	
reference	6/16/2020 11:44 AM	File folder	
tools	6/16/2020 11:44 AM	File folder	
tools-builder	6/16/2020 11:44 AM	File folder	
arduino.exe	6/16/2020 11:44 AM	Application	72 KB
arduino.l4j.ini	6/16/2020 11:44 AM	Configuration sett...	1 KB
arduino_debug.exe	6/16/2020 11:44 AM	Application	69 KB
arduino_debug.l4j.ini	6/16/2020 11:44 AM	Configuration sett...	1 KB

Paste the three folders in "libraries". As shown below:

Name	Date modified	Type
Adafruit_Circuit_Playground	7/1/2020 6:11 PM	File folder
<b>Adafruit_GFX_Library</b>	8/4/2020 10:11 AM	File folder
Adafruit_NeoPixel	7/1/2020 6:14 PM	File folder
<b>Adafruit_SSD1306</b>	8/4/2020 10:11 AM	File folder
ArduinoJson	7/7/2020 3:23 PM	File folder
Bridge	7/1/2020 6:11 PM	File folder
Dht11	7/7/2020 3:23 PM	File folder

# Lesson 1 How to Read the Data of the Potentiometer

In this lesson, we will learn how to read the data of the potentiometer and convert the data into an angle.

## 1.1 Components used in this course

Components	Quantity	Picture
Adeept Arm Drive Board	1	
Micro USB Cable	1	

## 1.2 Introduction of Potentiometer

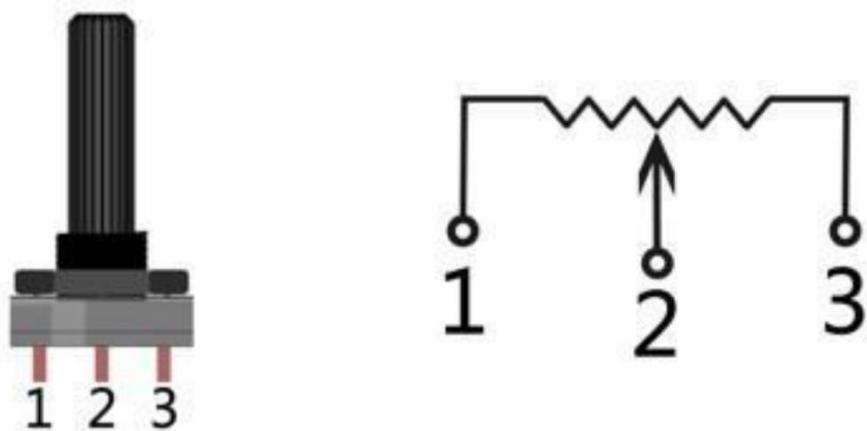

### (1) Potentiometer

The potentiometer is a resistance element with three terminals and the resistance value can be adjusted according to a certain change law, which is equivalent to a variable resistor. Because its role in the circuit is to obtain a certain relationship with the input voltage (external voltage) to output Voltage, so called potentiometer. Potentiometers can be divided into rotary potentiometers, push-pull potentiometers, straight slide potentiometers, etc. according to the adjustment method. Our course experiment uses a rotary potentiometer. Its three pins are showed as below:

The rotary potentiometer is an adjustable resistance element. It is composed of a resistor and a rotating system. When a voltage is applied between the two fixed contacts of the resistive body, the position of the contact on the resistive body is changed by the rotating system, and a voltage that has a certain relationship with the position of the moving contact can be achieved between the moving contact and the

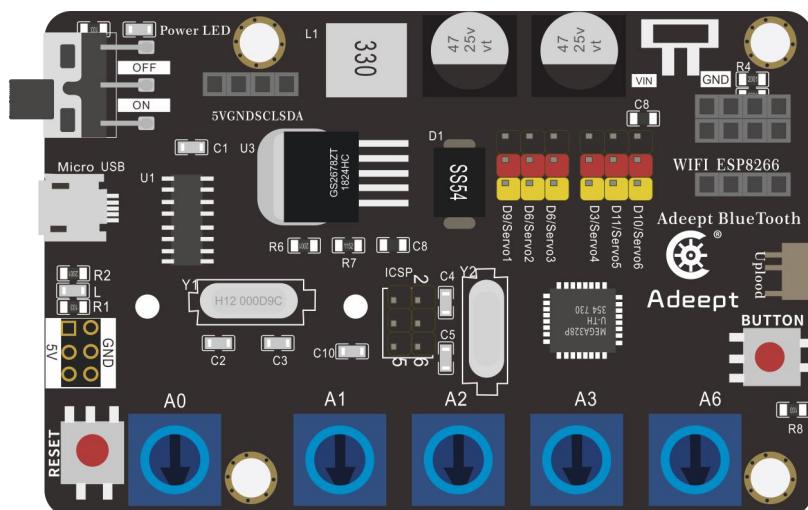

fixed contact. Potentiometer can be used to adjust the voltage and current.

Our course uses a rotary potentiometer. Its structure is as shown in the figure below. By rotating the knob, the position of pin 2 is changed, thereby changing the resistance value from pin 2 to both ends. In the experiment. Connect pin 1 and pin 3 to the GND and 5V of the development board respectively. And then read the voltage divided by the pin 2 of the potentiometer through the analog input pin A0. The range is between 0V and 5V. The analog input function of Arduino has 10-bit precision, that is, it can convert the voltage signal of 0 to 5V into an integer form of 0 to 1024.

## 1.3 Wiring diagram (Circuit diagram)

Figure as below:

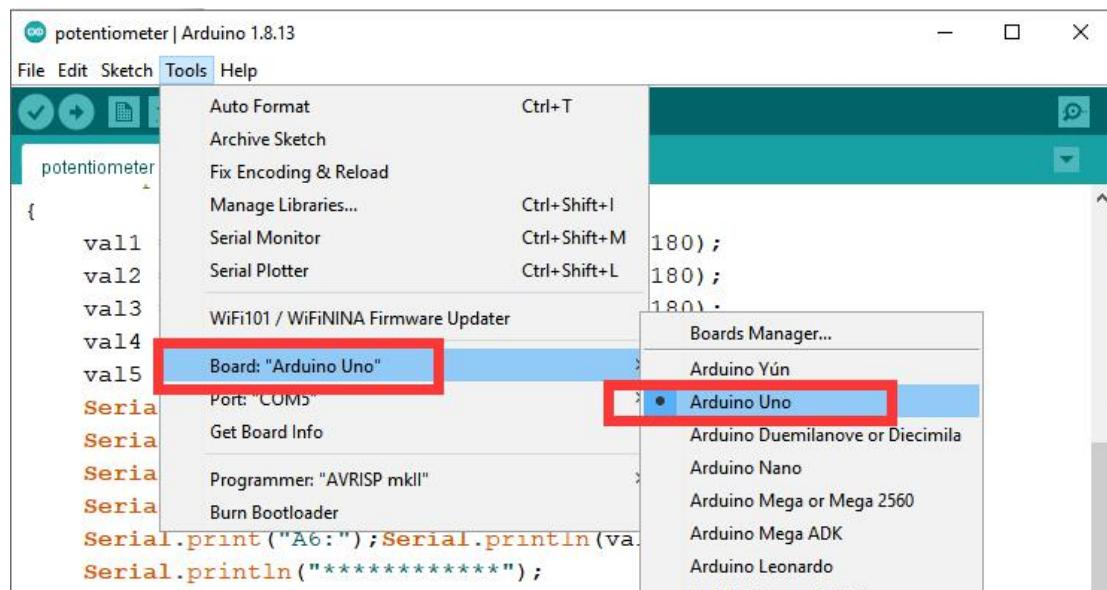

## 1.4 Reading the value of the potentiometer and converting it into an angle

### 1.4.1 Compile and run the code program of this course

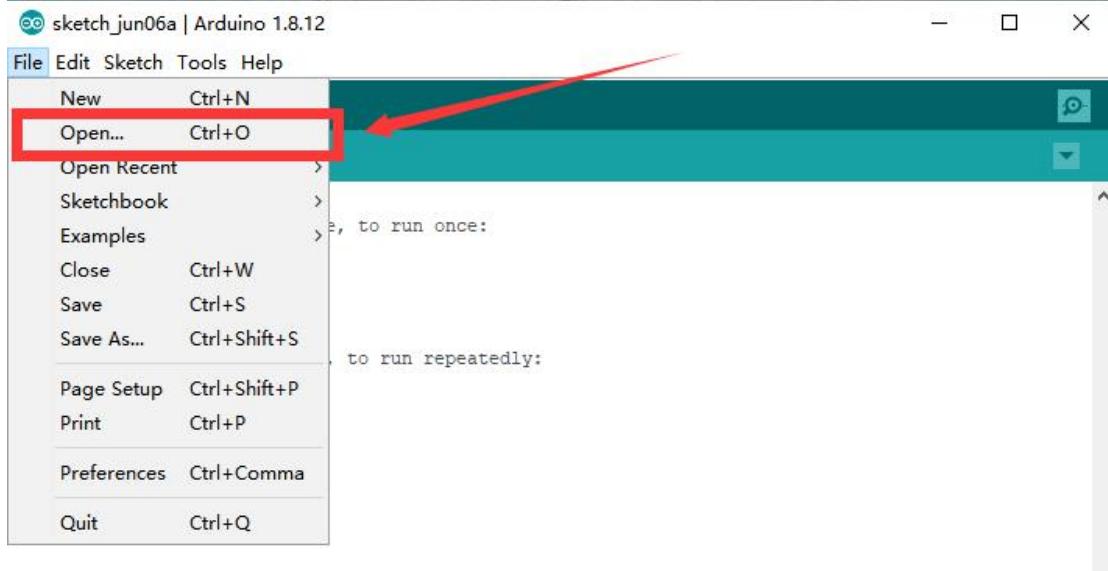

1. Open the Arduino IDE software, as shown below:

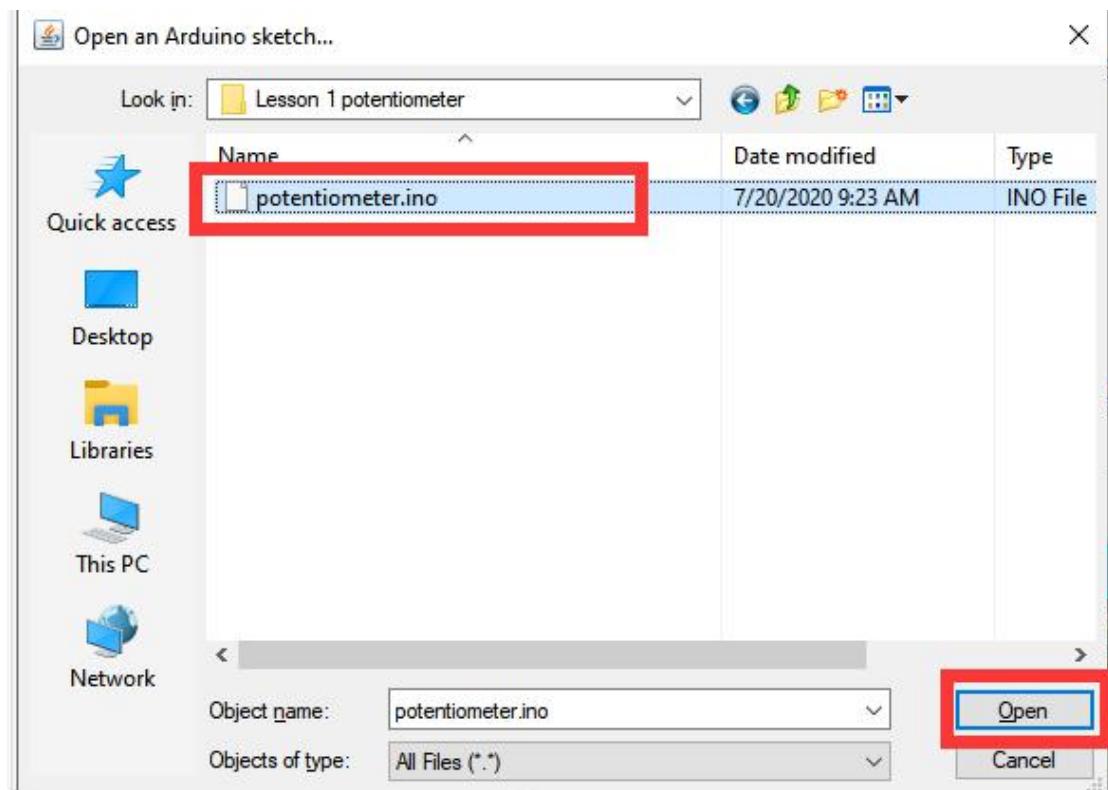

2. In the Tools toolbar, find Board and select Arduino Uno, as shown below:

3. Click Open in the File drop-down menu:

4. Find the folder AdeeptRoboticArmforArduinoV3\_5 that we provide to the user. Open the folder 02 Course Code in it. Enter the Lesson 1 potentiometer directory. Select potentiometer.ino. This file is the code program we need in this course. Then click Open.

5. After opening, click  to upload the code program to the Arduino UNO. If

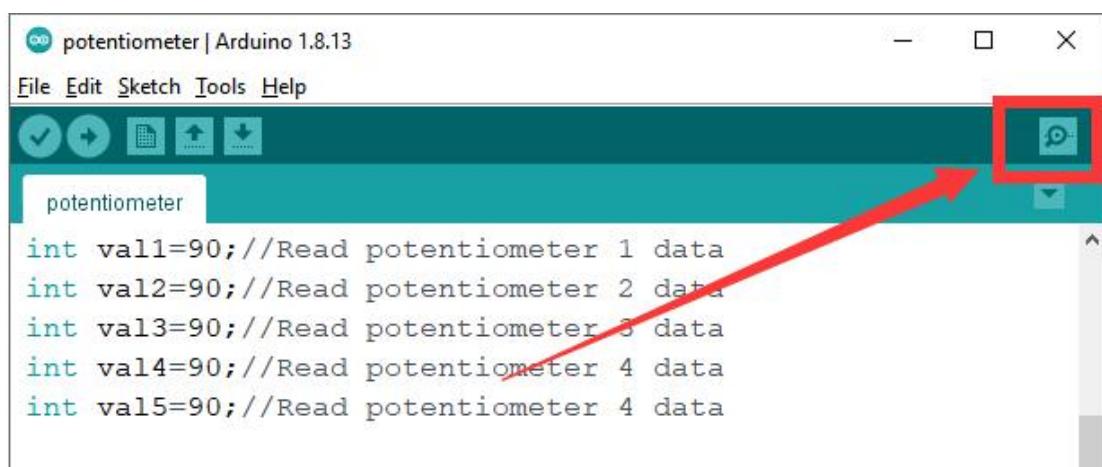

there is no error warning in the console below, it means that the Upload is successful.

```
Done uploading.

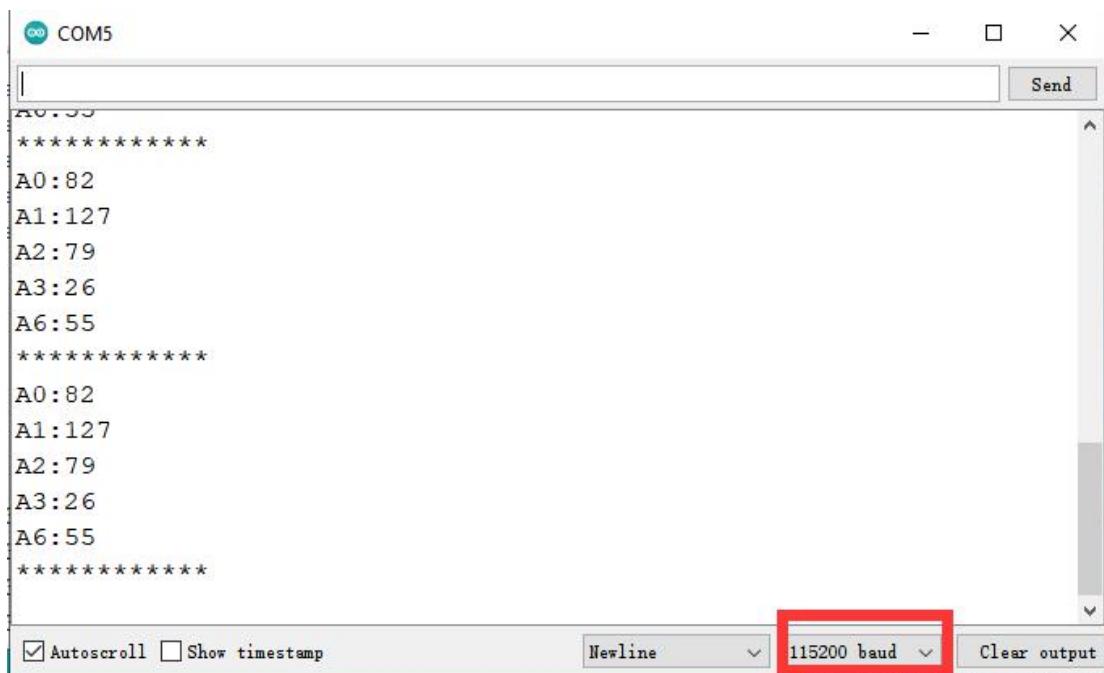

Sketch uses 924 bytes (2%) of program storage space. Maximum is 32256 bytes.
Global variables use 9 bytes (0%) of dynamic memory, leaving 2039 bytes for local variables. Maximum is 2048 bytes.

1                               Arduino Uno on COM4
```

6. After successfully running the program, we need to observe the value of the potentiometer by opening the serial monitor and click  , as shown in the figure below:

Then open the serial monitor, you need to modify the displayed bit rate and the bit rate set in the code to 115200, so that the display will not appear garbled. You can observe the data changes corresponding to each button by rotating the buttons of A0, A1, A2, A3, and A6. When the buttons of A0, A1, A2, and A3 are rotated, the data change range is from 0 to 180. The data becomes smaller when rotating clockwise, and the data becomes larger when rotating counterclockwise. When the A6 button is rotated, the data change range is 35~90. When it is rotated clockwise, the data becomes smaller, and when it is rotated counterclockwise, the data becomes larger.

### 1.4.2 Learning the code program of this lesson

Initialize potentiometers A0, A1, A2, A3, A6.

```

int val1=90;//Read potentiometer 0 data
int val2=90;//Read potentiometer 1 data
int val3=90;//Read potentiometer 2 data
int val4=90;//Read potentiometer 3 data
int val5=90;//Read potentiometer 6 data

```

Initialize the serial monitor.

```

void setup()
{
    Serial.begin(115200);
}

```

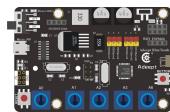

Convert the value of 1023 to 180 proportionally, and then print out the converted data to the serial monitor.

```
void loop()
{
    val1 = map(analogRead(0), 0, 1023, 0, 180);
    val2 = map(analogRead(1), 0, 1023, 0, 180);
    val3 = map(analogRead(2), 0, 1023, 0, 180);
    val4 = map(analogRead(3), 0, 1023, 0, 180);
    val5 = map(analogRead(6), 0, 1023, 35, 90);
    Serial.print("A0:");Serial.println(val1);
    Serial.print("A1:");Serial.println(val2);
    Serial.print("A2:");Serial.println(val3);
    Serial.print("A3:");Serial.println(val4);
    Serial.print("A6:");Serial.println(val5);
    Serial.println("*****");
    delay(2000);
}
```

## Lesson 2 Controlling the Servo

In this lesson, we will learn how to control the Servo.

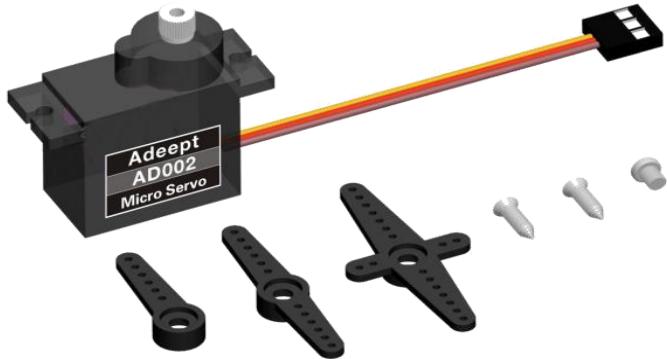

### 2.1 Components used in this course

Components	Quantity	Picture
Adeept Arm Drive Board	1	
Micro USB Cable	1	
Servo	1	

### 2.2 The introduction of the Servo

#### 2.2.1 Servo

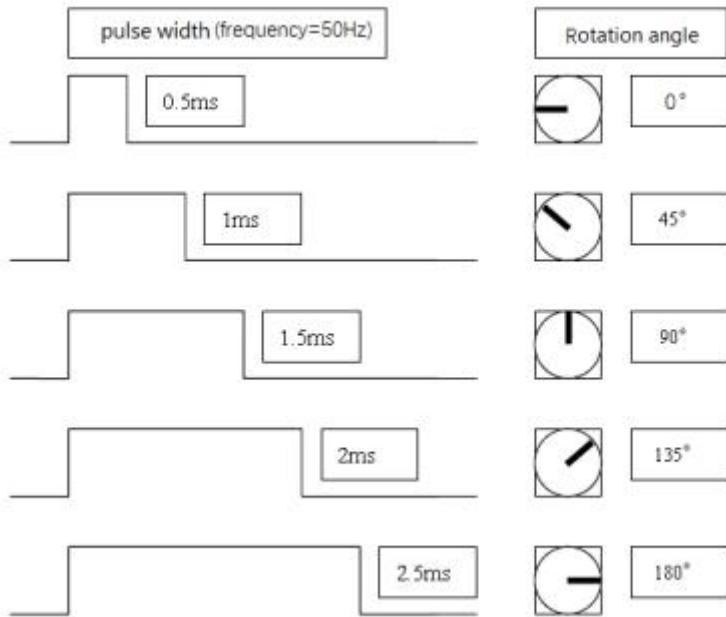

Servo motor refers to the engine that controls mechanical component operation in the servo system. It is a kind of auxiliary motor indirect transmission device. The servo motor is a gear motor that can rotate only 180 degrees. It is controlled by sending pulses from the microcontroller. These pulses tell the server where to move. The servo motor system includes housing, circuit board, non-core motor, gearing and position detection. Servo motor is shown in the figure:

## 2.2.2 The working principle of the Servo

The servo mechanism is an automatic control system that enables the object's position, orientation, state and other output controlled quantities to follow arbitrary changes in the input target (or given value). The servo mainly depends on Pulsefor location. Basically, it can be understood that the servo motor receives an impulse and rotates the angle corresponding to the impulse to realize displacement. Because the servo motor itself has the function of sending out pulses, the servo motor rotates every time at an angle, and a corresponding number of pulses will be sent out. In this way, the pulses received by the servo motor form a response, or a closed loop. In this way, the system will know how many pulses are sent to the servo motor and how many pulses are received. In this way, it is possible to precisely control the rotation of the motor, thereby achieving precise positioning.

Adeept Arm Drive Board sends a PWM signal to a servomotor, which is then processed by an IC on the circuit board to calculate the rotation direction of the drive motor, which is then transmitted through a reduction gear to the swing arm. At the same time, the position detector returns a position signal to determine whether the set position has been reached or not.

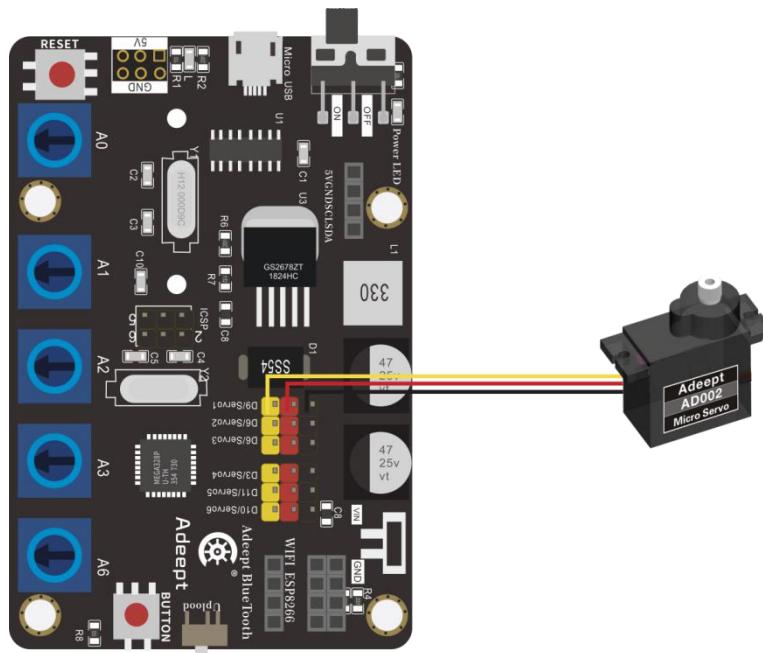

### 2.2.3 The principle of write() function

In the program, we use the write() function to control the rotation of the servo. For standard servos, the write() function will rotate the servo axis to the corresponding angular position. For the continuous rotation type of servo, the write() function can set the rotation speed of the servo (0 indicates that the servo rotates at full speed in one direction, 180 indicates that the servo rotates at full speed in another direction, and 90 indicates that the servo is stationary. The servo which is used this time is a standard servo.

## 2.3 Wiring diagram (Circuit diagram)

Connect Servo to the servo port on the Adeept Arm Drive Board, as shown below:

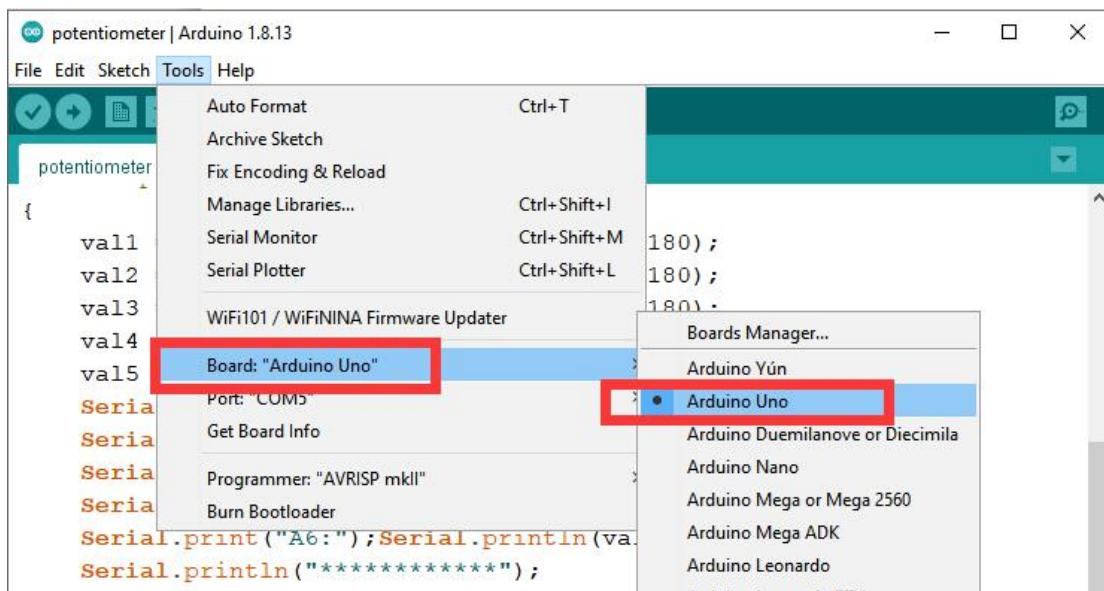

## 2.4 How to control Servo

### 2.4.1 Compile and run the code program of this course

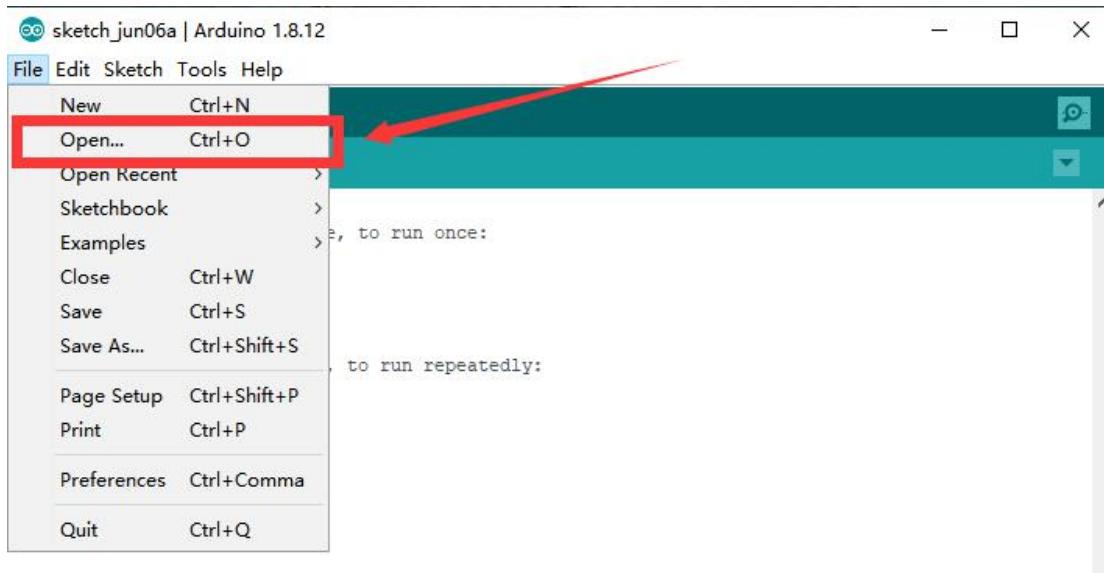

1. Open the Arduino IDE software, as shown below:

2. In the Tools toolbar, find Board and select Arduino Uno, as shown below:

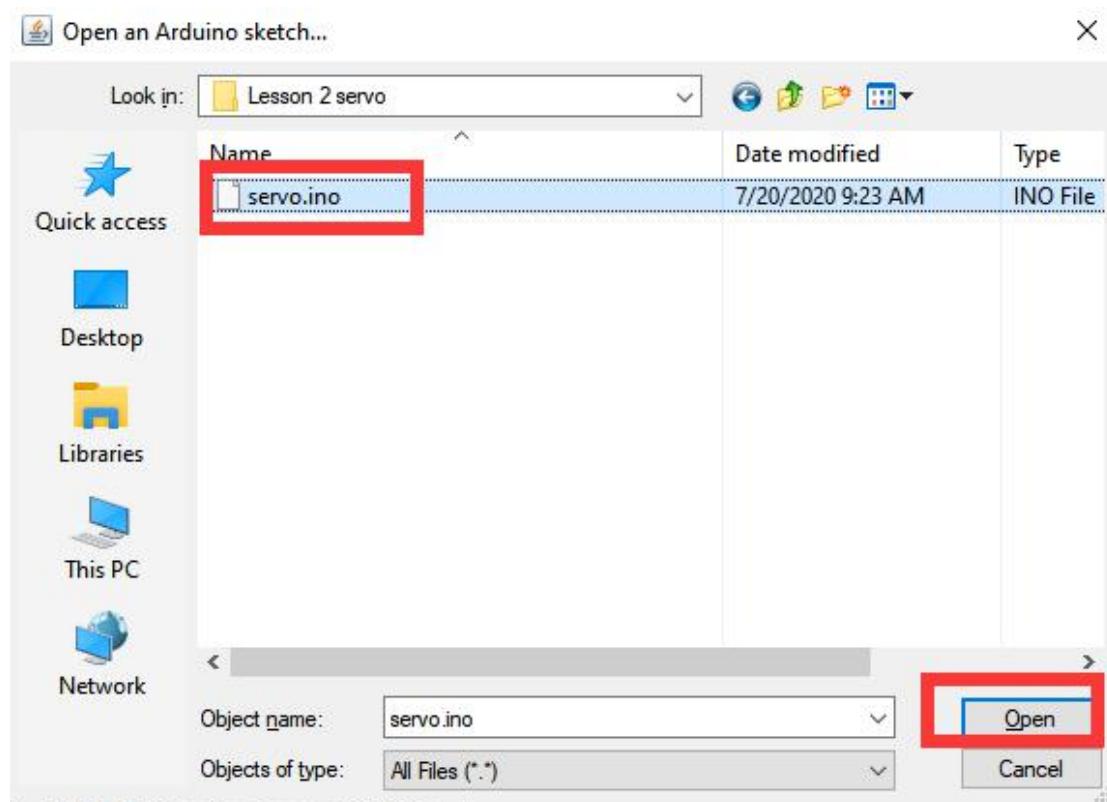

3. Click Open in the File drop-down menu:

4. Find the folder AdeeptRoboticArmforArduinoV3\_5 that we provide to the user.

Open the folder 02 Course Code in it. Enter the Lesson 2 servo directory. Select

servo.ino. This file is the code program we need in this course. Then click Open.

5. After opening, click  to upload the code program to the Arduino UNO. If there is no error warning in the console below, it means that the Upload is successful.

```
Done uploading.

Sketch uses 924 bytes (2%) of program storage space. Maximum is 32256 bytes.
Global variables use 9 bytes (0%) of dynamic memory, leaving 2039 bytes for local variables. Maximum is 2048 bytes.

1                               Arduino Uno on COM4
```

6. After successfully running the program, you will observe the movement of the servo.

#### 2.4.2 Learning the code program of this lesson

Create servo object to control a servo.

```
Servo myservo; //create servo object to control a servo
```

In the setup() function, attach the servo on pin 9 to servo object; back to 0 degrees;

wait for a second.

```
void setup()
{
    myservo.attach(9); //attaches the servo on pin 9 to servo object
    myservo.write(0); //back to 0 degrees
    delay(1000); //wait for a second
}
```

In the loop() function, respectively control Servo to turn to different angles.

```
void loop()
{
    myservo.write(180); //goes to 180 degrees
    delay(2000); //wait for a second

    myservo.write(90); //goes to 90 degrees
    delay(2000); //wait for a second.33

    myservo.write(0); //goes to 0 degrees |
    delay(2000); //wait for a second.33
}
```

## Lesson 3 Displaying Text on the OLED Screen

In this lesson, we will learn how to display text on the OLED screen.

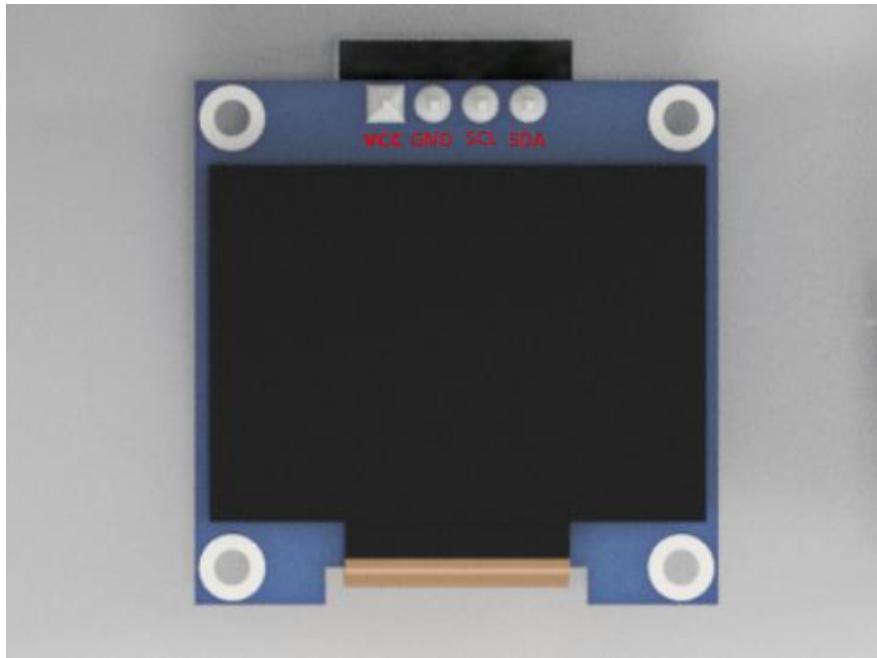

### 3.1 Components used in this course

Components	Quantity	Picture
Adeept Arm Drive Board	1	
Micro USB Cable	1	
OLED screen	1	

### 3.2 Introduction of OLED Screen

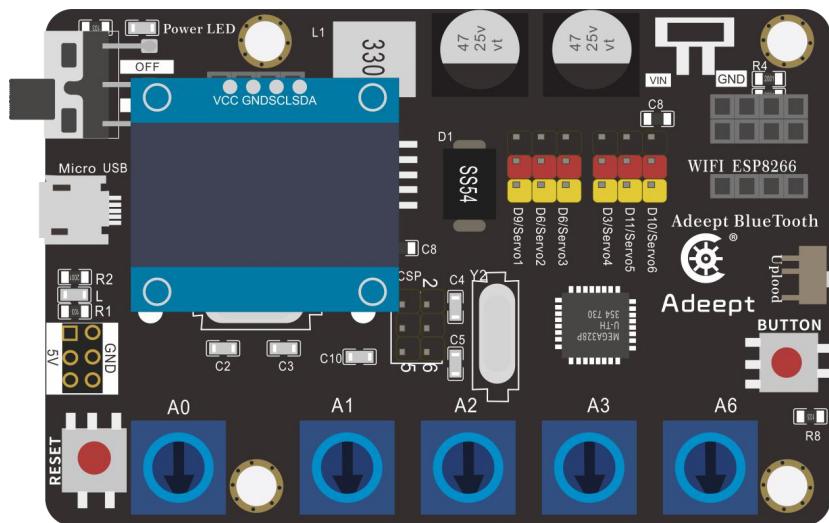

OLED (Organic Light-Emitting Diode), also known as organic electric laser display, organic light emitting semiconductor (Organic Electroluminescence Display, OLED). OLED is a kind of current-type organic light-emitting device, which produces light by the injection and recombination of carriers, and the luminous intensity is proportional to the injected current. The Alter robot uses an OLED screen to display the expressions or some parameters of the robot. OLED Screen is a commonly used module on robot products. Due to the black non-luminous feature of OLED Screen, this type of screen has extremely high contrast. Even if the ambient light is strong, you can see the information on the OLED Screen clearly, and the power consumption is relatively low.

When using the OLED Screen, you need to connect it to the OLED interface on the Adeept Arm Drive Board.

### 3.3 Wiring diagram (Circuit diagram)

You need to connect it to the OLED interface on the Adeept Arm Drive Board. As shown below:

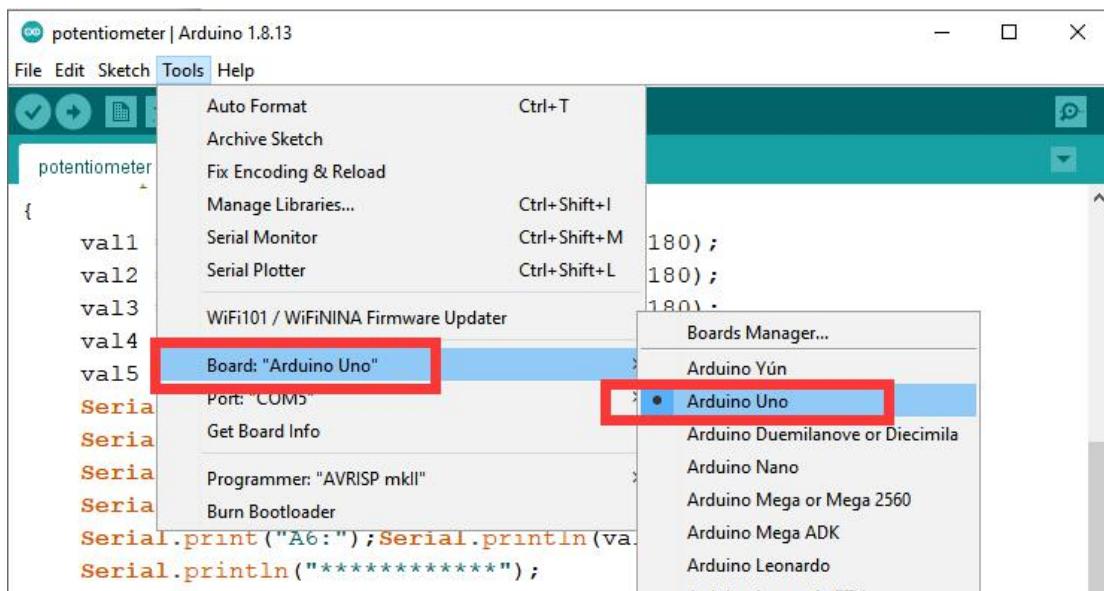

### 3.4 How to display text on the OLED screen

#### 3.4.1 Compile and run the code program of this course

1. Open the Arduino IDE software, as shown below:

2. In the Tools toolbar, find Board and select Arduino Uno, as shown below:

3. Click Open in the File drop-down menu:

4. Find the folder AdeeptRoboticArmforArduinoV3\_5 that we provide to the user.

Open the folder 02 Course Code in it. Enter the Lesson 3 OLED directory. Select

OLED.ino. This file is the code program we need in this course. Then click Open.

5.After opening, click  to upload the code program to the Arduino UNO. If there is no error warning in the console below, it means that the Upload is successful.

```
Done uploading.

Sketch uses 924 bytes (2%) of program storage space. Maximum is 32256 bytes.
Global variables use 9 bytes (0%) of dynamic memory, leaving 2039 bytes for local variables. Maximum is 2048 bytes.

1
Arduino Uno on COM4
```

6. After successfully running the program, you will observe that text will be displayed on the OLED screen.

### 3.4.2 Learning the code program of this lesson

After the above practical operation, you must be very curious to know how we use C language to program on the Adeept Arm Drive Board to display text on the OLED screen. Below we will introduce how the main code program is implemented.

First, in the setup() function, set the display color of the font to white.

```
void setup() {
    display.begin(SSD1306_SWITCHCAPVCC, 0x3C);
    display.setTextColor(WHITE); //Sets the font display color
    display.clearDisplay(); //cls
}
```

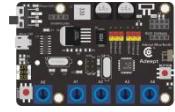

In the loop() function, set the display font size with setTextSize(1); setCursor(30,30) sets the position of the text displayed on the OLED screen, and print("TEST") prints out the text information that needs to be displayed.

```
void loop() {
    //Set the font size
    display.setTextSize(1);
    //Set the display location
    display.setCursor(50,50);
    //String displayed
    display.print("TEST");
    //Began to show
    display.display();
}
```

## Lesson 4 Saving Data with EEPROM

In this lesson, we will learn how to save data with EEPROM.

### 4.1 Components used in this course

Components	Quantity	Picture
Adeept Arm Drive Board	1	
Micro USB Cable	1	

### 4.2 About EEPROM

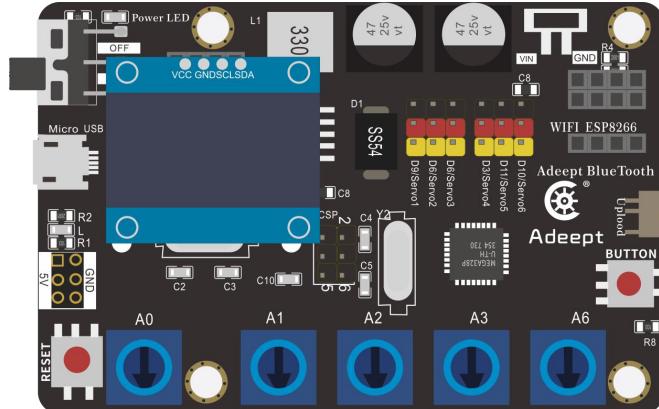

EEPROM (Electrically Erasable Programmable Read Only Memory) refers to electrically erasable programmable read only memory. It is a memory chip that does not lose data after power failure. EEPROM can erase existing information on a computer or special equipment and reprogram it. It is generally used in plug and play.

The Adeept Arm Drive Board has its own EEPROM, and its memory size is 1K.

Arduino IDE comes with EEPROM usage method. The Arduino library has prepared EEPROM library for us. You can directly call EEPROM.h in the code when you are using the EEPROM library. And then use the write() and read() methods to operate the EEPROM.

### 4.3 Wiring diagram (Circuit diagram)

You need to connect it to the OLED interface on the Adeept Arm Drive Board. As shown below:

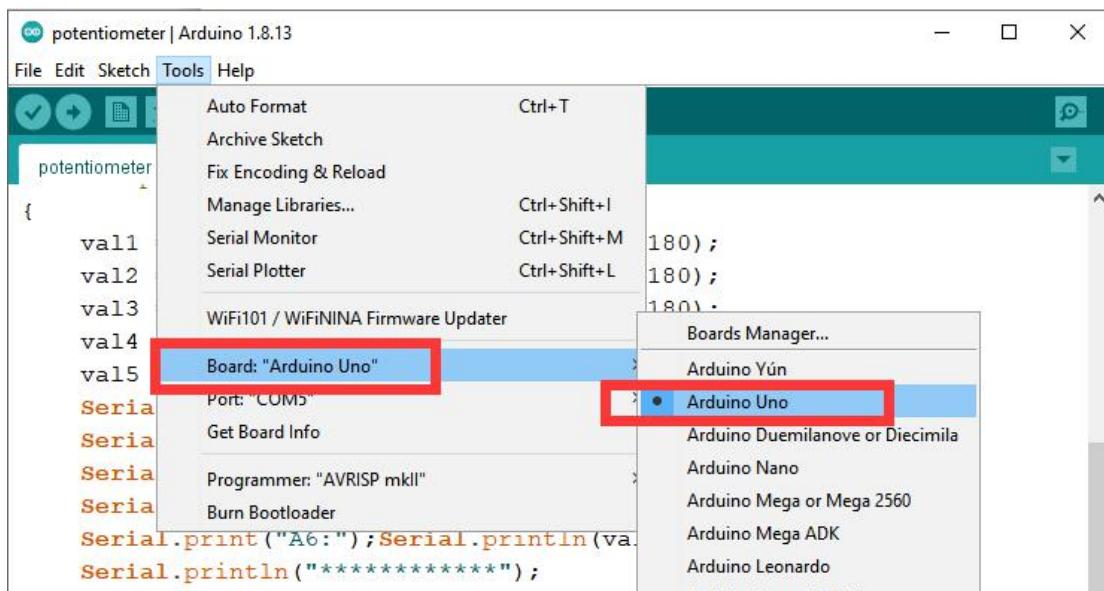

## 4.4 How to use EEPROM to save data

### 4.4.1 Compile and run the code program of this course

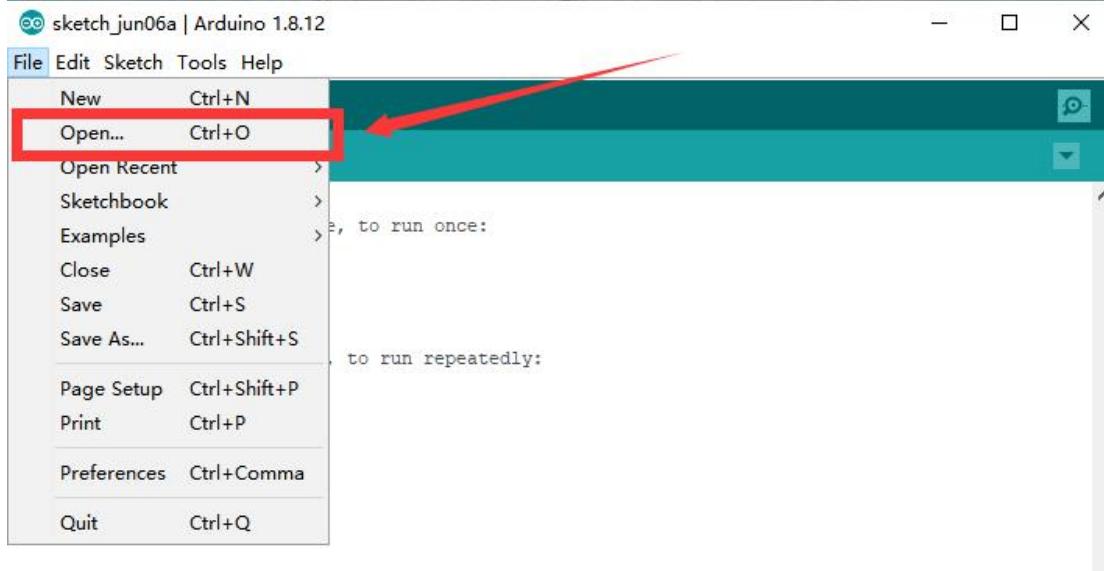

1. Open the Arduino IDE software, as shown below:

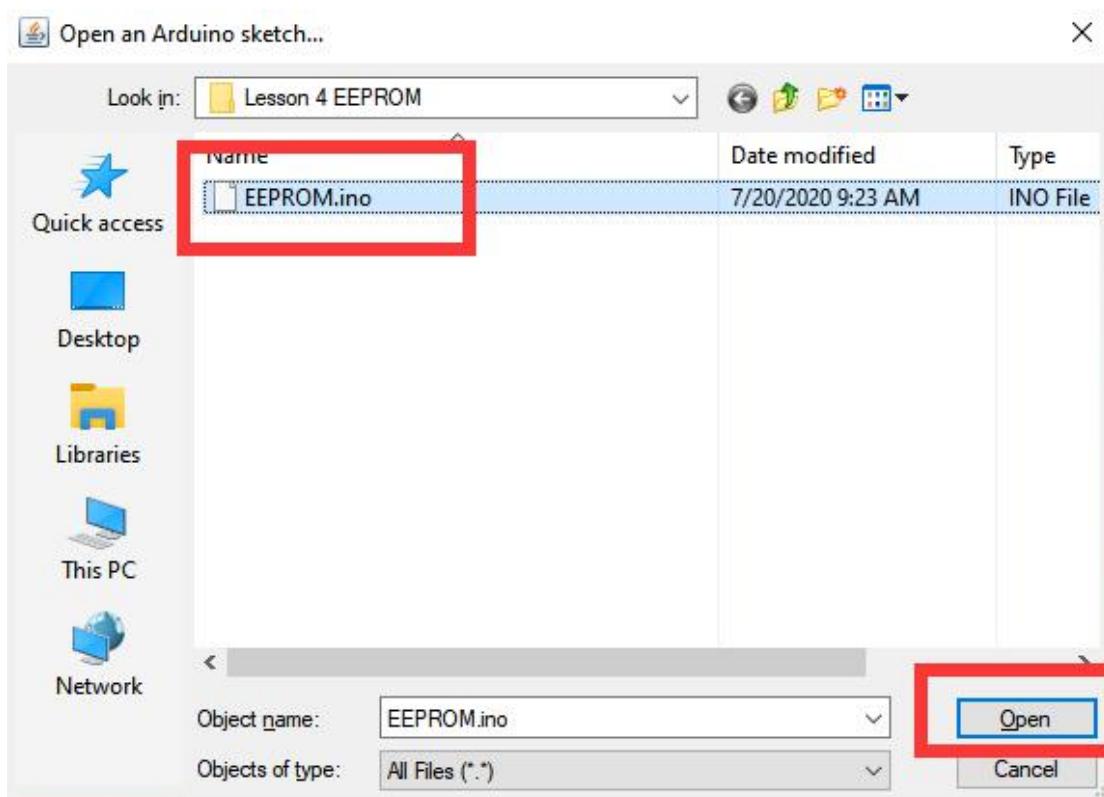

2. In the Tools toolbar, find Board and select Arduino Uno, as shown below:

3. Click Open in the File drop-down menu:

4. Find the folder AdeeptRoboticArmforArduinoV3\_5 that we provide to the user. Open the folder 02 Course Code in it. Enter the Lesson 4 EEPROM directory. Select EEPROM.ino. This file is the code program we need in this course. Then click Open.

5. After opening, click  to upload the code program to the Arduino UNO. If there is no error warning in the console below, it means that the Upload is successful.

```

Done uploading.

Sketch uses 924 bytes (2%) of program storage space. Maximum is 32256 bytes.
Global variables use 9 bytes (0%) of dynamic memory, leaving 2039 bytes for local variables. Maximum is 2048 bytes.

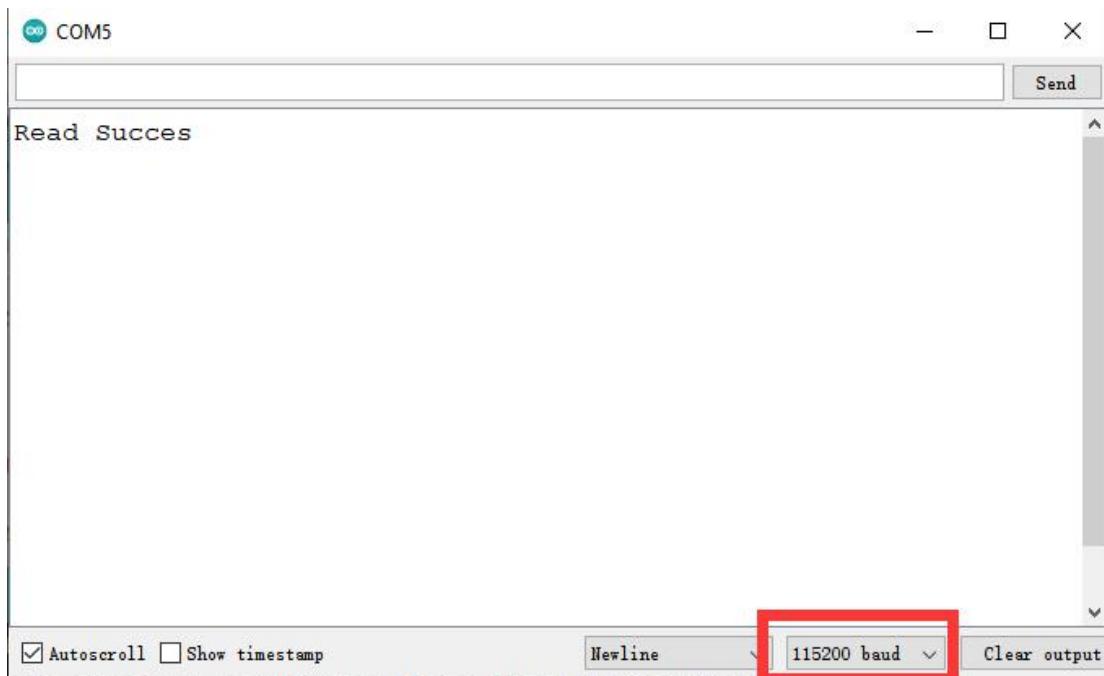

1
Arduino Uno on COM4

```

6. After successfully running the program, we need to observe the value of the potentiometer by opening the serial monitor and click  , as shown in the figure below:

You will see the returned information in the serial monitor: Read Success, indicating that the data has been saved successfully.

#### 4.4.2 Learning the code program of this lesson

After the above practical operation, you must be very curious to know how we use C language to program on the Adeept Arm Drive Board to save data with EEPROM. Below we will introduce how the main code program is implemented.

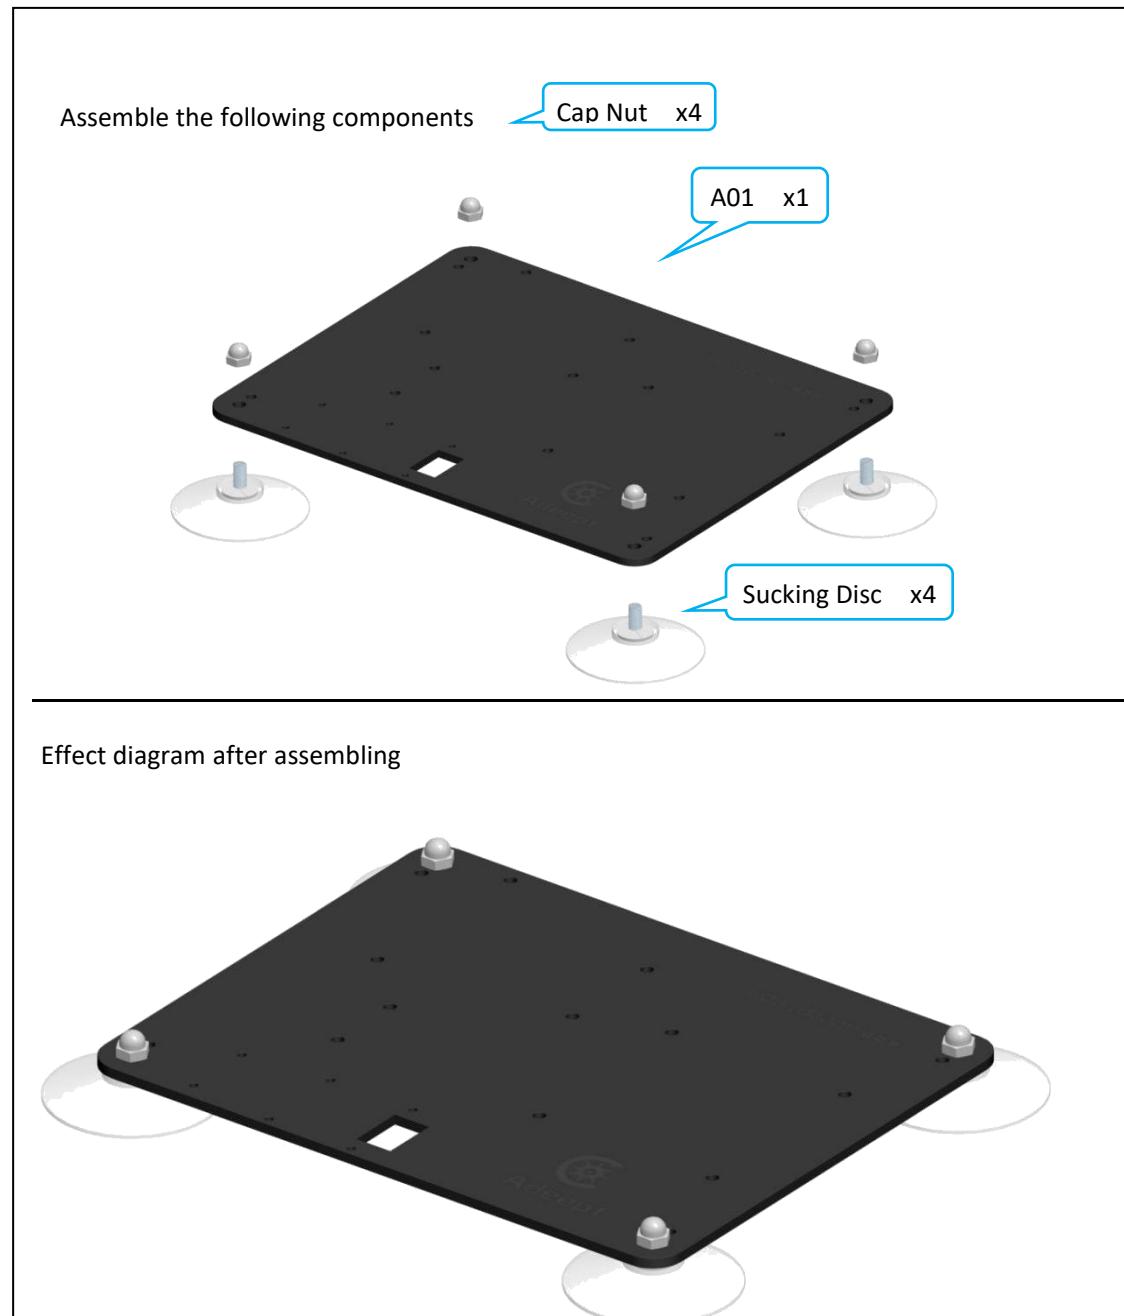

In the setup() function, first initialize the serial monitor, EEPROM.read(5) reads the data, and judges by if, if the read data is 2, then it is saved successfully.

```
void setup()
{
    Serial.begin(115200);
    a = EEPROM.read(5);
    if(a == 2)
    {
        Serial.println("Read Succes");
    }
    else
    {
        Serial.println("Read Failed");
        EEPROM.write(5, 2);
    }
}
```

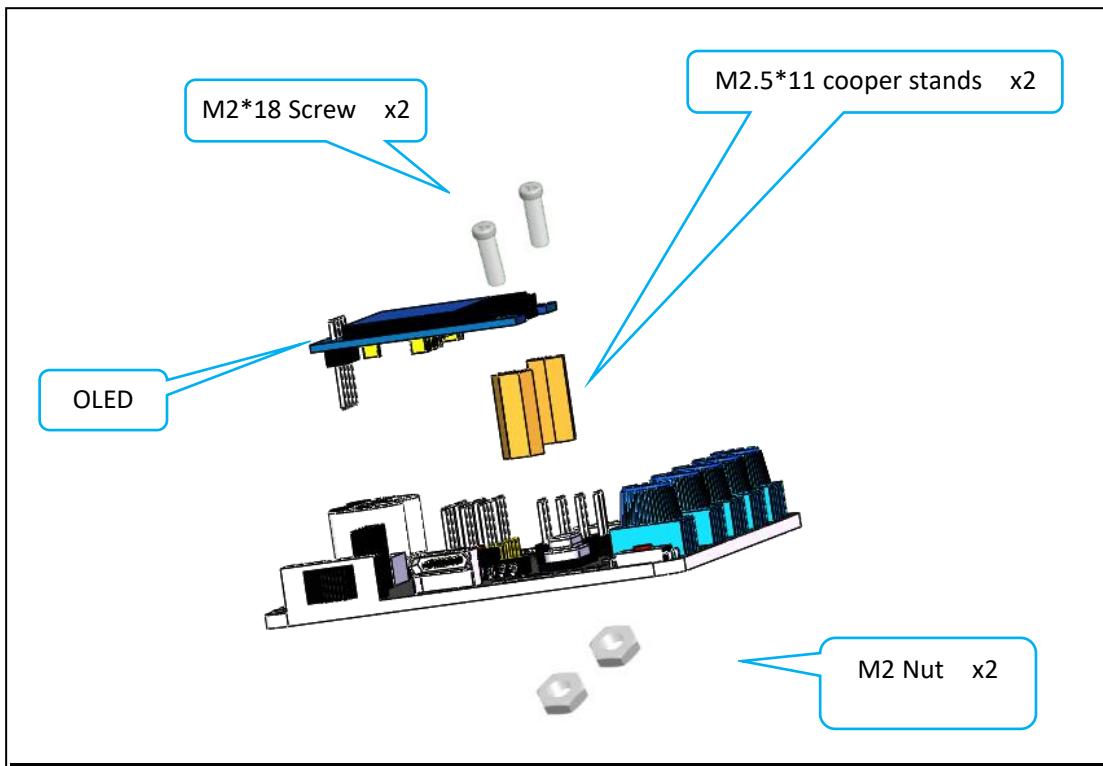

## Lesson 5 How to Assemble the Robotic Arm

### 5.1 Pedestal Assembly

1. Fix four Sucking Discs on the four corners of A01.

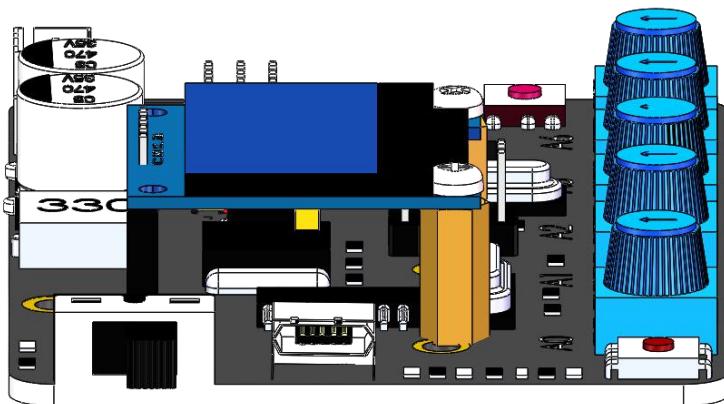

## 2.Fix OLED to drive

Effect diagram after assembling

Oled should be correct with the robot Arm drive Hat connection, the screen should be placed in the driver board

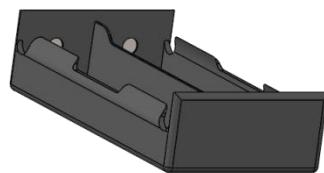

## 3.Fix 18650x2 Battery Holder to A01.

Assemble the following components

M3\*10 Countersunk  
Head Screw x2

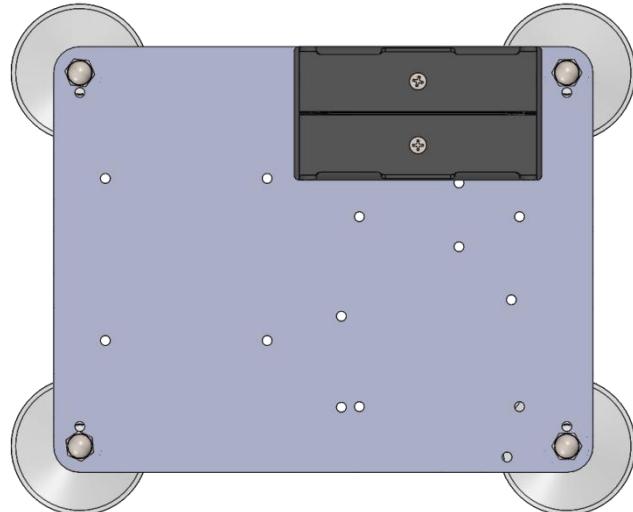

The wires of 18650x2  
Battery Holder are  
near inside.

18650x2 Battery  
Holder x1

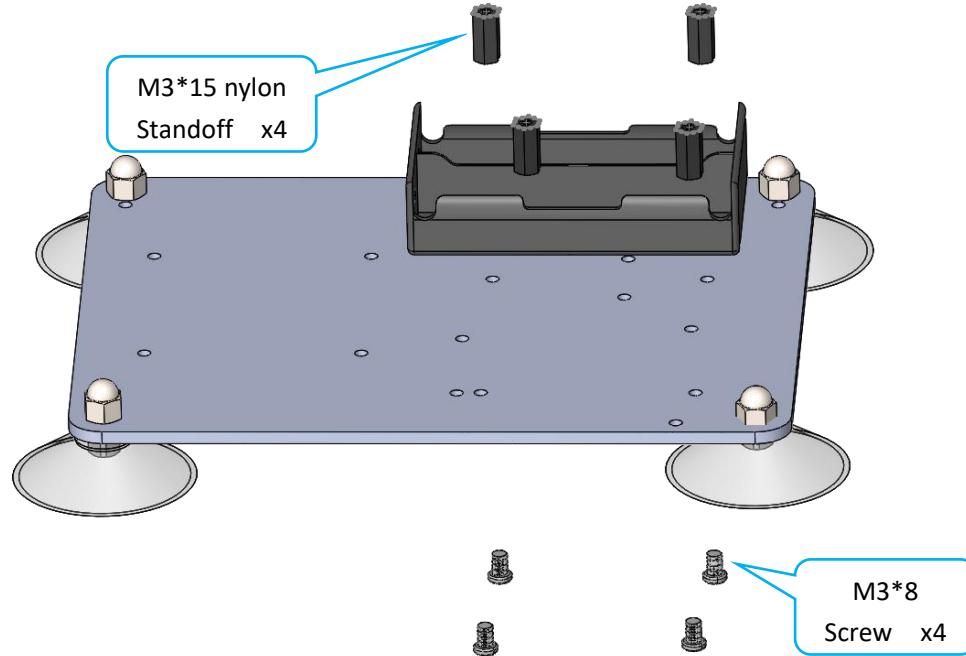

M3 Nut x2

Effect diagram after assembling

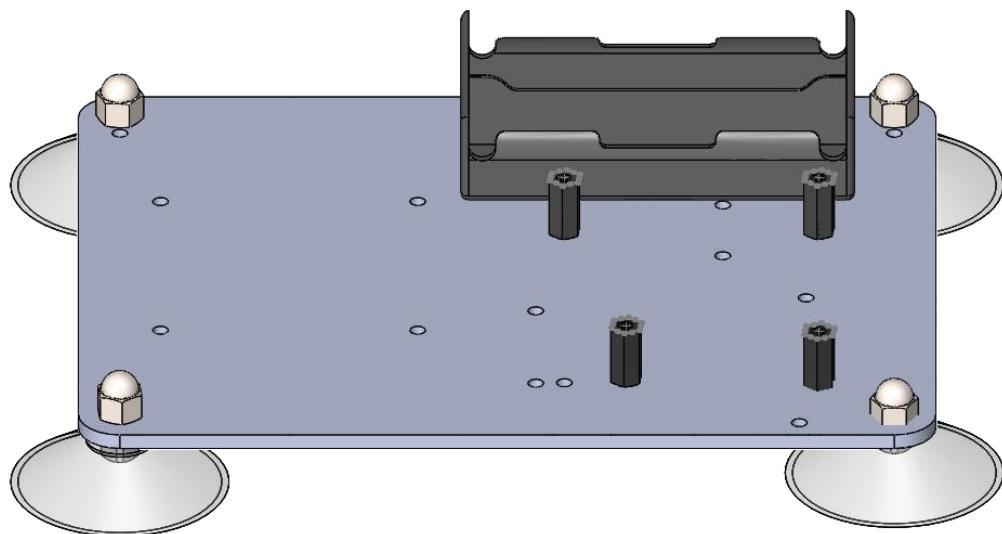

## 4.Fix four M3\*6 Copper Standoffs to A01.

Assemble the following components

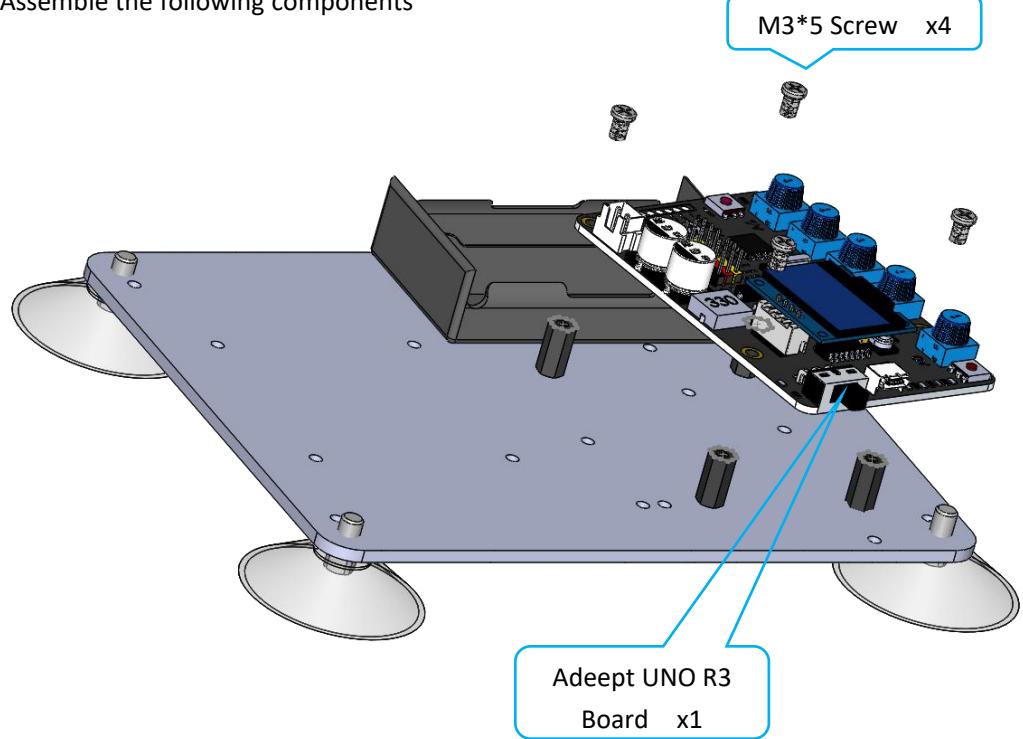

Effect diagram after assembling

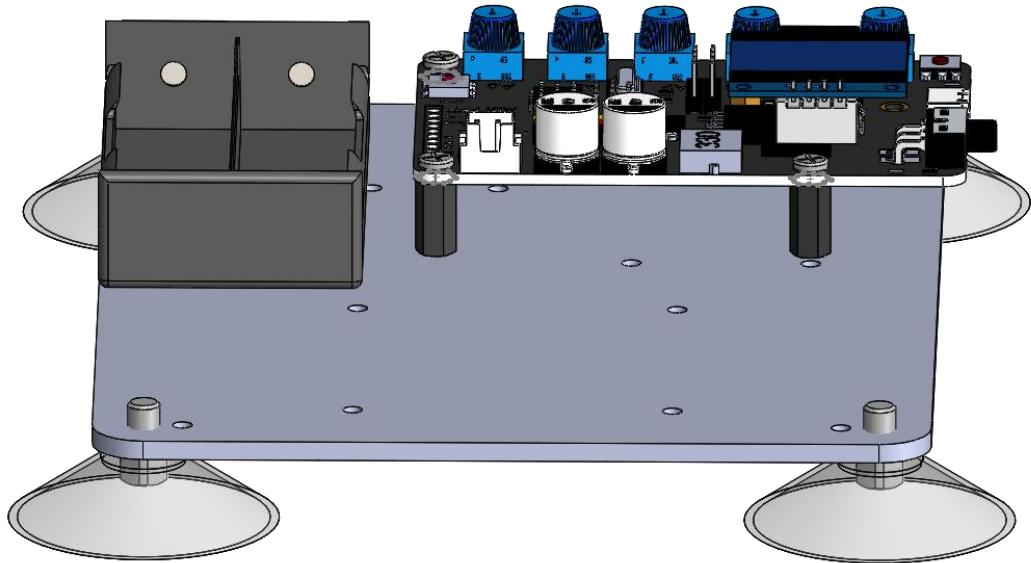

### 5. Fix Adeept UNO R3 Board to M3\*6 Copper Standoff.

Assemble the following components

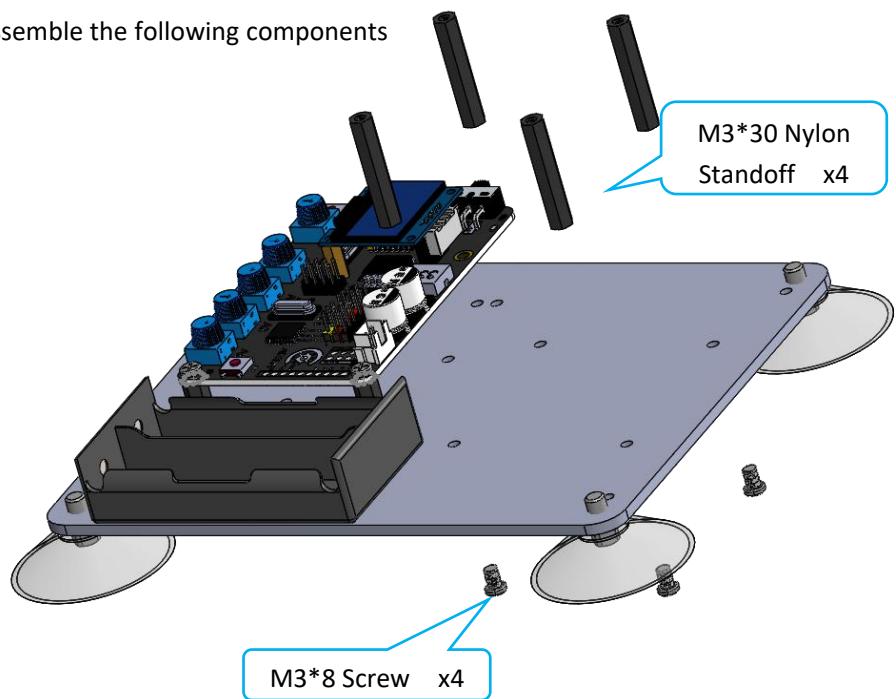

Effect diagram after assembling

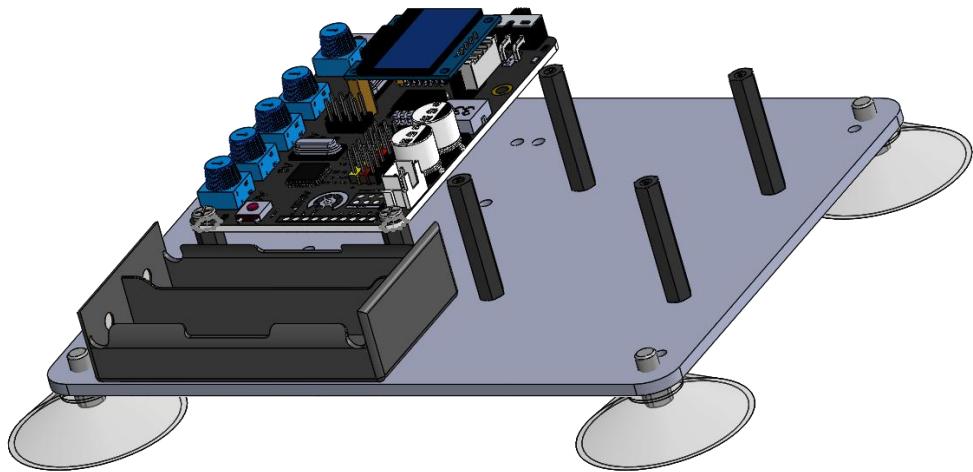

### 6. Fix four M3\*30 Nylon Standoffs to A01.

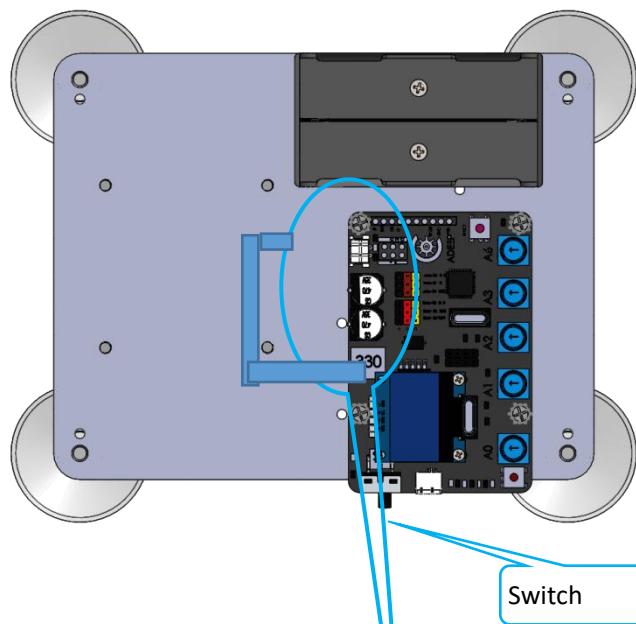

Assemble the following components

Effect diagram after assembling

Connect the 18650x2 Battery Holder to Adeept Arm Drive Board.

The anode (red wire) of the 18650x2 Battery Holder connects to the VCC interface. The negative (black wire) connects to the GND interface. And the switch is turned off.

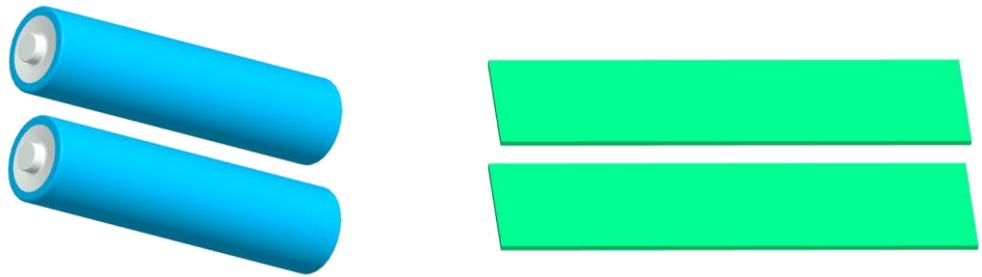

Once the circuit is connected, load your 18650 battery into 18650x2 Battery Holder and turn on the switch on the Adeept Arm Drive Board. At this point, the servo will automatically rotate to the initial state, then turn off the power and remove each servo.

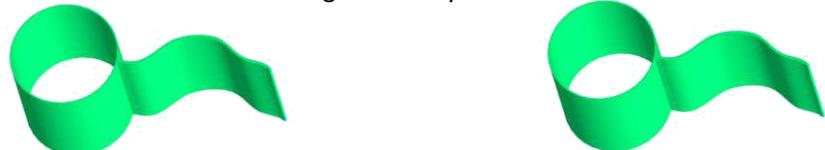

In the subsequent installation processes, before fixing the servo to the rocker arm with screws, do not rotate the rotary shaft of the servo. Otherwise, you need to follow this step again to debug the servo.

## 5.1.2 Install and Remove Batteries

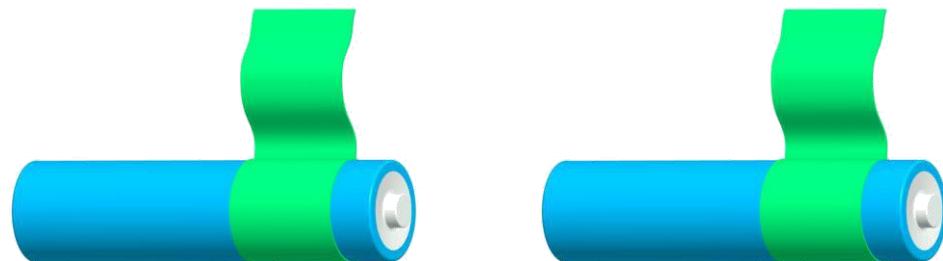

Take out 2 ribbons and 2 batteries.

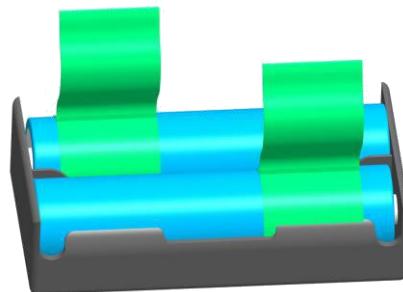

Roll one end of the ribbon to let through a battery and fix.

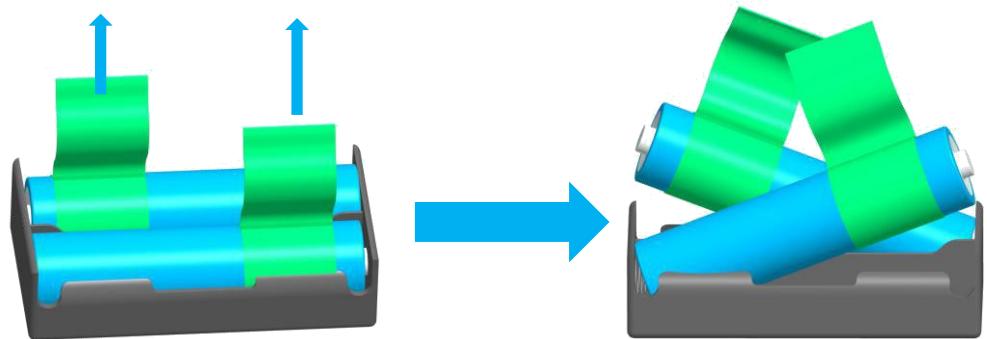

Insert the batteries into the rings-ribbon closer to the anode.

Install the batteries into the holder based on the pole.

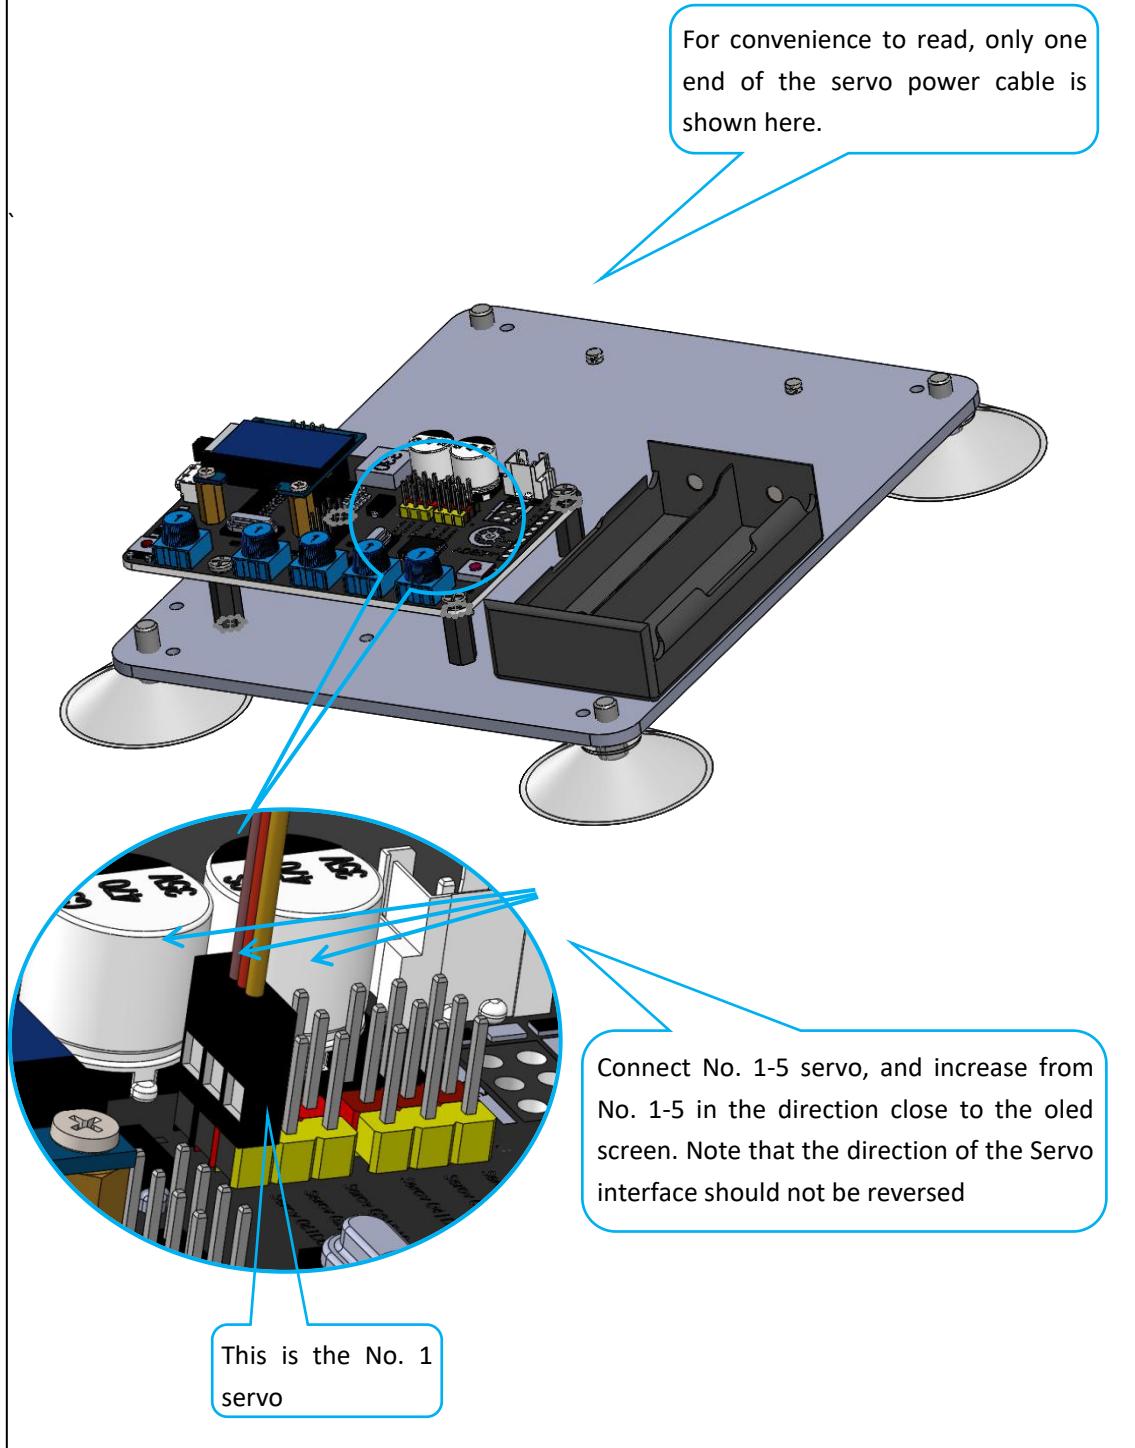

To remove the batteries, just pull the ribbon and take them out.

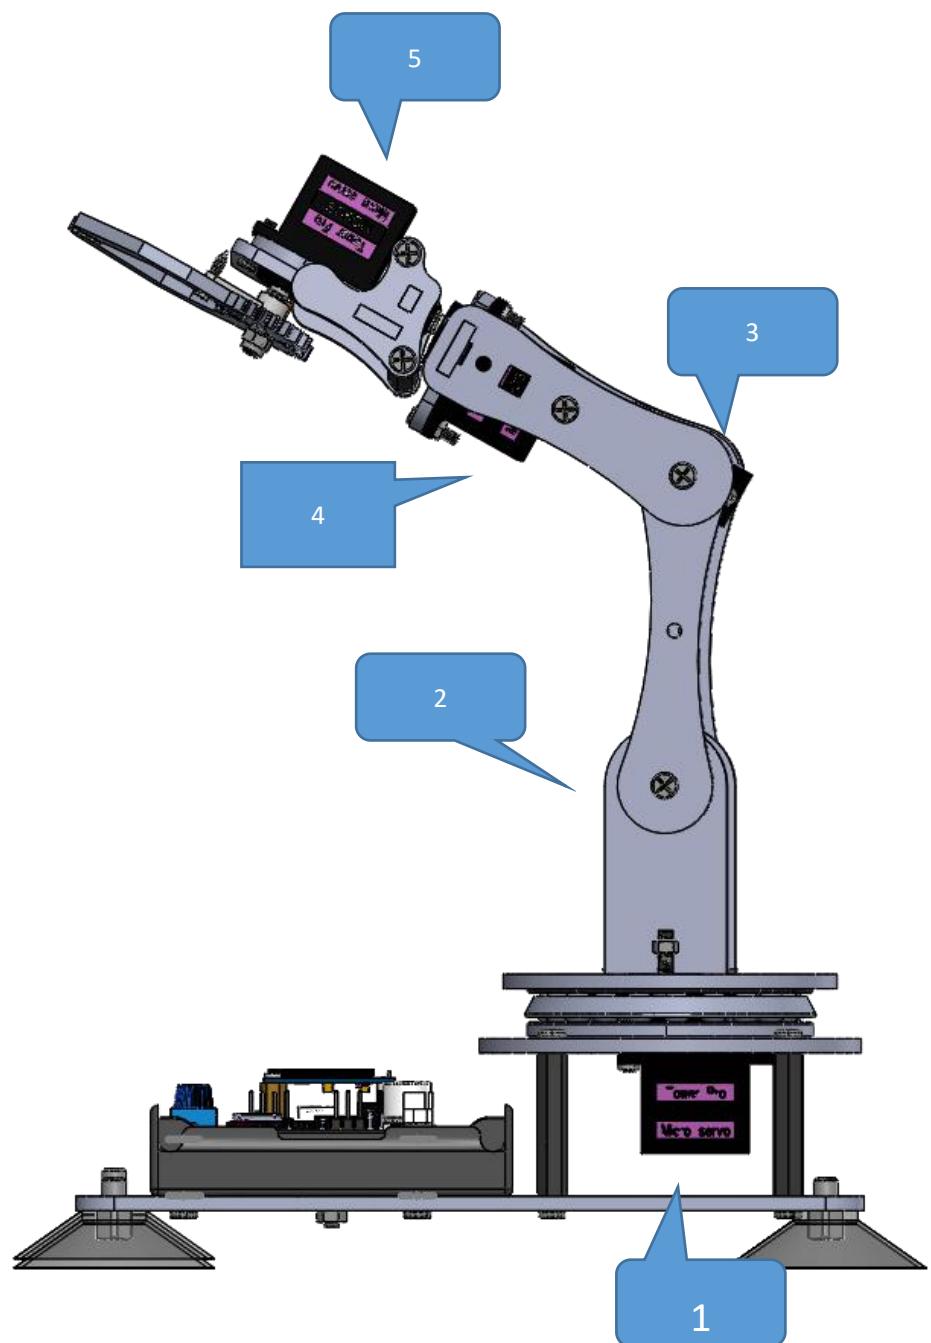

### 5.1.3 Turnplate and Rocker Arm Assembly

.Servo debugging.

Connect five servos to the Adeept Arm Drive Board.

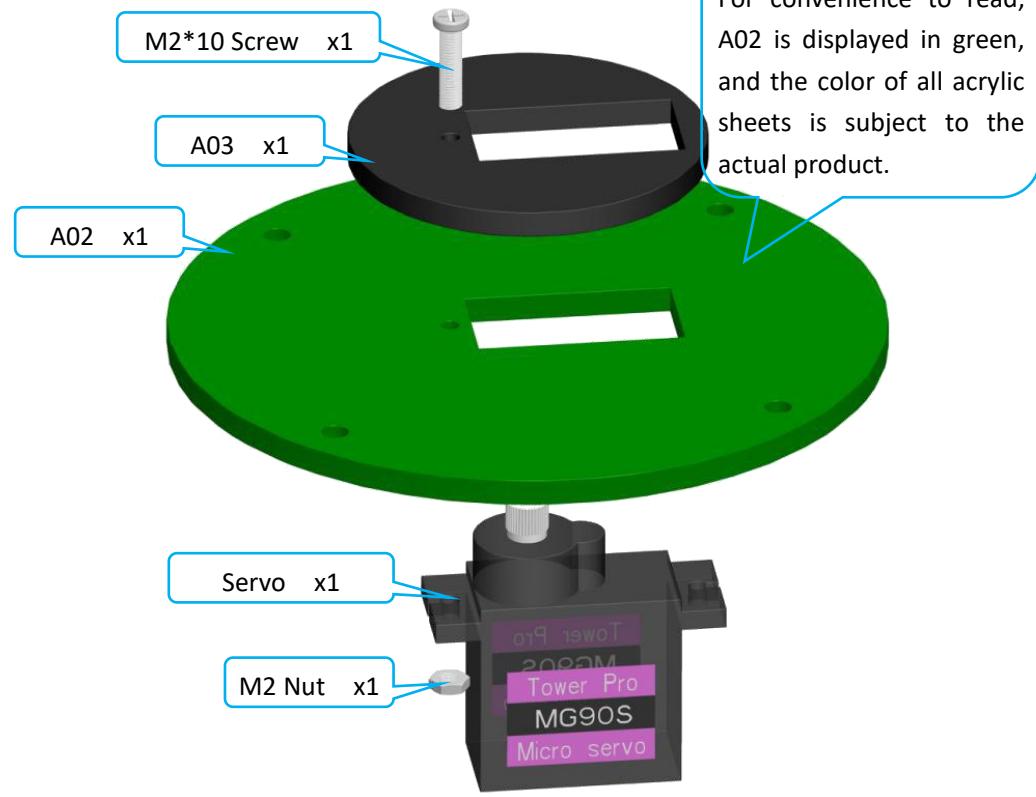

SERVO of number

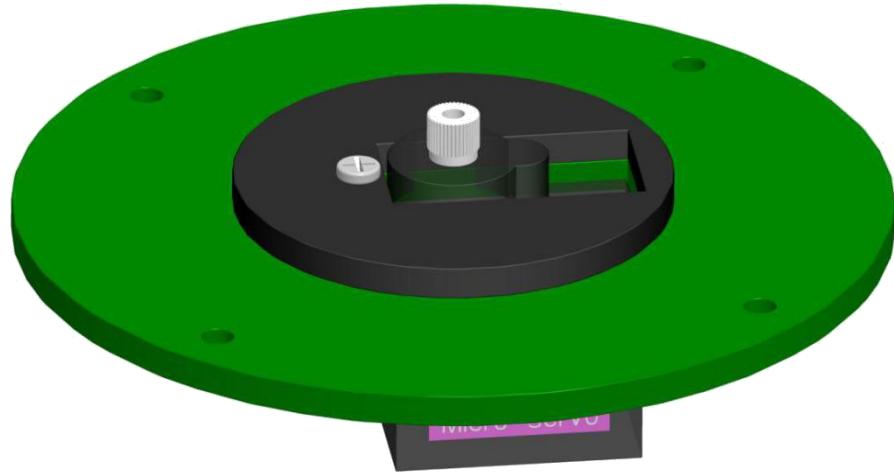

## 2. Fix a debugged servo to A02 and A03.

Assemble the following components

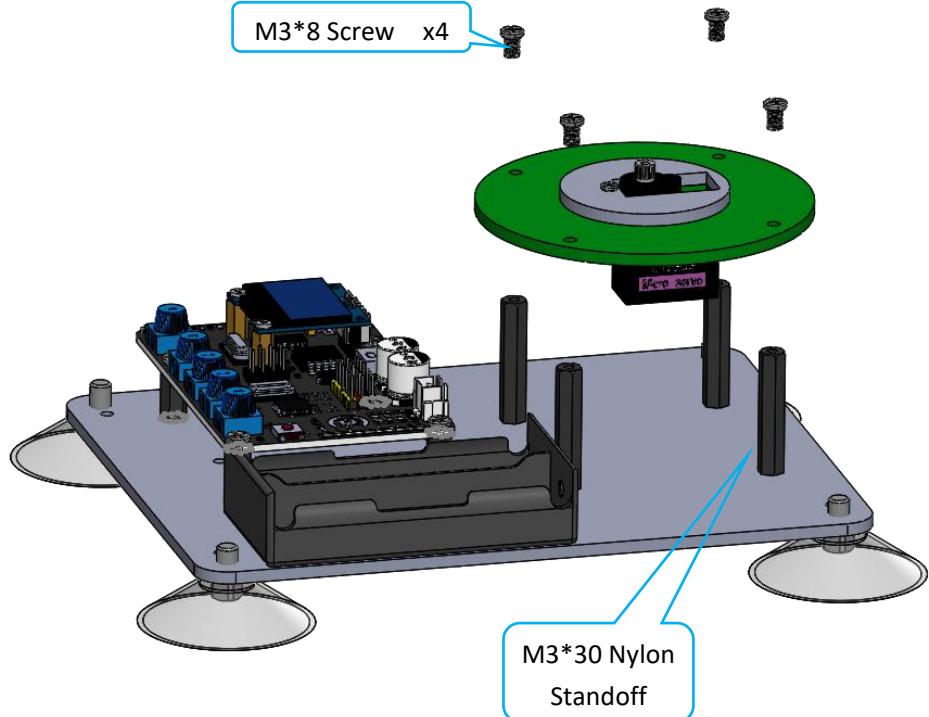

Effect diagram after assembling

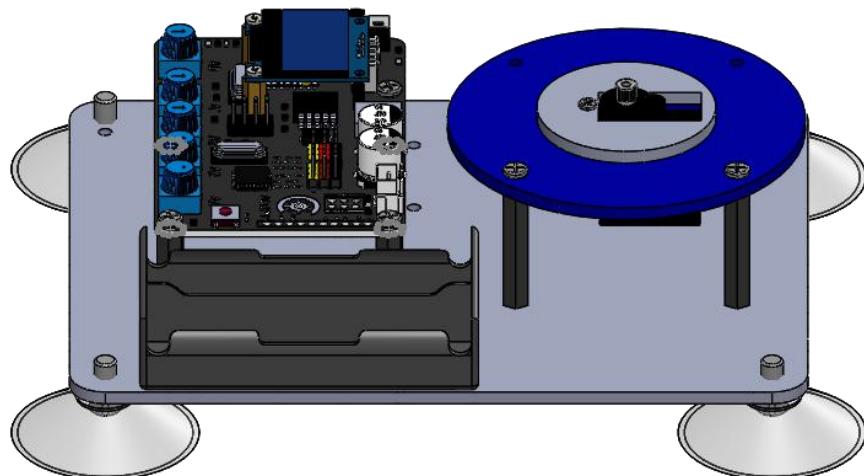

## 3. Then fix A02 to M3\*30 Nylon Standoff.

Assemble the following components

Effect diagram after assembling

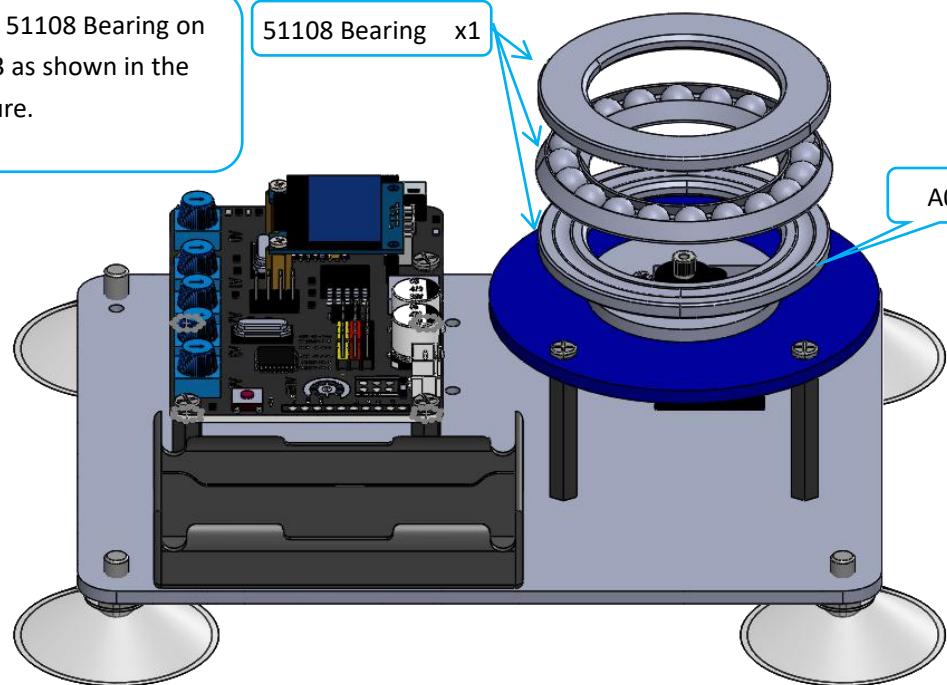

## 4. Assemble 51108 Bearing.

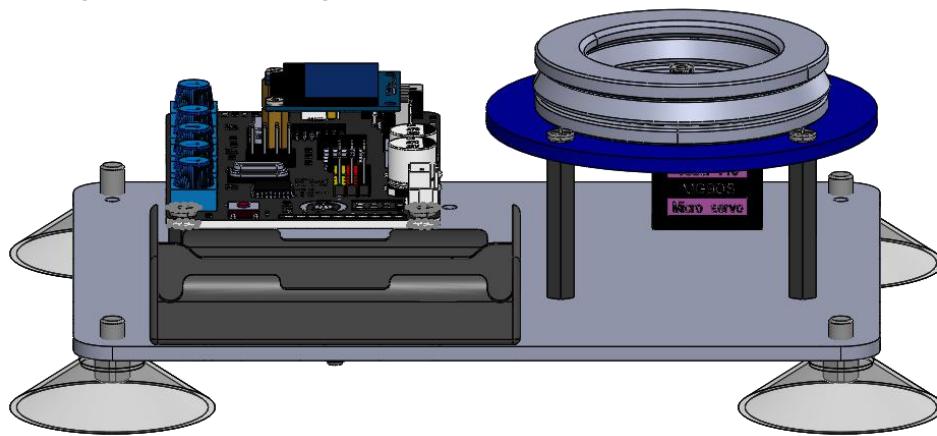

Assemble the following components

Put 51108 Bearing on A03 as shown in the figure.

51108 Bearing x1

Effect diagram after assembling

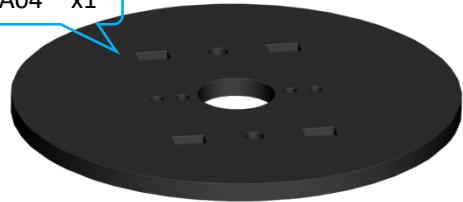

5. Take a rocker arm as in the illustration and connect it to A04.

Assemble the following components

Rocker arm x1

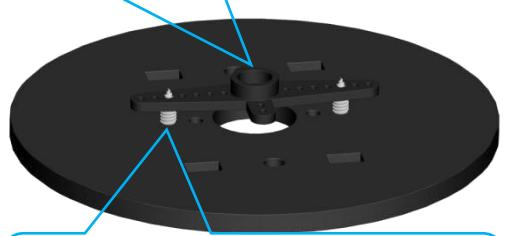

A04 x1

Self-tapping screw packaged with servo x2

Effect diagram after assembling

Note that the center of the rocker arm is aligned with the center of the A04.

Screw the self-tapping screw just into the rocker arm.

6. Take two rocker arm as in the illustration and connect them to A07.

Assemble the following components

Rocker arm x2

A07 x1

Self-tapping screw packaged with servo x2

Effect diagram after assembling

At this time, the rocker arm hasn't been fixed. When fixing, the mounting hole of the rocker arm should be aligned with the round hole on the A07.

7. Fix a debugged servo to A06.

Assemble the following components

M2\*10 Screw x2

A06 x1

A09 x1

Servo x1

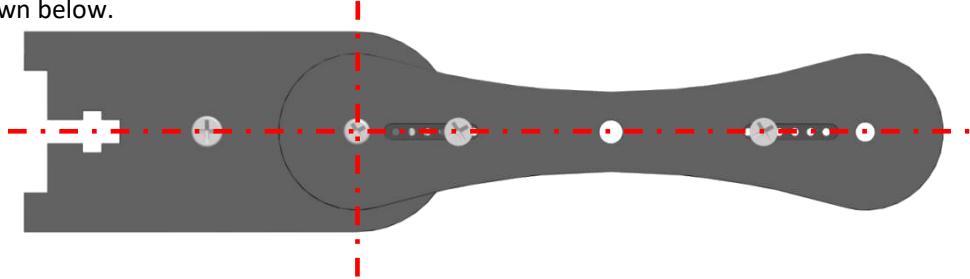

M2 Nut x2

Effect diagram after assembling

**8. Then fix one end of A07 to the servo on A06.**

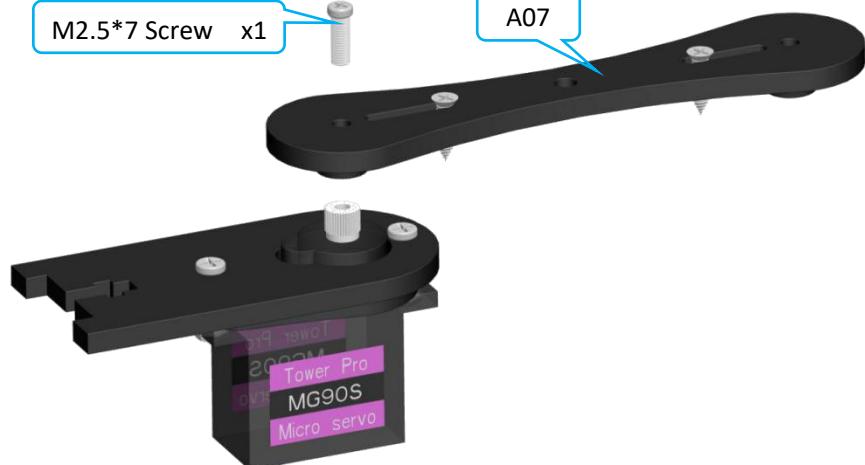

First install the rocker arm on the A07 into the servo. When installing, the mounting hole of the rocker arm should be aligned with the round hole on the A07. Install it at the angle shown below.

Assemble the following components

M2.5\*7 Screw x1

A07

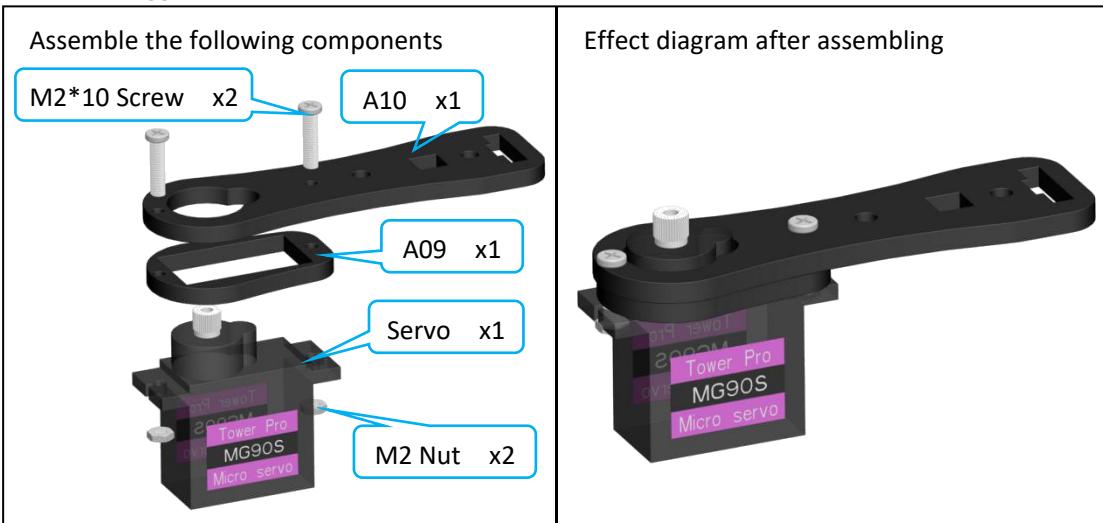

Effect diagram after assembling

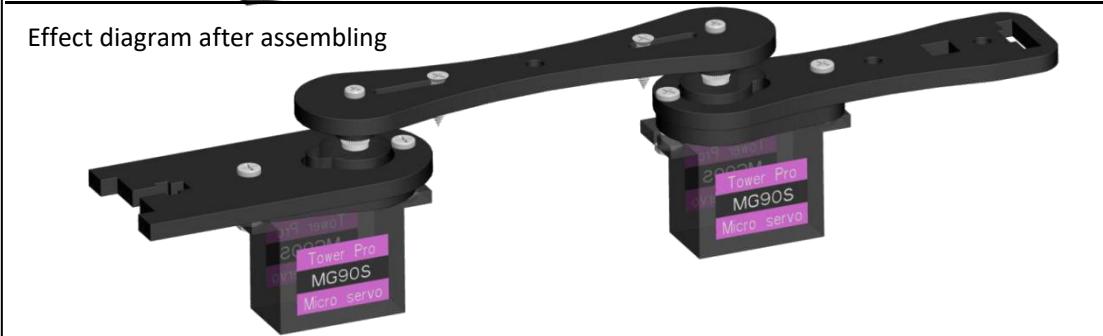

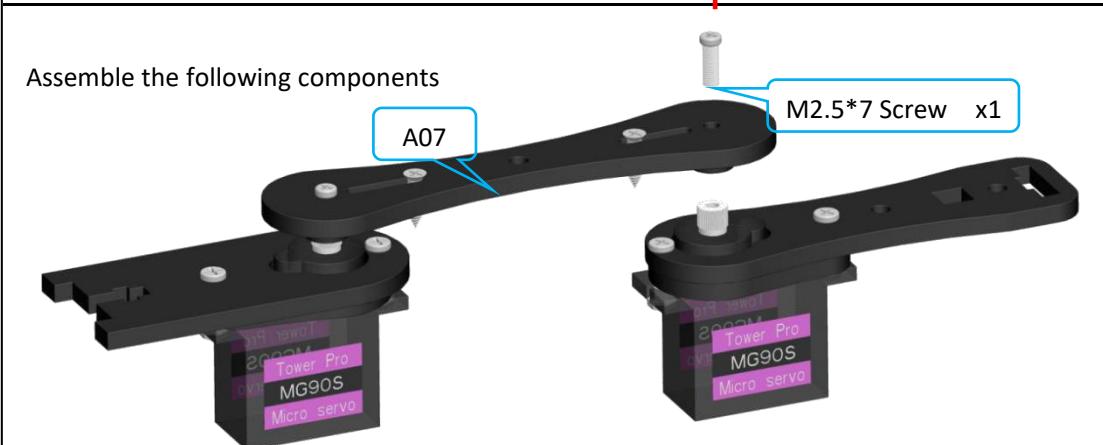

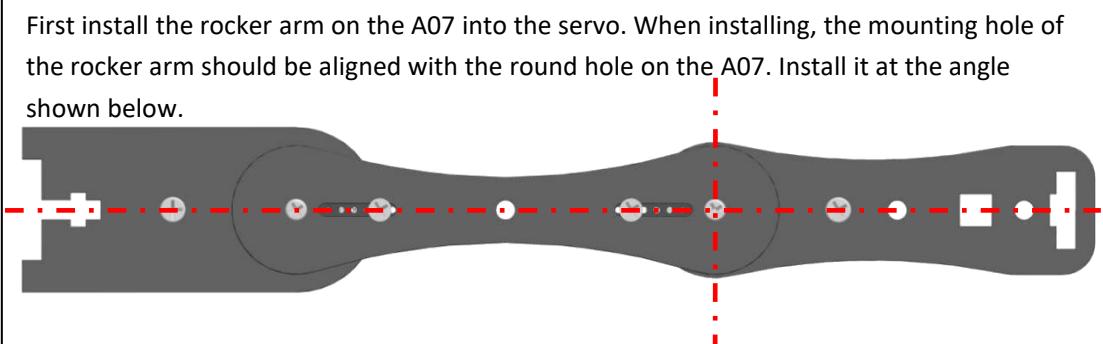

Please note that when installing the servo arm, please connect the servo to the robot drive Hat. Robot drive Hat will automatically check the

9. Fix a debugged servo to A10.

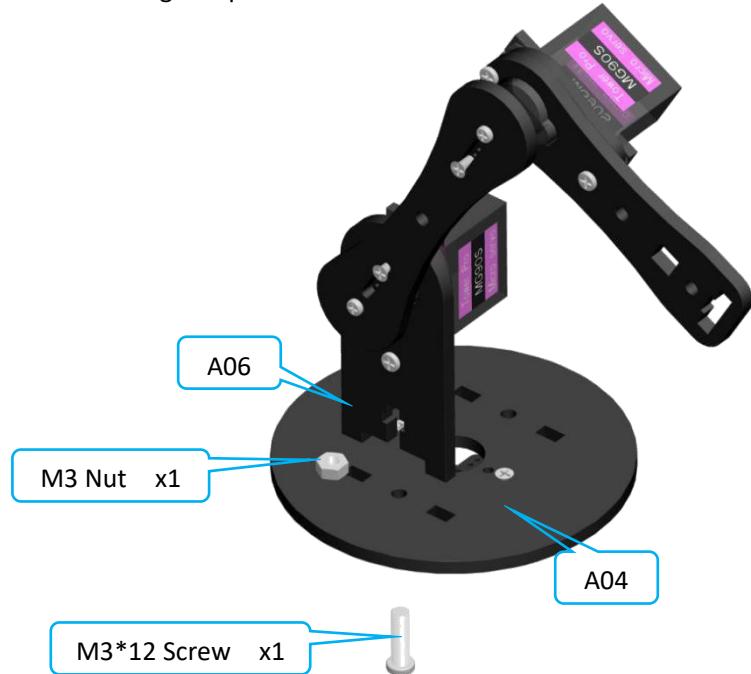

10. Then fix the other end of the A07 to the servo on the A10.

## 11. Then fix A06 to A04.

Assemble the following components

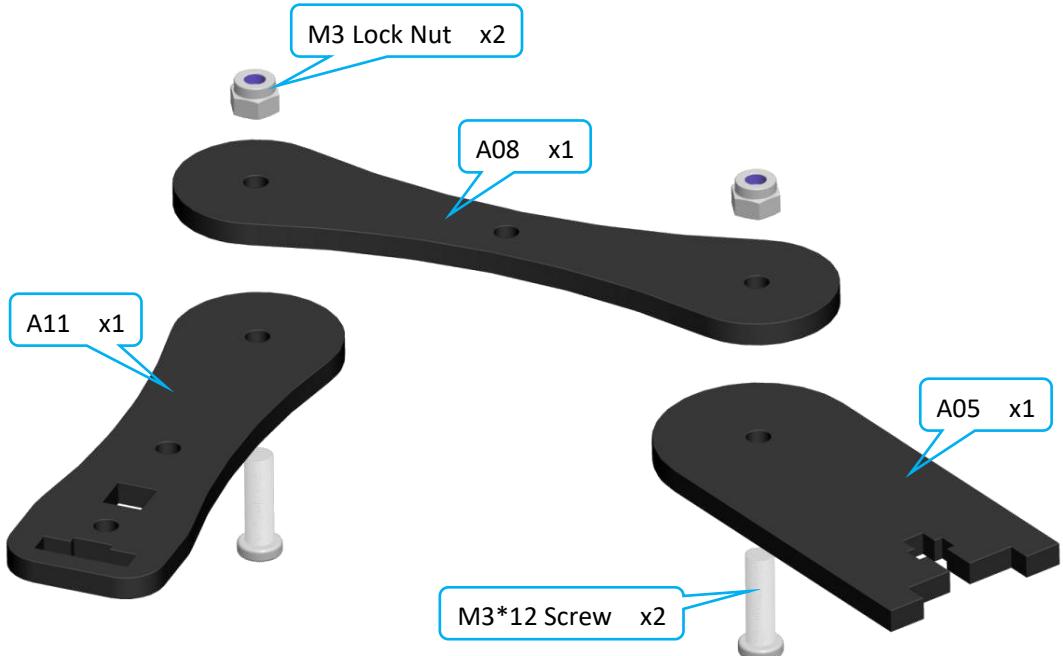

Effect diagram after assembling

## 12. Connect A05 with A08 and A11.

Assemble the following components

Do not tighten between M3 Lock Nut and M3\*12 Screw. Allow rotation between A05 and A08, also A08 and A11.

Effect diagram after assembling

## 13. Fix A05 to A04.

Assemble the following components

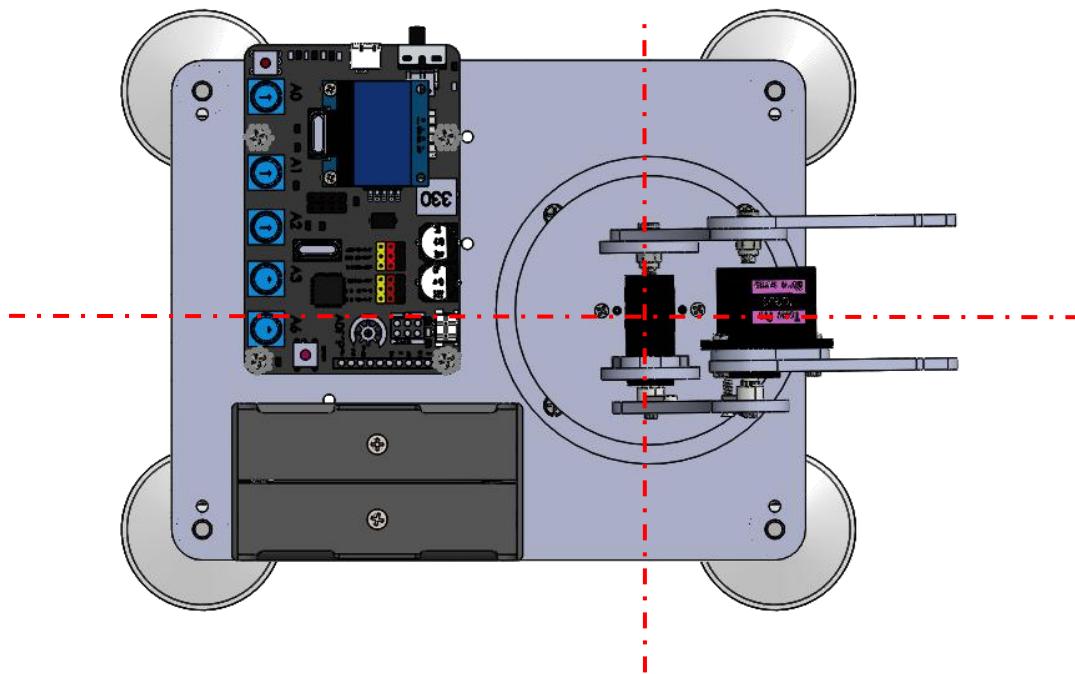

Effect diagram after assembling

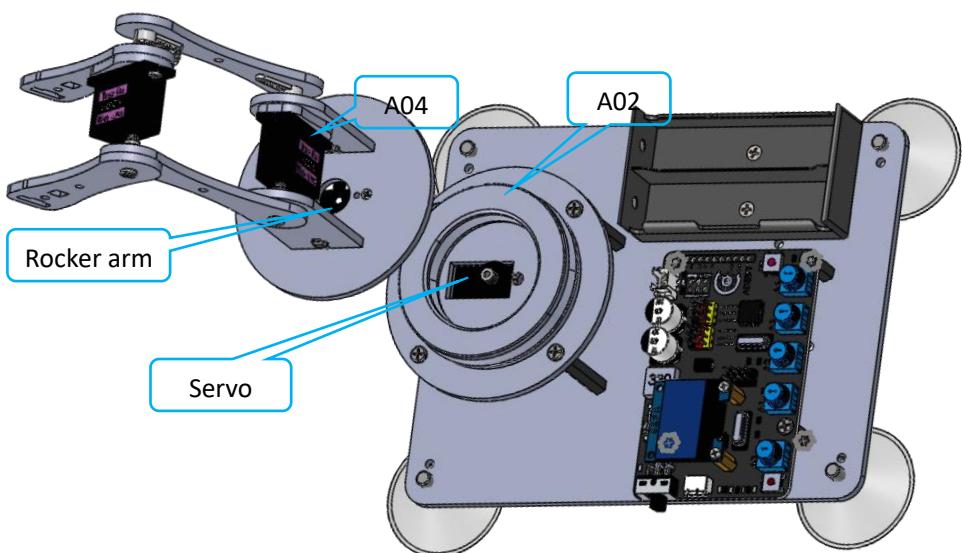

14. Fix the rocker arm under A04 with the servo on A02.

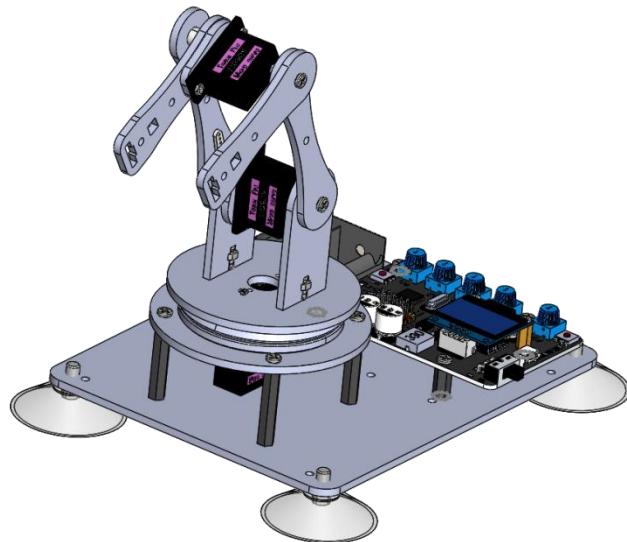

The angle when the rocker arm is installed into the servo is as shown below.

Assemble the following components

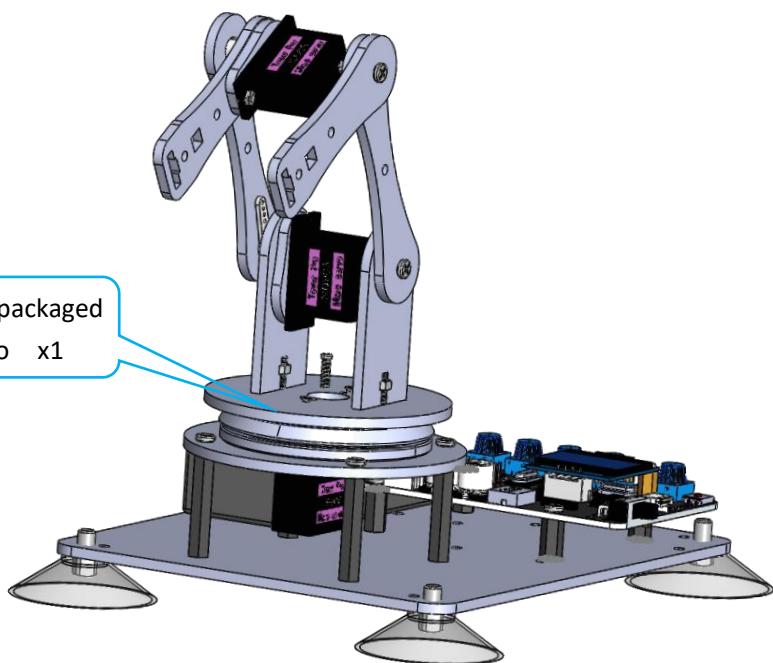

Effect diagram after assembling

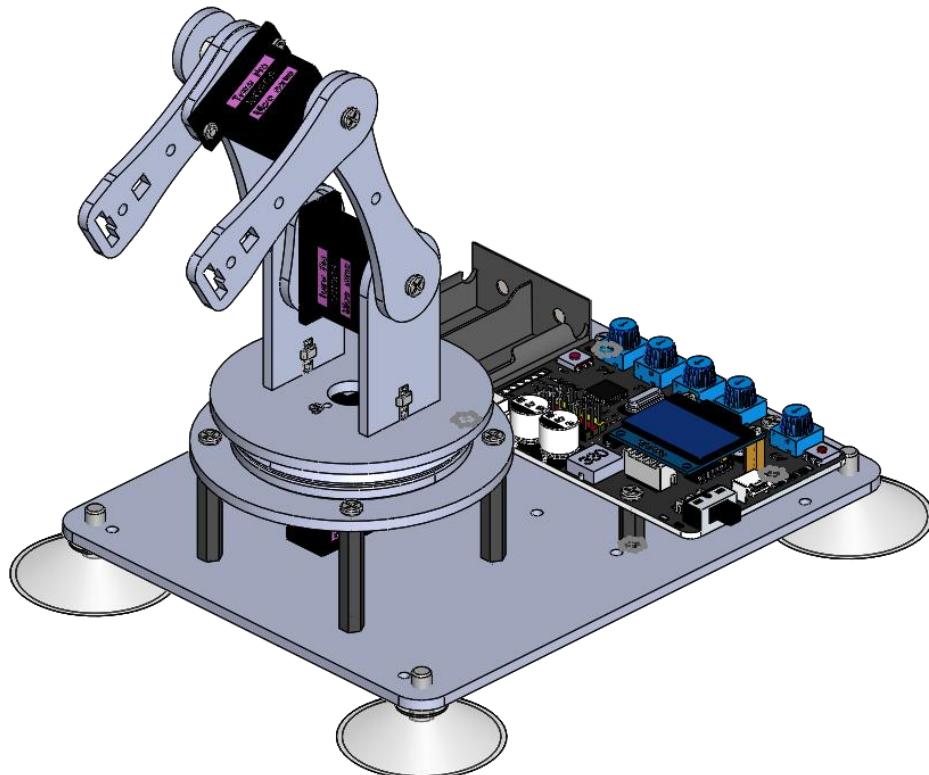

Then fix the rocker arm to the servo with the fixing screw packaged with servo.

Assemble the following components

Fixing screw packaged  
with servo x1

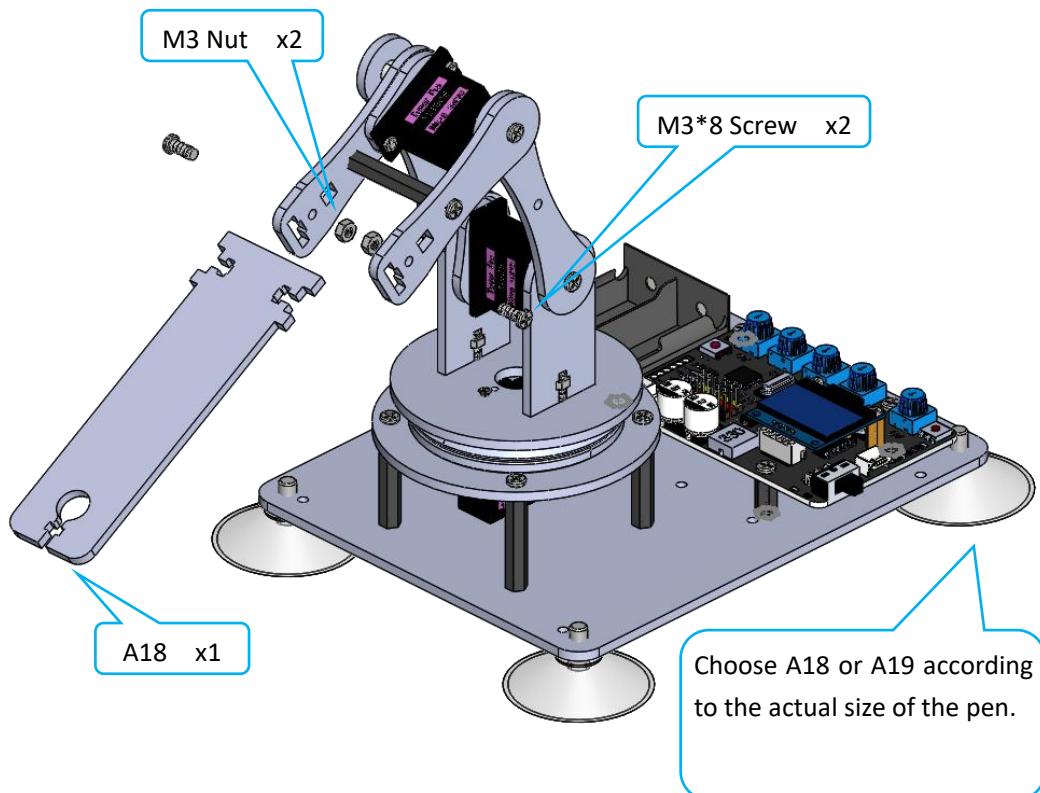

Effect diagram after assembling

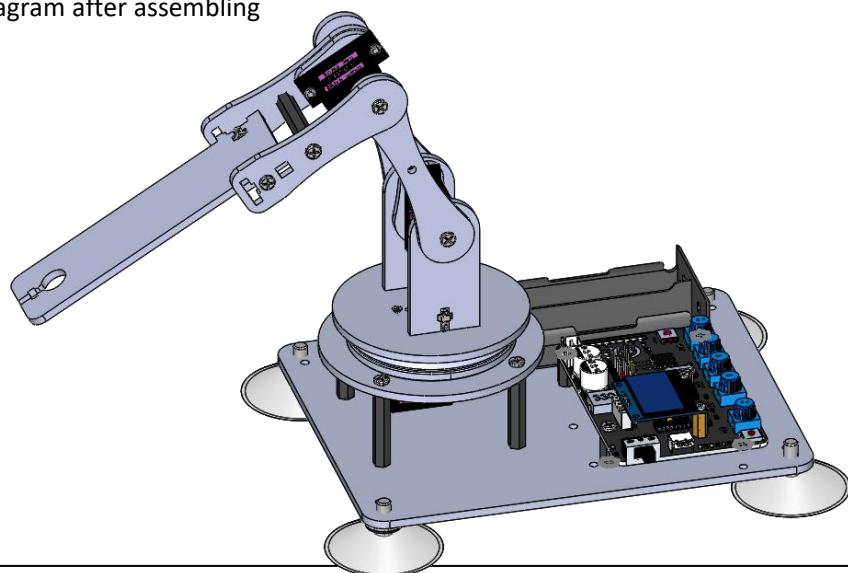

## 5.2 Play 1

Fix A18 between A10 and A11.

Assemble the following components

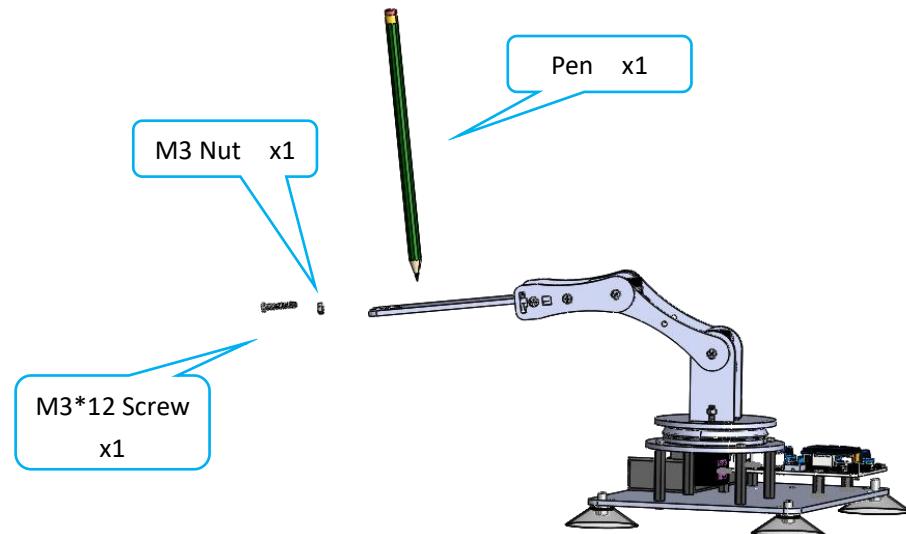

Effect diagram after assembling

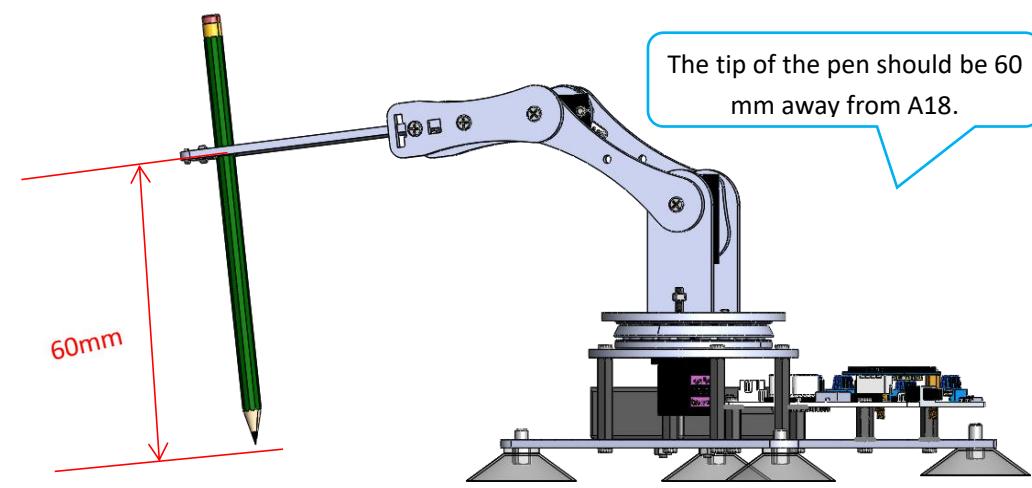

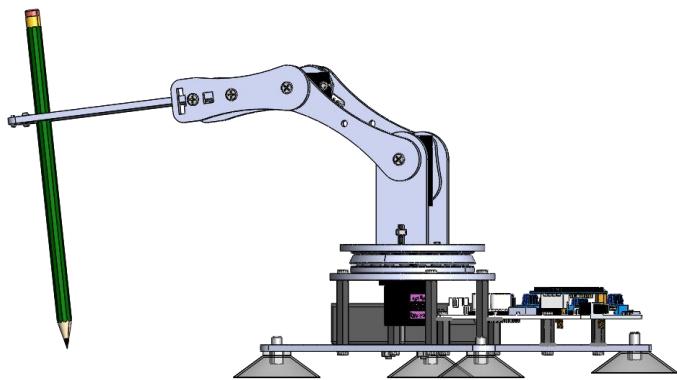

Fix the pen with A18.

Assemble the following components

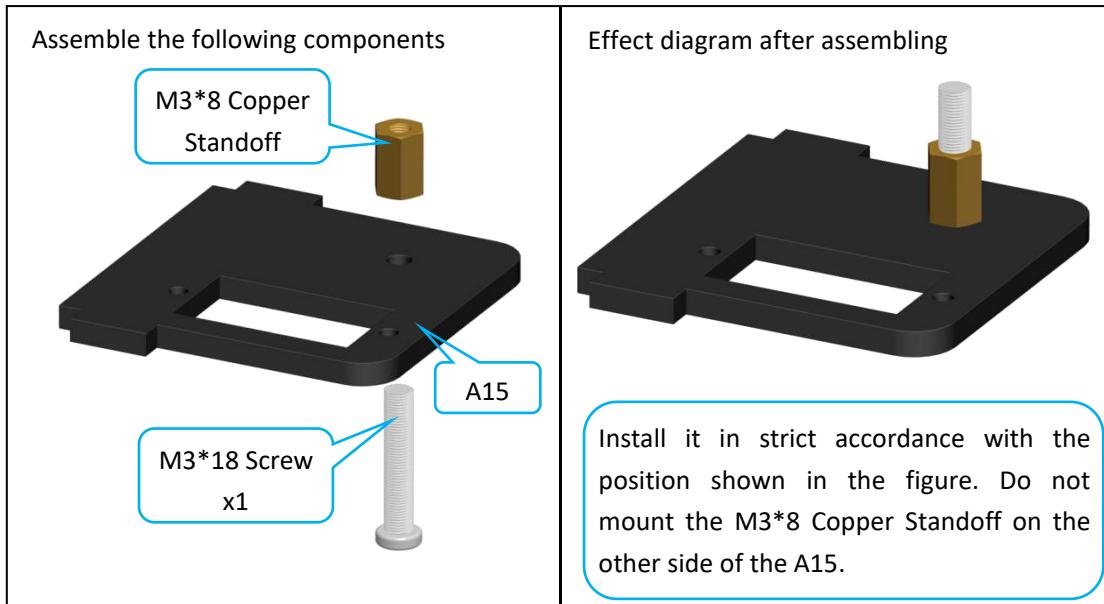

Effect diagram after assembling

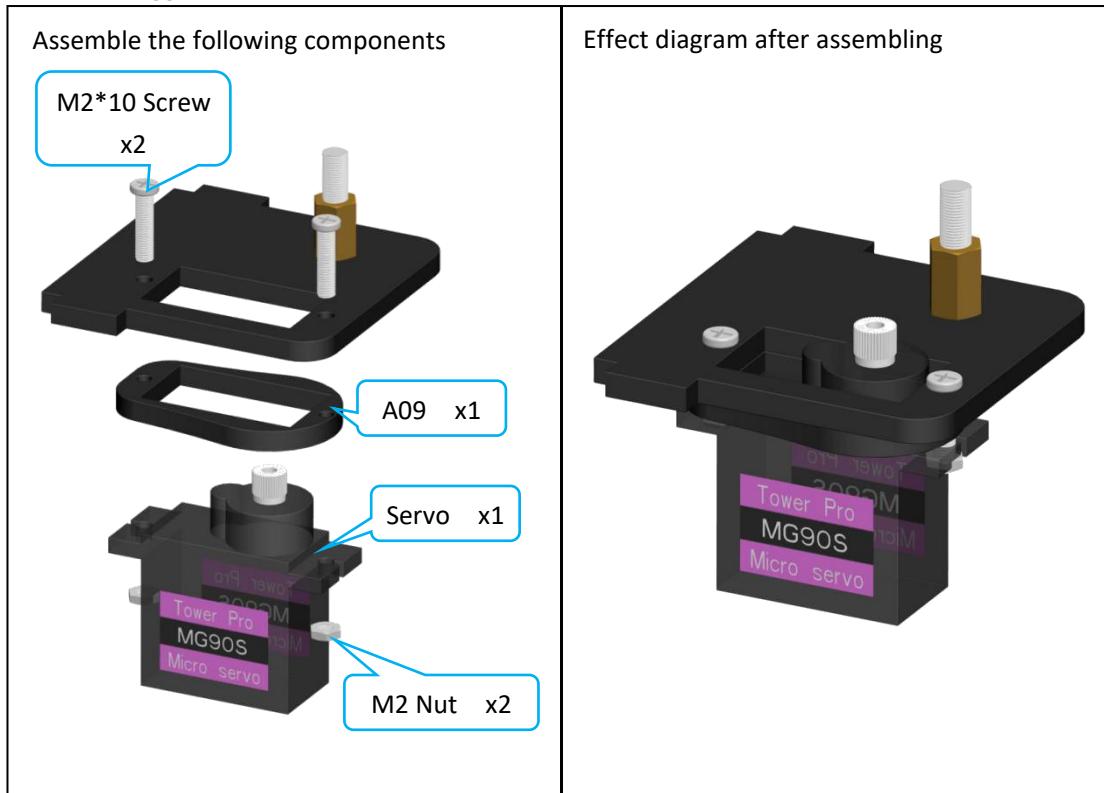

## 5.3 Play 2

1. Fix one M3\*8 Copper Standoff to A15.

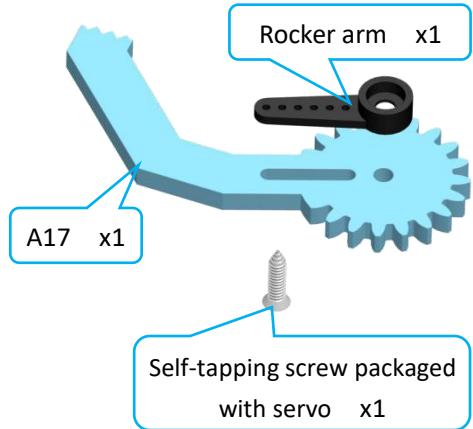

2. Fix a debugged servo to A15.

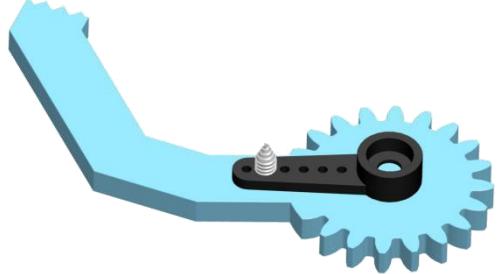

**3. Fix one rocker arm of the servo to A17.**

Assemble the following components

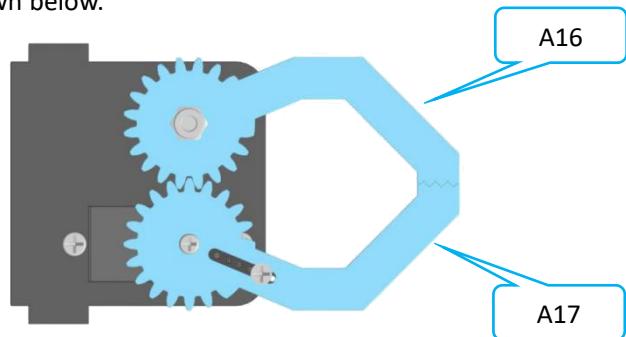

Effect diagram after assembling

**4. Assemble A16 and A17.**

Install A16 and A17 as shown below.

Assemble the following components

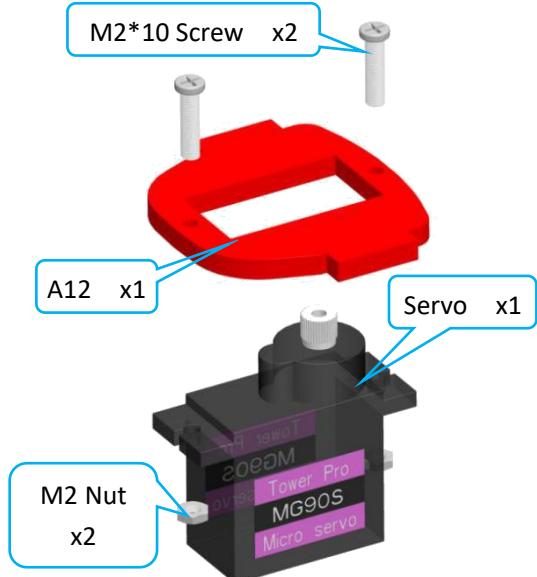

Effect diagram after assembling

**Do not tighten the M3 Lock Nut to ensure that the A16 can rotate.**

**5. Fix a debugged servo to A12.**

Assemble the following components

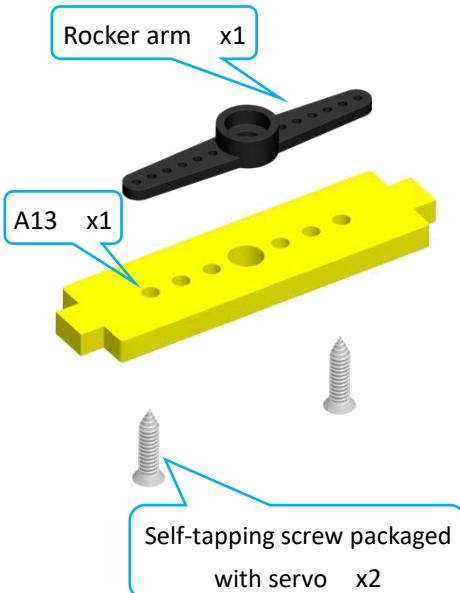

Effect diagram after assembling

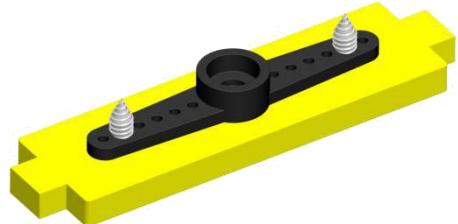

**6. Fix a rocker arm to A13.**

Assemble the following components

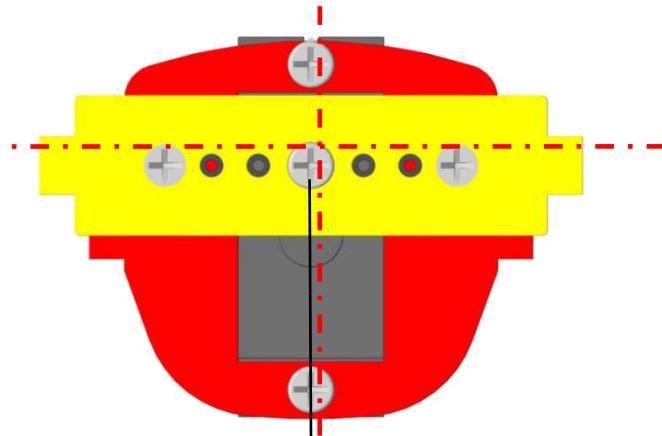

Effect diagram after assembling

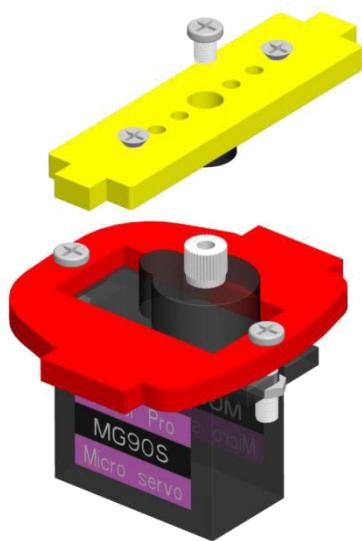

7. Fix the rocker arm on the A13 to the servo on the A12.

Install as shown below.

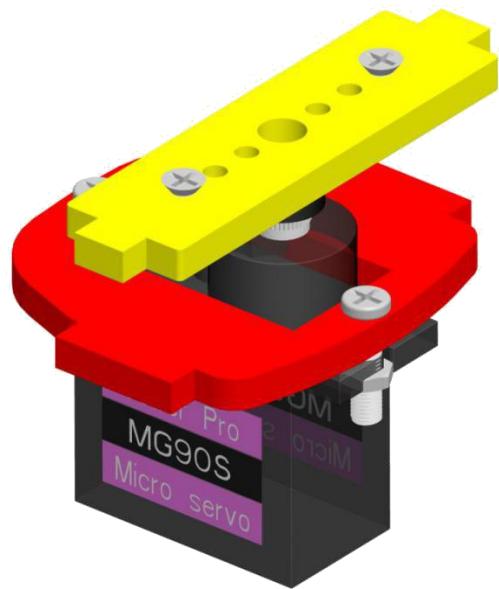

Assemble the following components

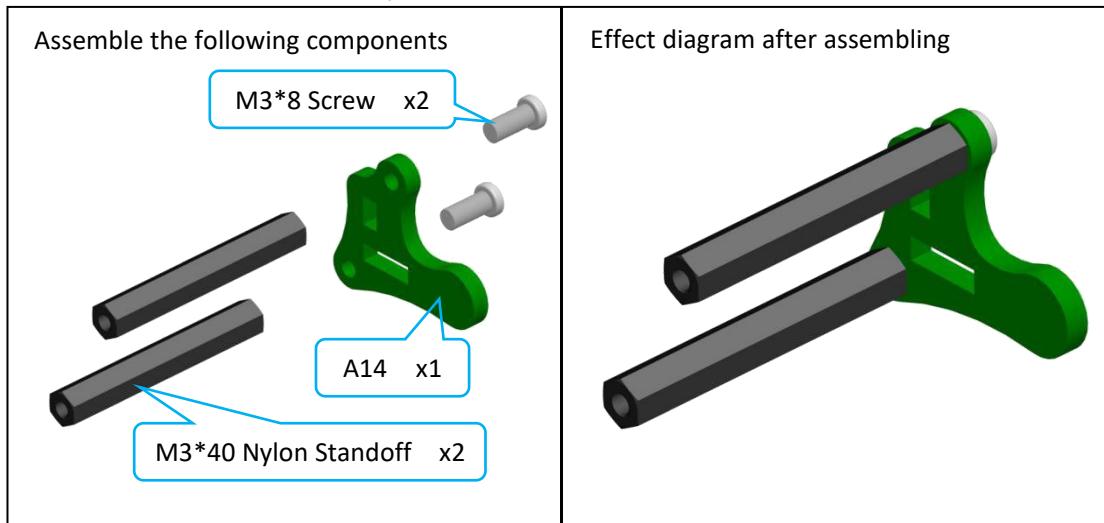

Fixing screw packaged  
with servo x1

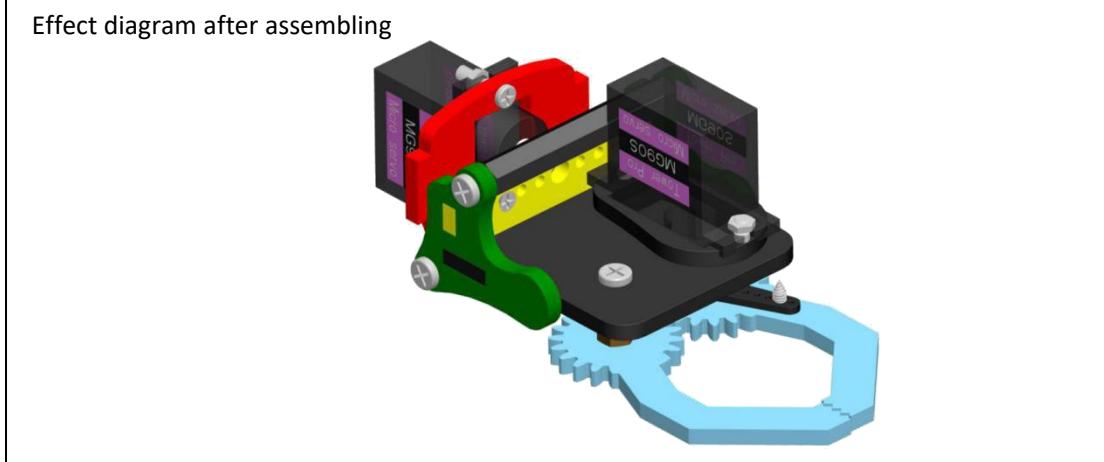

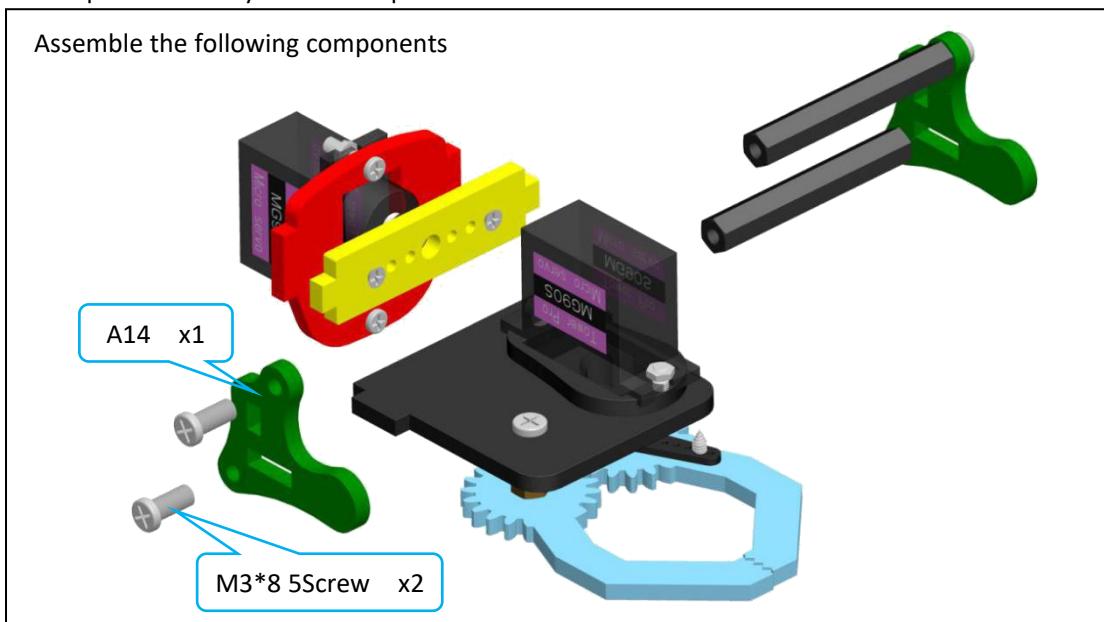

Effect diagram after assembling

8. Fix one A14 with two M3\*40 Nylon Standoffs.

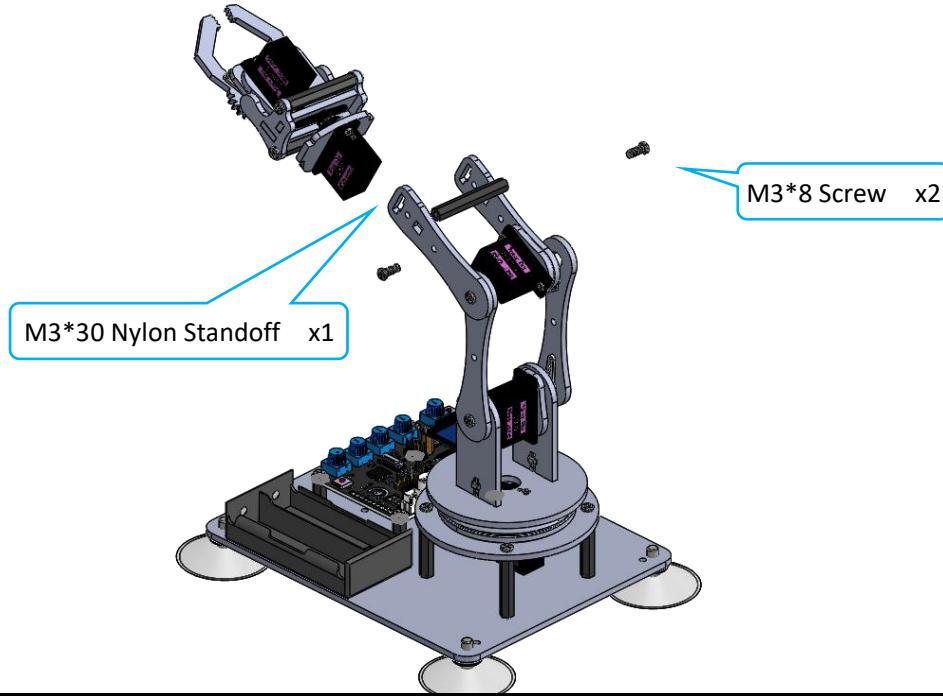

9. Complete assembly of the clamp section.

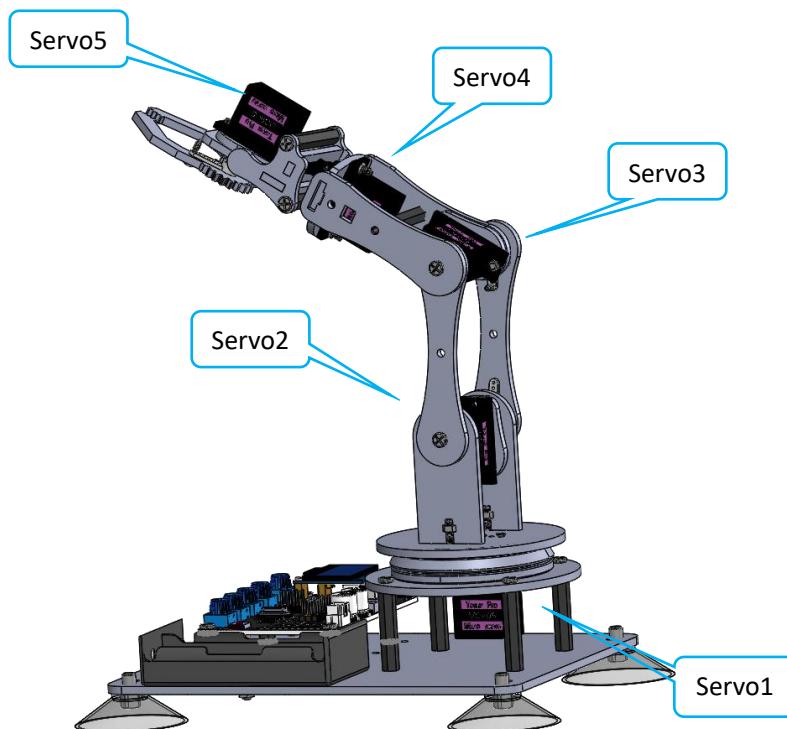

Install the clamp section on the robotic arm.

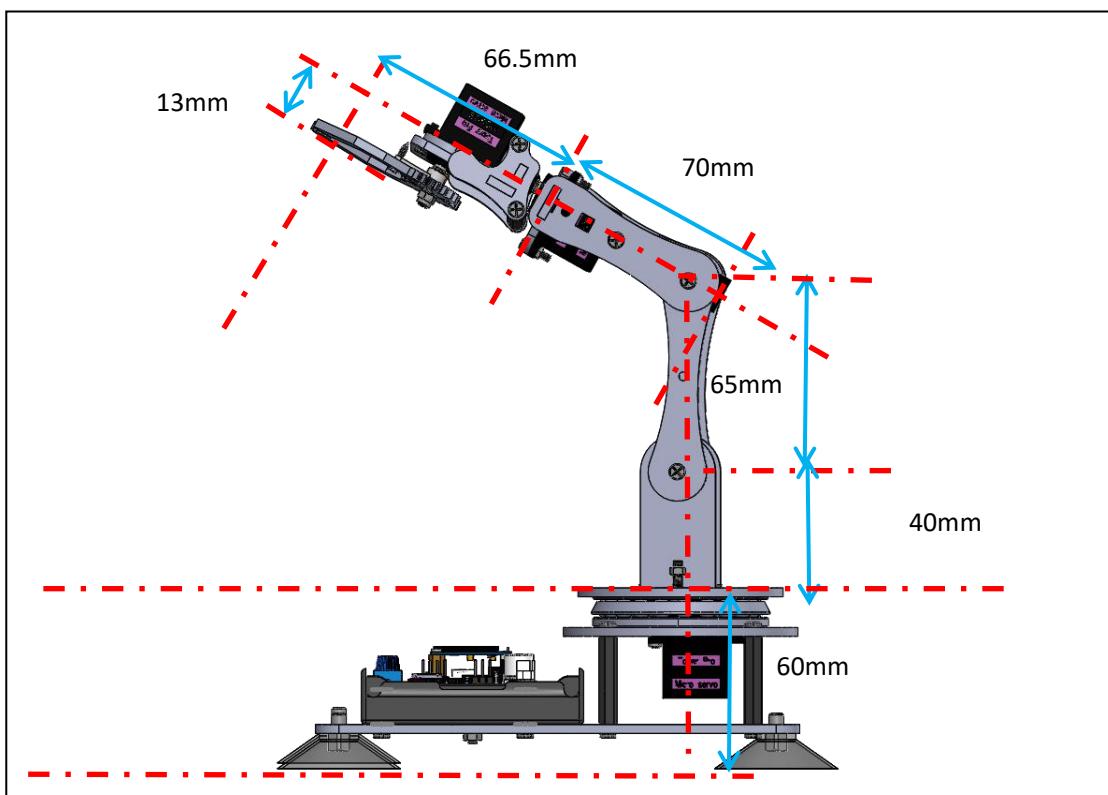

Assemble the following components

Effect diagram after assembling

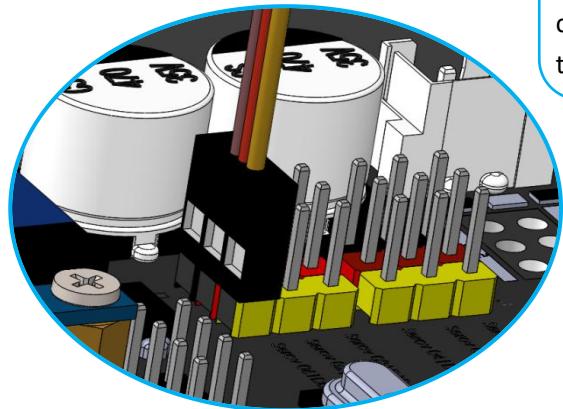

Number each servo to prepare for the circuit connection.

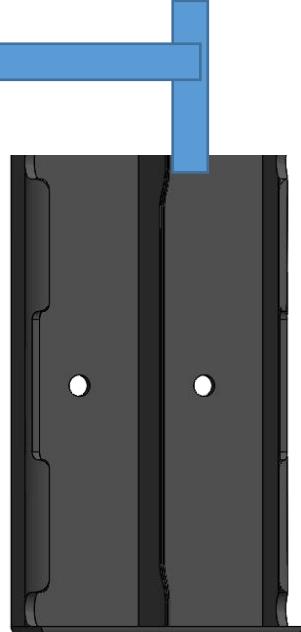

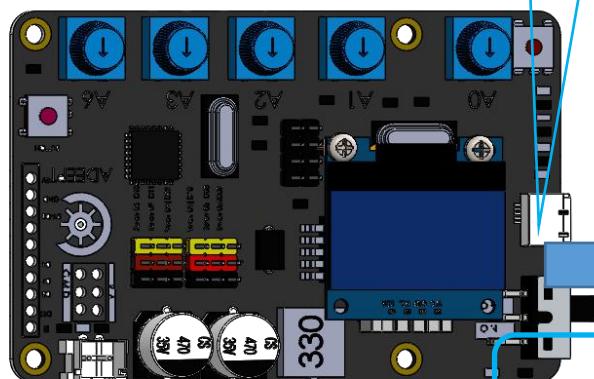

## 5.4 Circuit Connection

Connection of each devices for the robotic arm:

Insert the servo numbered in the last step into the port here correspondently. The color of the three power cables of the servo corresponds to the port color (as shown on the left).

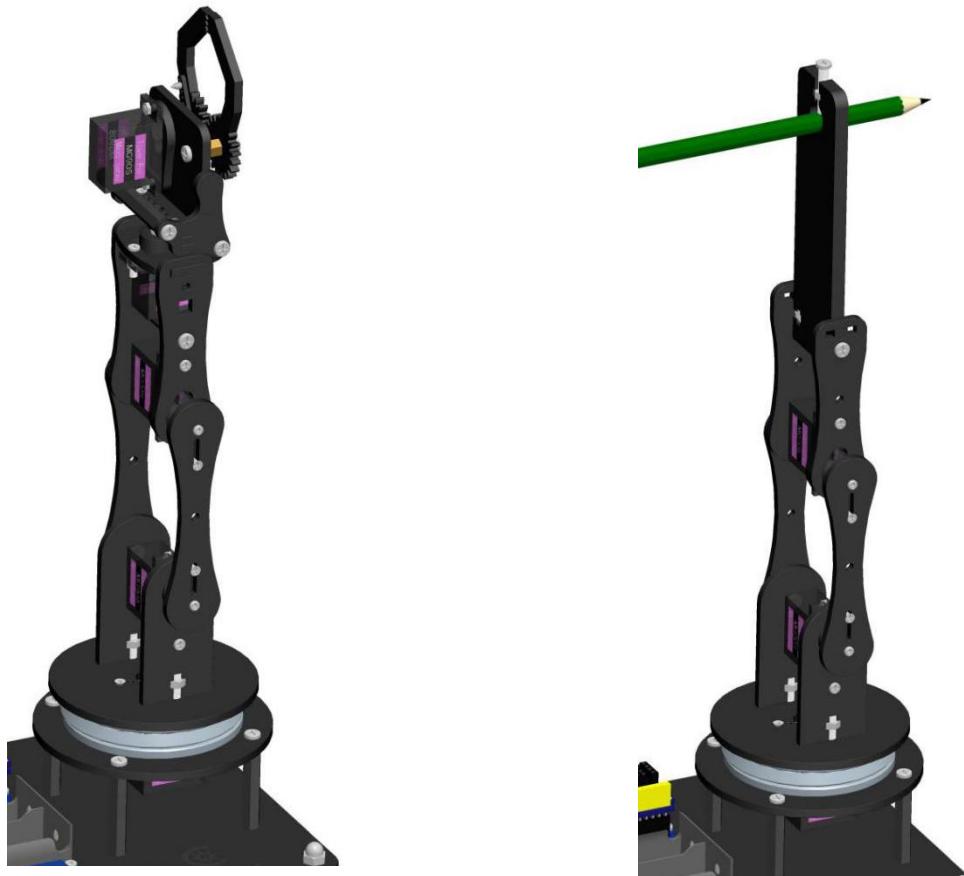

OLED

18650x1 Battery Holder

## 5.5 Combinations of the robotic arm

Assemble method (except the front part of the robotic arm).

In 90 degrees when powered on

Before starting to exert the function, we need to test whether there are problems with the assembly of the robotic arm. In the matching code, AdeeptArmInitializationCode.ino is the code for testing the robotic arm to adjust to 90 degrees when powered on. You can open the code and download it to the Arduino for testing (it may not be able to achieve the effect shown in the picture when powered on, a little error is allowed to exist).

## Lesson 6 Controlling the Robotic Arm with GwBlock

### Graphical Programming

We creatively provide users with Arduino graphical programming tools-GwBlock. Using graphical program instruction blocks to achieve control of Arduino with the Web page. Compared with the traditional pure character interface code programming platform, graphical programming is more conducive to learners who have not mastered C/C++. If you have studied Scratch, then you will be able to easily master the graphical programming of Arduino. Next we will teach you how to build graphical programming of Arduino.

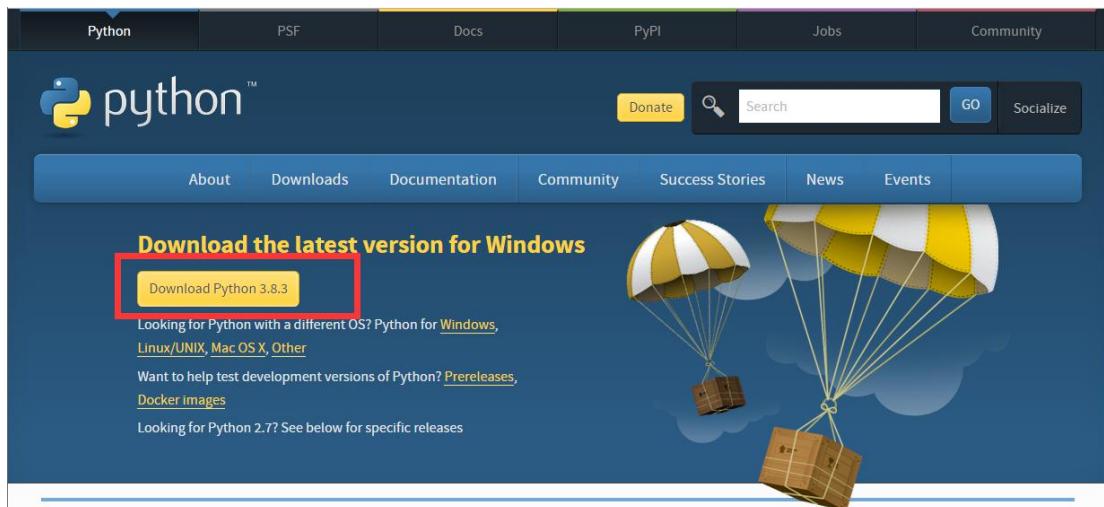

## 6.1 Downloading and installing Python

(1) Log in to the official website by browser:

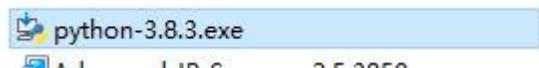

<https://www.python.org/downloads/>

(2) Click the "Download Python 3.8.3" button to download and wait for the download to complete:

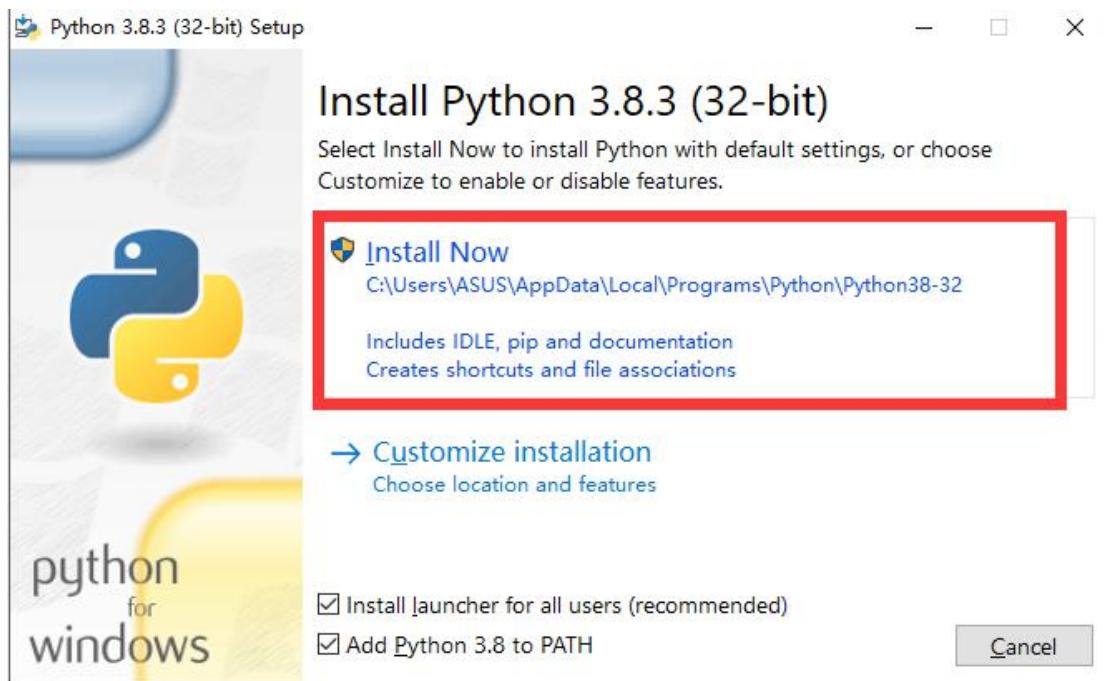

(3) Open the downloaded file, double-click to open it to install:

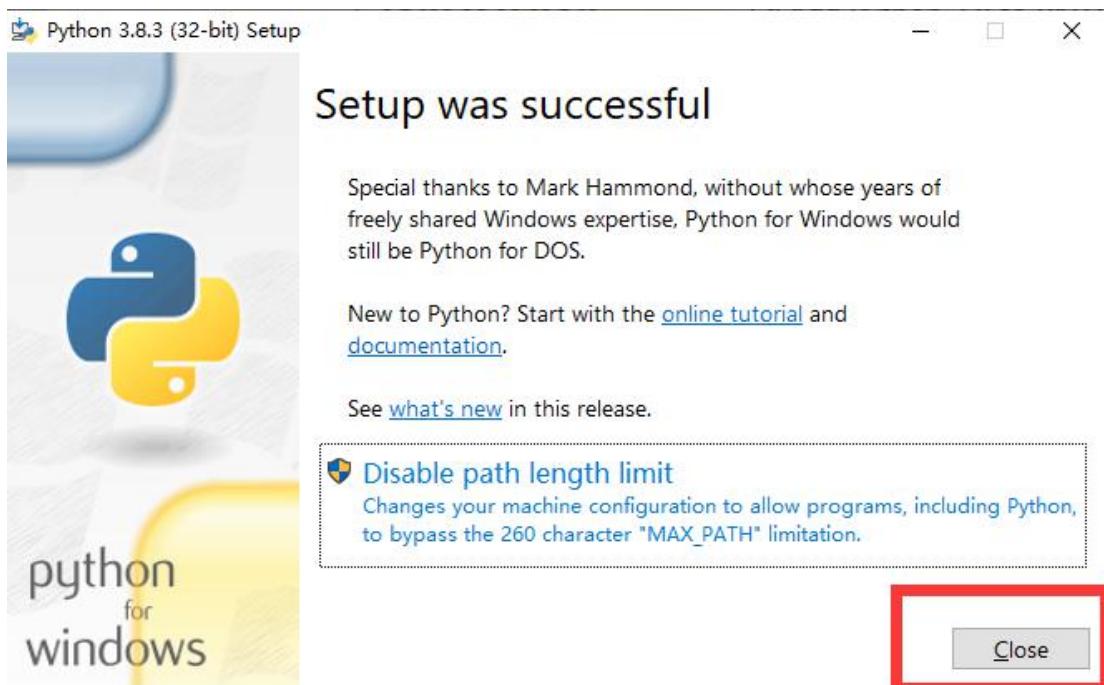

(4) Select the "Add Python 3.8 to PATH" option:

(5) Then click "Install Now" to install.

(6) Wait for the Python installation to complete and click "Close" to close.

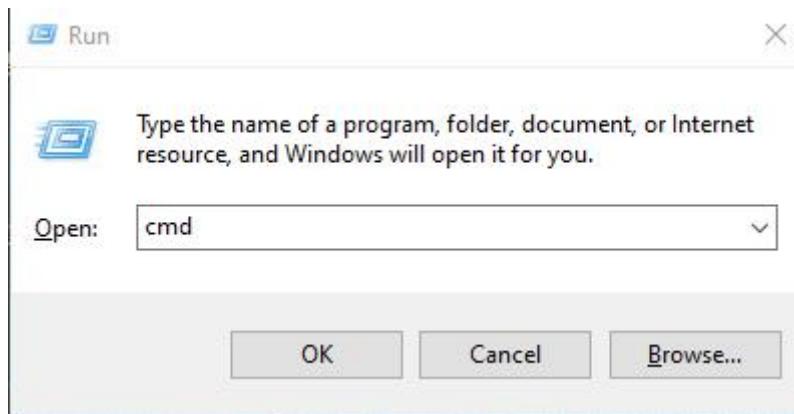

## 6.2 Installing pySerial and connecting GwBlock graphical editor

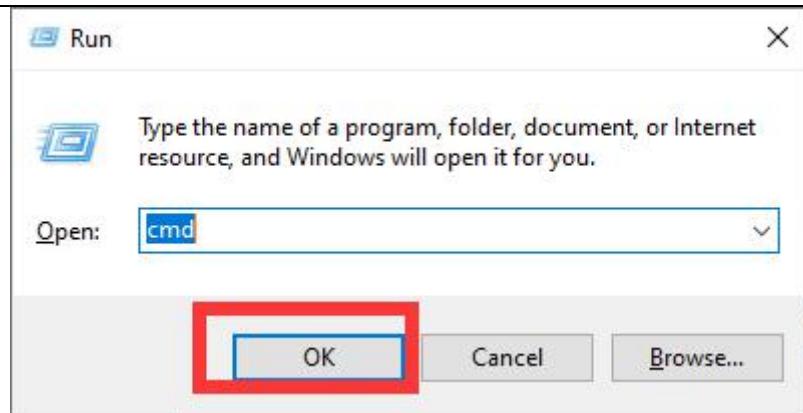

pySerial encapsulates the serial communication module, supporting Linux, Windows, BSD (may support all operating systems that support POSIX), Jython (Java) and IconPython (.NET and Mono). The pyserial module encapsulates access to the serial port. The port number starts from 0 by default. There is no need to know the port name in the program. APIs like file reading and writing, read and write (readline, etc. are also supported), support binary transmission, no null elimination, no cr-lf conversion. All programs are completed by Python. In addition to the standard library, it does not depend on other packages, except pywin32 (windows), JavaComm (Jython). POSIX (Linux, BSD) only depends on the Python standard library. APIs like file read and write, read, write (readline, etc. are also supported), support binary transmission, no null elimination, no cr-lf conversion, all programs are all done by Python, and do not depend on other packages except the standard library, except pywin32 (windows), JavaComm (Jython). POSIX (Linux, BSD) only depends on the Python standard library.

Before downloading and installing, you need to connect the Adeept Arm Drive Board development board to your computer.

(1) Press Win+R shortcut key to open CMD under Windows 10:

(2) Click "OK":

(3) Enter the command in the window:

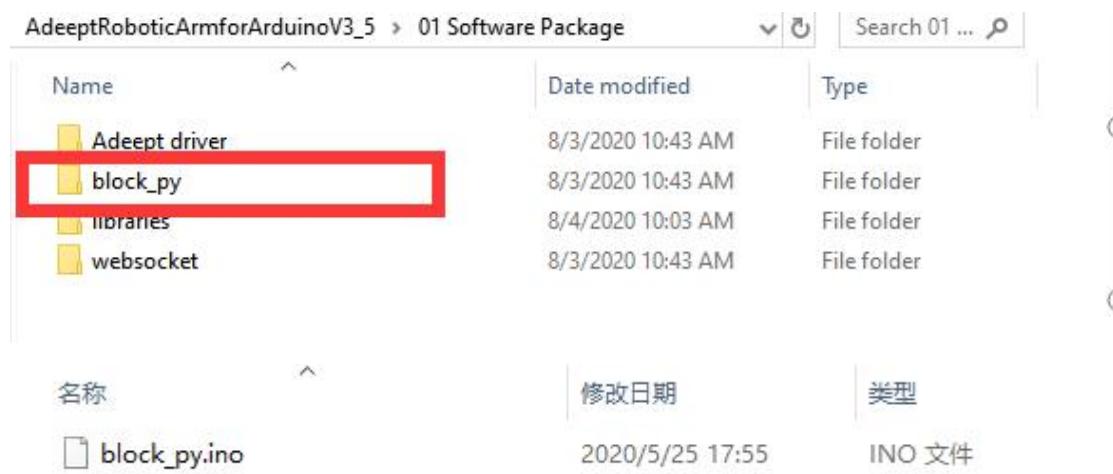

**pip install pyserial**

Press the Enter and wait for the installation to complete.

```
C:\Windows\system32\cmd.exe

block_py.ino	2020/5/25 17:55	INO 文件

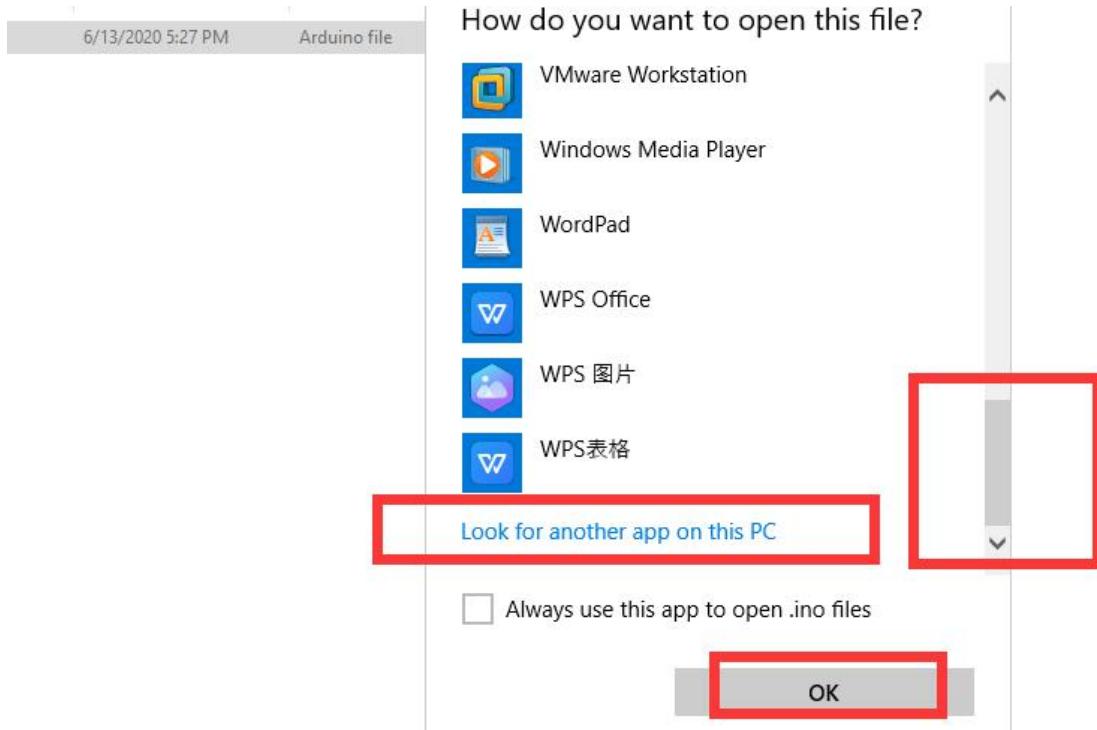

(5) Then right-click the file: "block\_py.ino". Select "Open with" → "Choose another app".

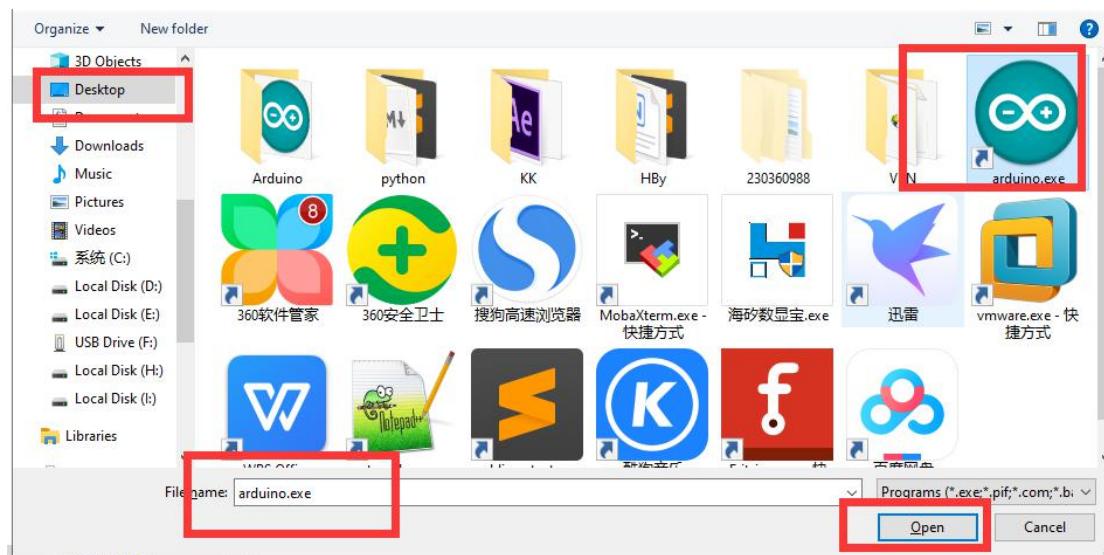

(6) Click "More apps", then click "OK".

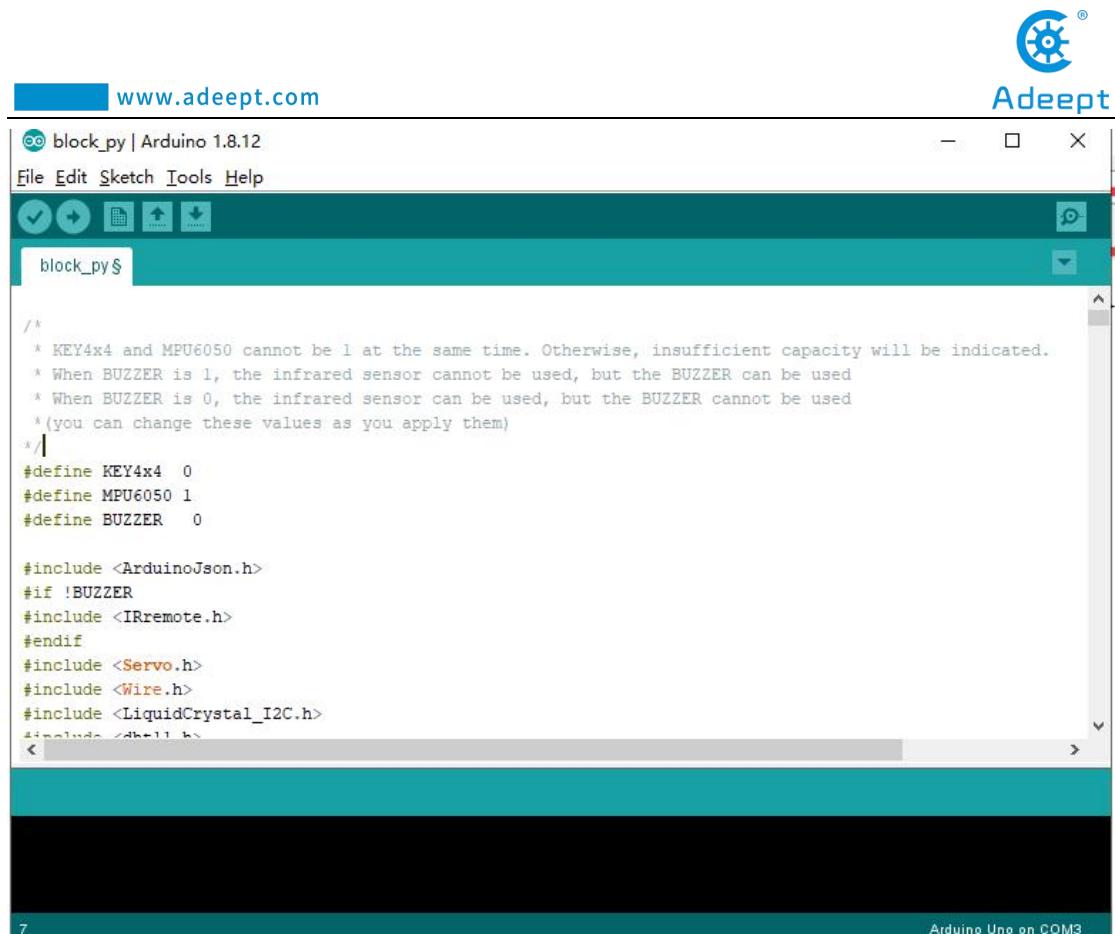

(7) Slide the mouse down, click "Look for another app on this PC", and then click "OK".

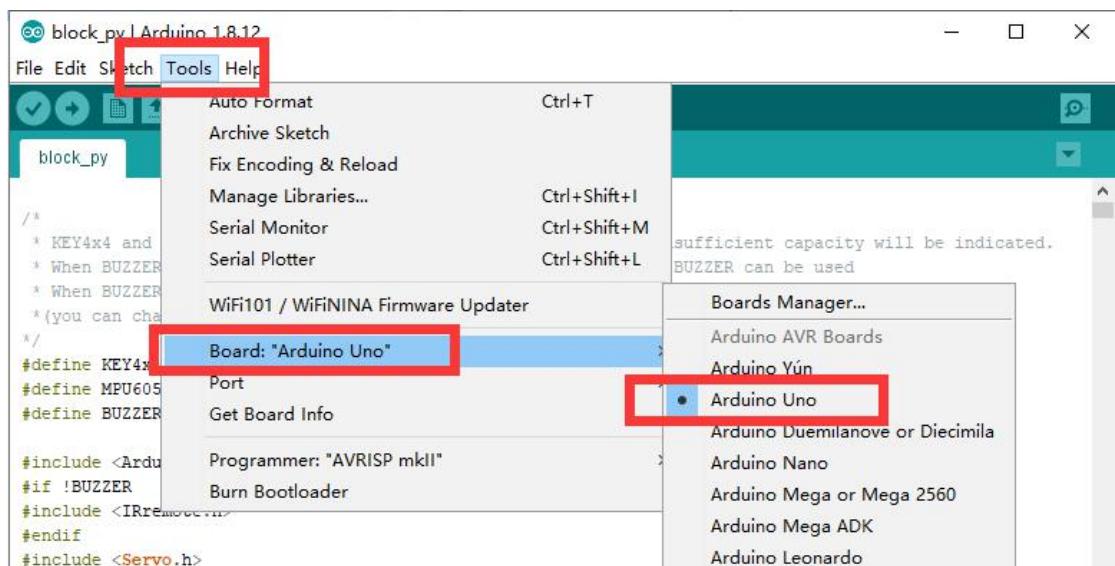

(8) Find the Arduino software on Desktop or the place where you installed the Arduino software, select it and click "Open".

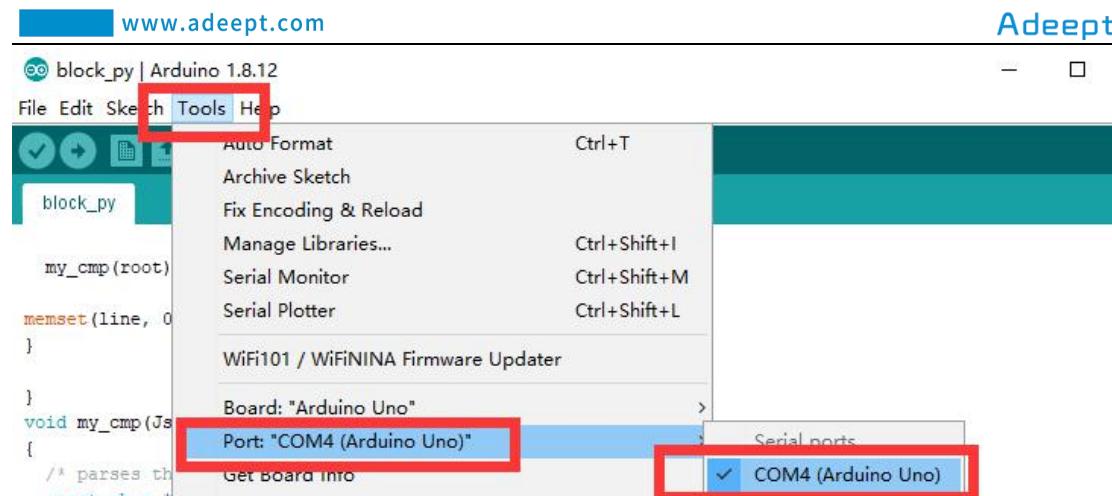

(9) Then the Arduino software opens the file "block\_py.ino".

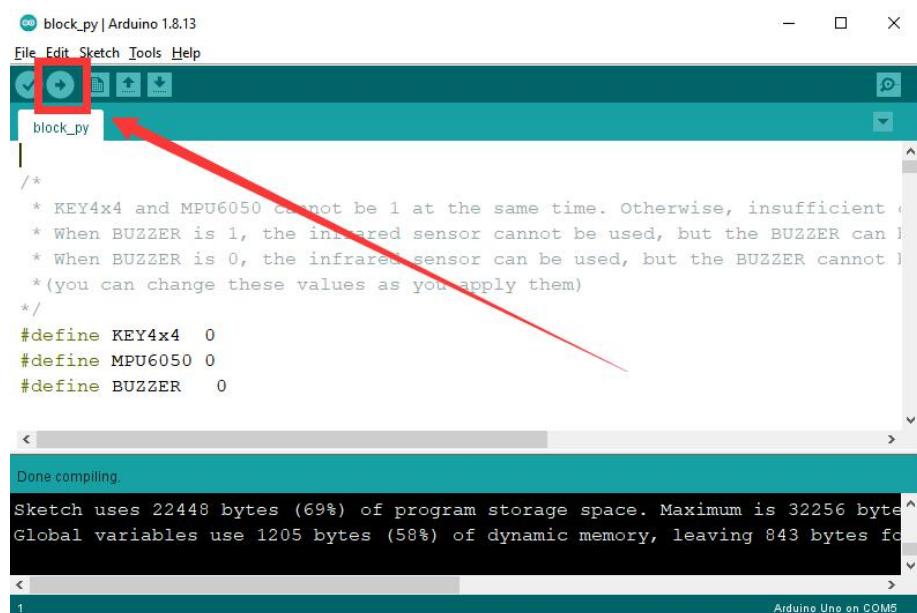

(10) First select the Arduino development board as UNO version with Tools.

(11) Then continue to select the "Port" of the Adept Arm Drive Board connected to the computer with Tools.

(12) Click the Upload button  to download the code program to the Arduino development board.

(13) We re-use the Arduino software to open the "block\_py.ino" file, and then click the Upload button  again to download the code program to the Adeept Arm Drive Board development board. After the download is successful, the following picture is shown:

www.adeept.com

<b>GUI info v1.0.py</b>	2020/5/25 17:55	Python File	8 KB

(16) After opening the file, the following interface will appear. We need to record this IP address, which will be used later: 192.168.3.69

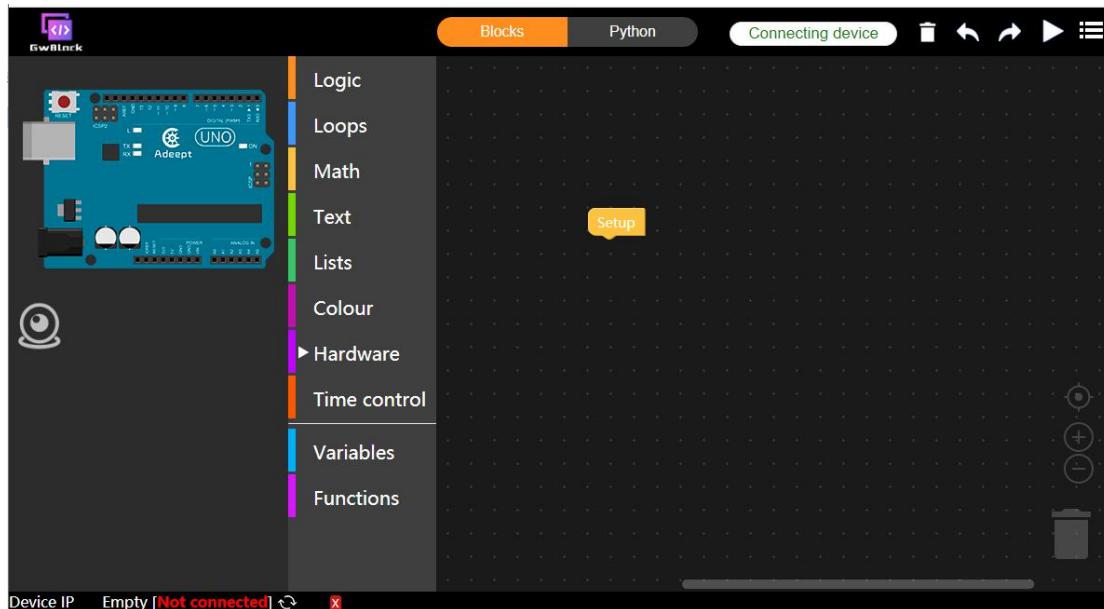

(17) In the input box, enter the port we set in step (11). Everyone's port is different. The port of my Adeept Arm Drive Board development board is: COM4. After entering, click the Connect button.

(18) Enter the URL of the GwBlock graphical editor in the browser:

[http://www.adeept.com/gwblock/?hd\\_mo=uno\\_r3](http://www.adeept.com/gwblock/?hd_mo=uno_r3)

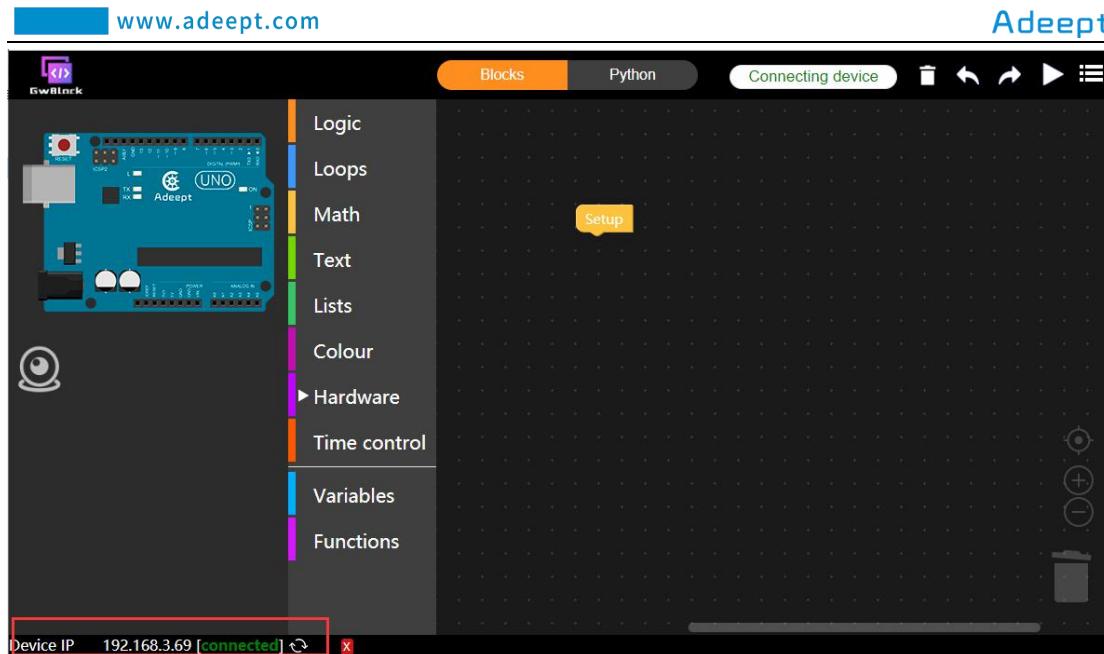

After successfully entering the website, the interface is as follows:

(19) Click the "Connecting device" button in the upper right corner. In the pop-up box, enter the IP address we recorded in step (16), as shown below, and then click the Connecting button.

(20) After the connection is successful, a green "connected" will appear in the lower left corner of the interface, indicating that the connection with the Adeept Arm Drive Board is successful.

## 6.3 The method of reconnecting the GwBlock graphical editor

In the following cases, you need to reconnect to the GwBlock graphical editor:

- [1] When you close the GwBlock editor.
  - [2] When you close the Adeept Arduino Robot window.
  - [3] When you restart the computer.
  - [4] When you log in to the GwBlock website again.
  - [5] When you close the Arduino IDE.
- (1) Before doing the experiment, you must first connect the Arduino development board to the computer.
- (2) First, open the folder we provide to the user:

`AdeeptRoboticArmforArduinoV3_5`, after opening, as shown below:

AdeeptRoboticArmforArduinoV3_5 > 01 Software Package >		
Name	Date modified	Type

libraries	8/4/2020 10:03 AM	File folder
websocket	8/3/2020 10:43 AM	File folder

(3) Open this folder: block\_py again, and find a block\_py.ino file inside, as shown below:

名称	修改日期	类型	大小
block_py.ino	2020/5/25 17:55	INO 文件	2

(4) Double-click to open this block\_py.ino file (use Arduino to open!), as shown below:

```

/*
 * KEY4x4 and MPU6050 cannot be 1 at the same time. Otherwise, insufficient ...
 * When BUZZER is 1, the infrared sensor cannot be used, but the BUZZER can ...
 * When BUZZER is 0, the infrared sensor can be used, but the BUZZER cannot ...
 * (you can change these values as you apply them)
 */
#define KEY4x4 0
#define MPU6050 0
#define BUZZER 0

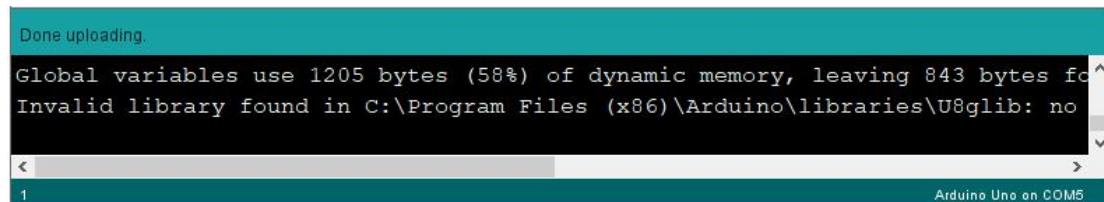

Done compiling.

Sketch uses 22448 bytes (69%) of program storage space. Maximum is 32256 bytes.
Global variables use 1205 bytes (58%) of dynamic memory, leaving 843 bytes fo

```

(5) Select COM4 as the port of Adeept Arm Drive Board in Tools in the toolbar of Arduino IDE, and click the icon  in the upper left corner to download the program to the Arduino development board. After successful download, it will prompt

as follows:

```
Done uploading.

Global variables use 1205 bytes (58%) of dynamic memory, leaving 843 bytes free.
Invalid library found in C:\Program Files (x86)\Arduino\libraries\U8glib: no
matching library found
```

1 Arduino Uno on COM5

(6) Next, open the folder we provide to the user:

**AdeeptRoboticArmforArduinoV3\_5**

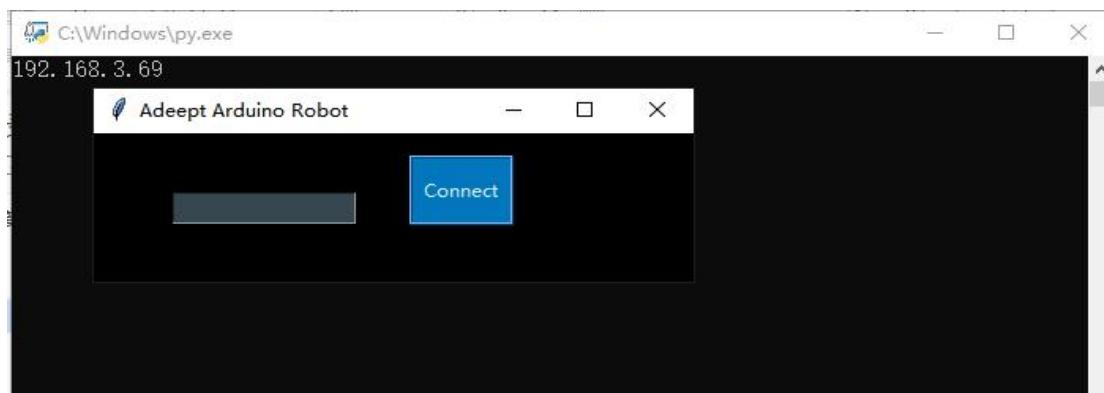

Then open 01 Software Package. As shown below:

AdeeptRoboticArmforArduinoV3_5 > 01 Software Package >		
Name	Date modified	Type
Adeept driver	8/3/2020 10:43 AM	File folder
block_py	8/3/2020 10:43 AM	File folder
libraries	8/4/2020 10:03 AM	File folder
websocket	8/3/2020 10:43 AM	File folder

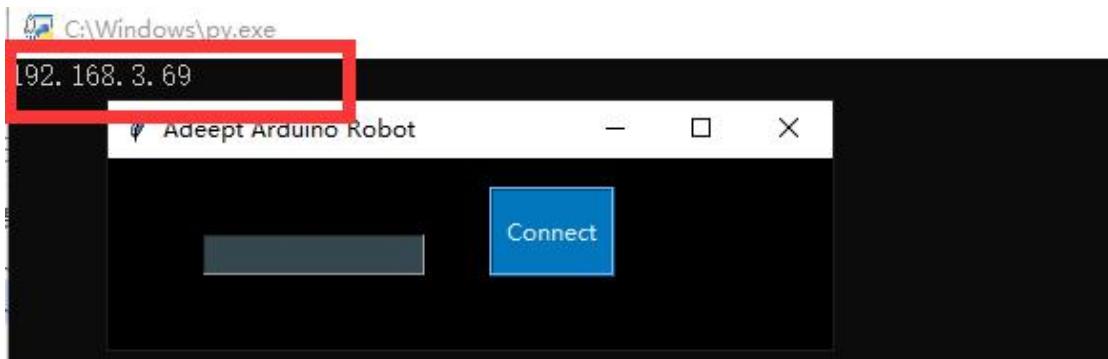

(7) Open the websocket folder. There is a file inside: GUI info v1.0.py.

名称	修改日期	类型	大小
Adeept.py	2020/5/25 17:55	Python File	
GUI info v1.0.py	2020/5/25 17:55	Python File	

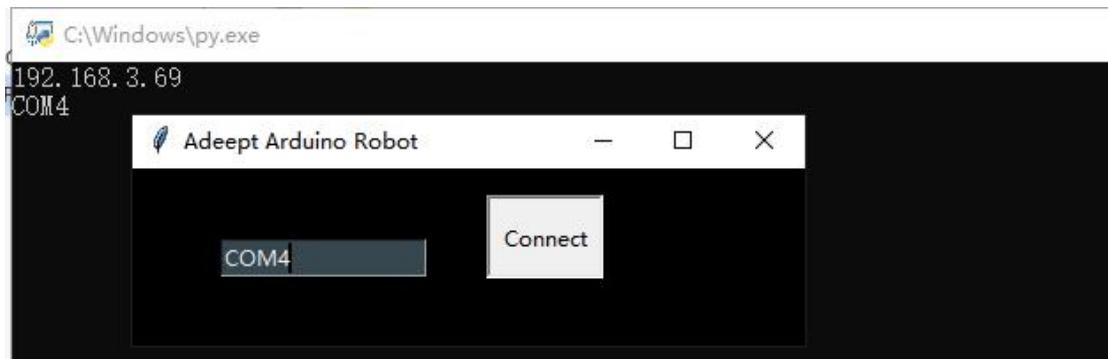

(8) Double-click to open the GUI info v1.0.py file, and the following picture will appear after opening:

(9) After opening the file, the following interface will appear. We need to record this IP address, which will be used later: 192.168.3.69

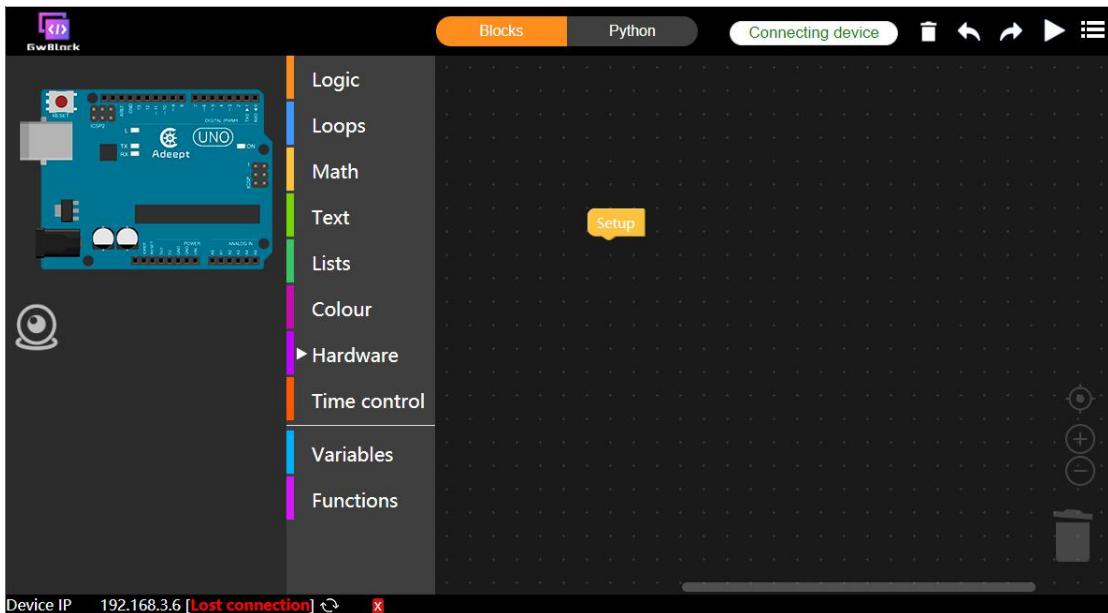

(10) Enter the Arduino software download program in the input box of Adeept Arduino Robot. The connected port number: COM4. Click the Connect button. As shown below:

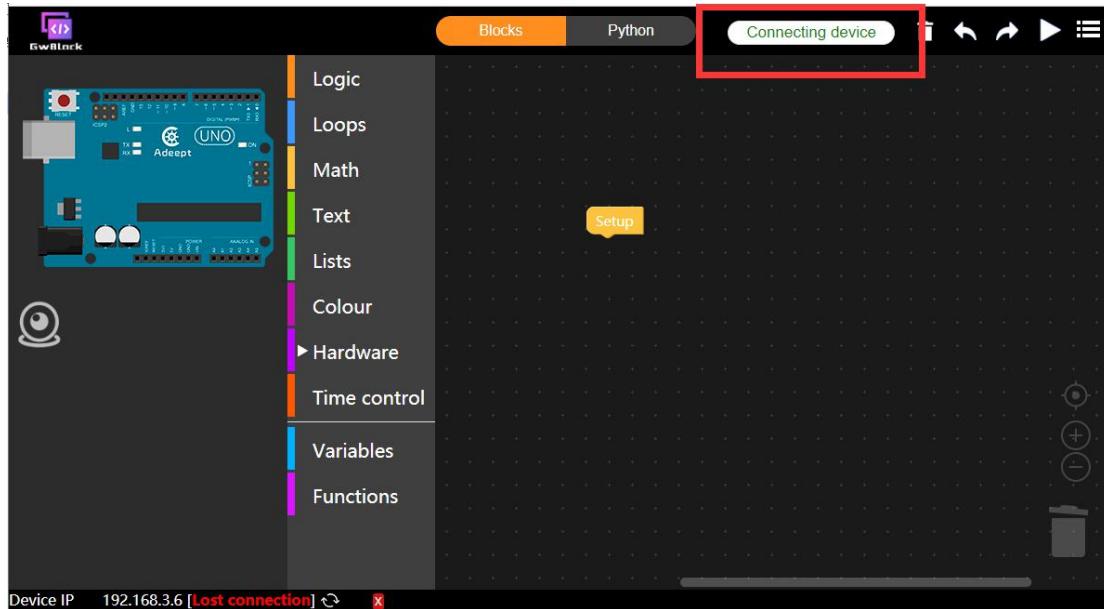

(11) Enter the URL of the GwBlock graphical editor in the browser:

[http://www.adeept.com/gwblock/?hd\\_mo=uno\\_r3](http://www.adeept.com/gwblock/?hd_mo=uno_r3).

After successfully entering the website, the interface is as follows:

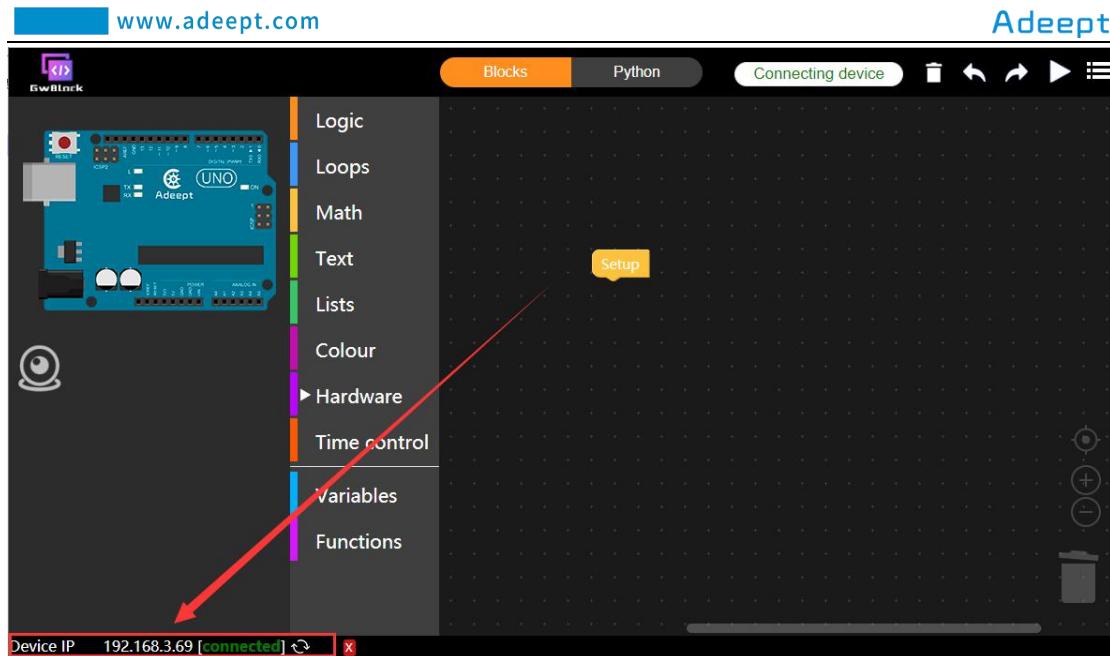

(12) Click the "Connecting device" button in the upper right corner. It will show as below:

(13) In the pop-up box, enter the IP address in step (9): 192.168.3.69. And then click the Connecting button, as shown below:

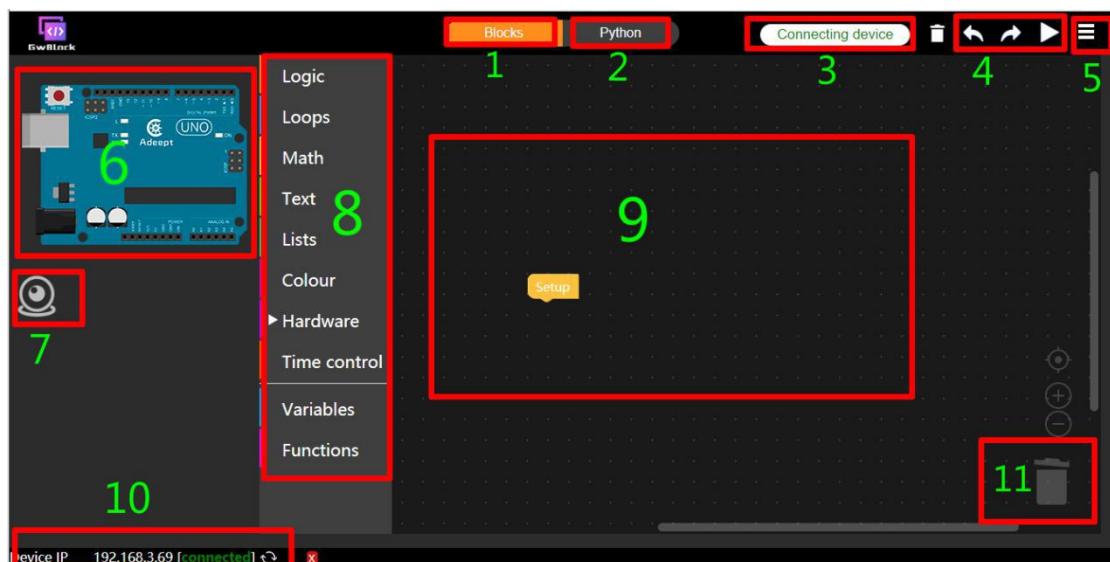

(14) After a successful connection, as shown below, a green connected prompt will appear in the lower left corner. It means that we have successfully connected to the GwBlock graphical editor, with which we can realize the graphical programming of Arduino. Later I will teach you how to use GwBlock graphical editor.

## 6.4 Get to know about Arduino's graphical editor GwBlock

The functions of the buttons on the main interface of the GwBlock editor will be described in detail below according to the function numbers in the picture. As shown below:

**【1】 Blocks:** Click this button to switch to the programming mode of the graphical code block.

**【2】 Python:** Click this button to display the edited graphical code block in the form of Python code.

**【3】 Connecting device:** Click this button to connect to the Arduino development board, which requires you to enter the IP address.

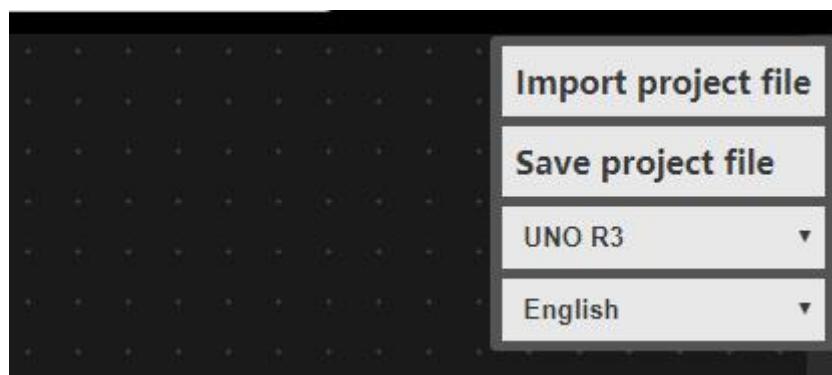

**【4】**  :  
(1)  is the cancel button. Click it to return to the state of the previous operation (cancel this operation).

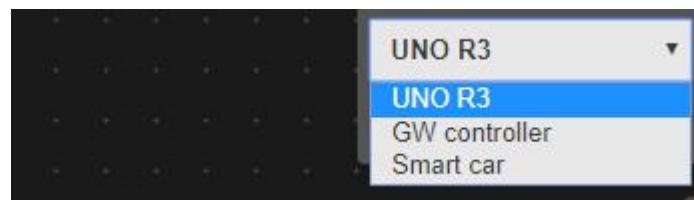

(2)  is the forward button. Click it to advance to the state of the next operation.

(3)  is the button to run the program. Click it to run the correct program we have compiled.

**【5】**  is a drop-down menu button:

Under the drop-down menu button, you can "Import project file" and "Save project file". In addition, by the drop-down button on the right of UNO R3, you can switch to the programming mode of different controllers. We are using Arduino UNO R3 version of the development board in the current course, so we choose UNO R3 mode to programmatically control Arduino.

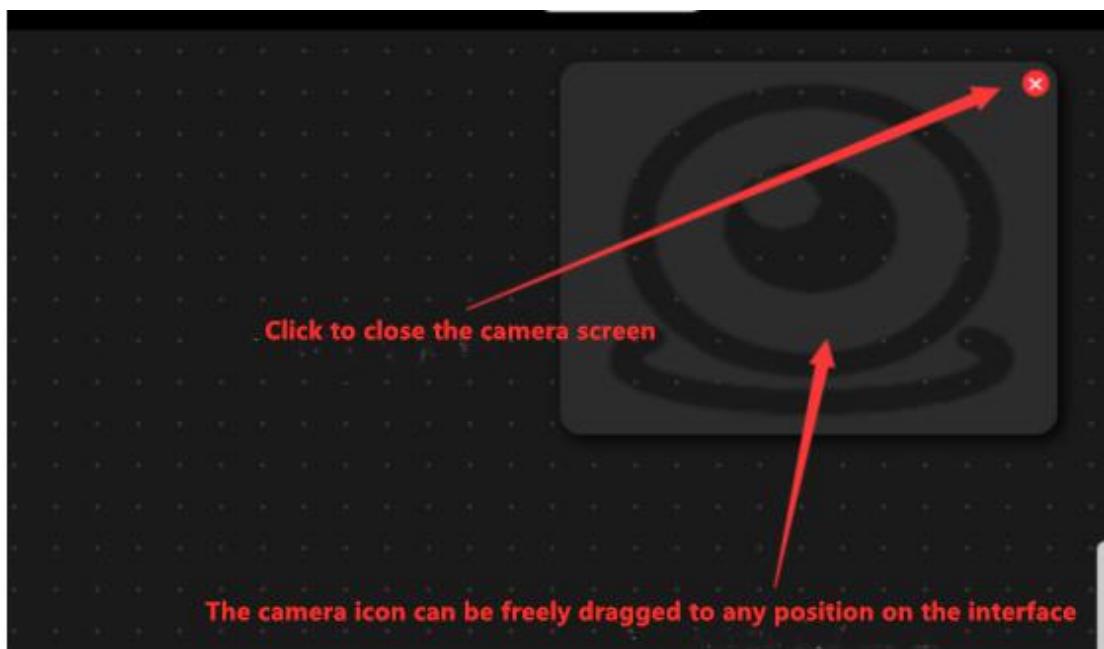

You can also switch the language display mode of the editor by the drop-down

button to the right of English. Currently, we only support English and Simplified Chinese.

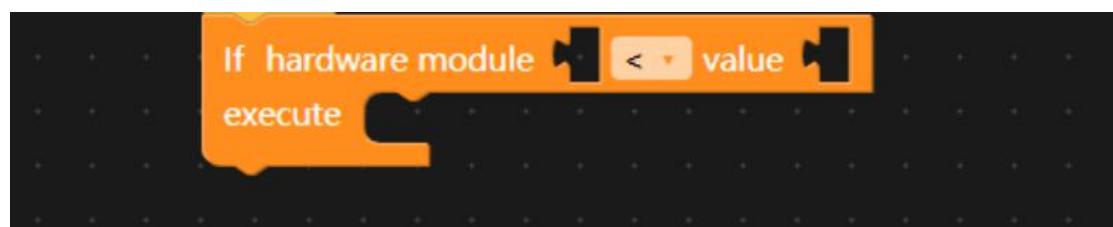

【6】 is the icon of the Arduino UNO development board, indicating that it is currently in the Arduino programming mode.

【7】 is the camera button, which is gray in the initial off state:  When you click it, the camera will turn red: 

【8】 is the code instruction module toolbar. You can select the code instruction block you need here.

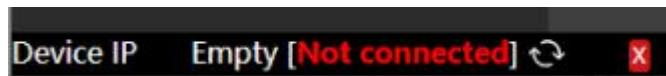

【9】 is the editing area (code area or work area), where we edit the code instruction block. Each code instruction block must be placed below **Setup**.

【10】 is the connection status of the device. There are two states:

(1) The following is displayed when the device is not connected:

(2) After the device is successfully connected, the display is as follows:

【11】 is a code trash, you can drag and drop the code instruction block to delete it.

## 6.5 Controlling the movement of the robotic arm with GwBlock graphical programming

### 6.5.1 Run the program for this lesson

1. After successfully connecting to the GwBlock graphical editor, you need to click the drop-down button in the upper right corner, as shown below:

2. Then click Import project file to import the external project file. After opening it, a blank page will appear. You need to make a modification in the lower right corner and select All Files, as shown below:

3. Then the folder will be displayed. As shown below:

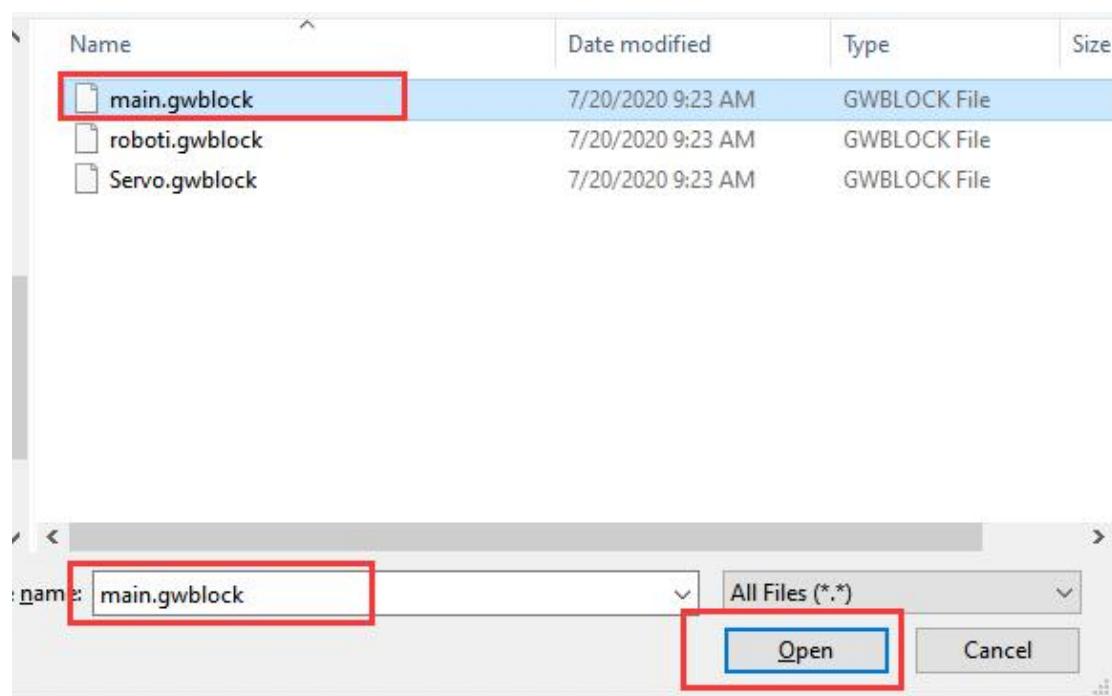

↳ This PC > Local Disk (H:) > Adeept > AdeeptRoboticArmforArduinoV3\_5 >

Name	Date modified	Type	Size
01 Software Package	8/4/2020 3:07 PM	File folder	
02 Course Code	8/4/2020 4:07 PM	File folder	

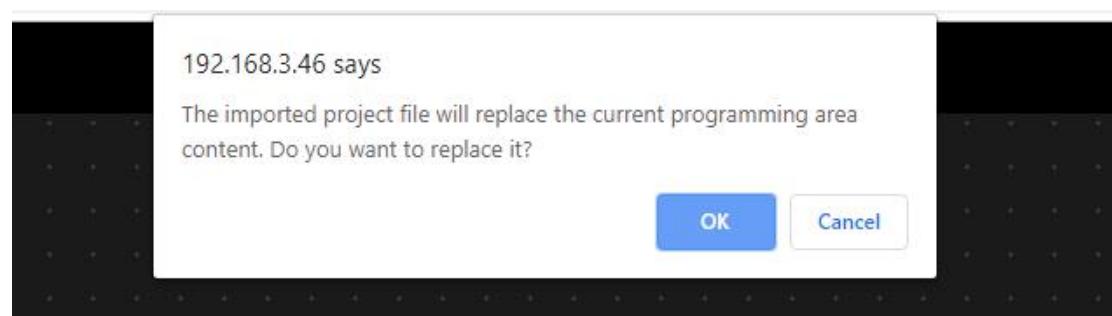

4. Find the user folder AdeeptRoboticArmforArduinoV3\_5→02 Course Code→Lesson 5 block of Adeept, as shown below:

Name	Date modified	Type	Size
Lesson 1 potentiometer	8/3/2020 6:05 PM	File folder	
Lesson 2 servo	8/4/2020 9:58 AM	File folder	
Lesson 3 OLED	8/4/2020 10:59 AM	File folder	
Lesson 4 EEPROM	8/4/2020 1:50 PM	File folder	
<b>Lesson 5 block</b>	8/4/2020 3:07 PM	File folder	
Lesson 6 GUI	8/4/2020 4:07 PM	File folder	

5. Open the Lesson 5 block folder and select the "main.gwblock" file. This file is our graphical code program for this lesson. Click "Open" in the lower right corner, as shown below:

6. Click OK, as shown below:

7. Click the button  in the upper right corner, after successfully running the

program, you can control the movement of the robotic arm by rotating the potentiometer button on the Adeept Arm Drive Board.

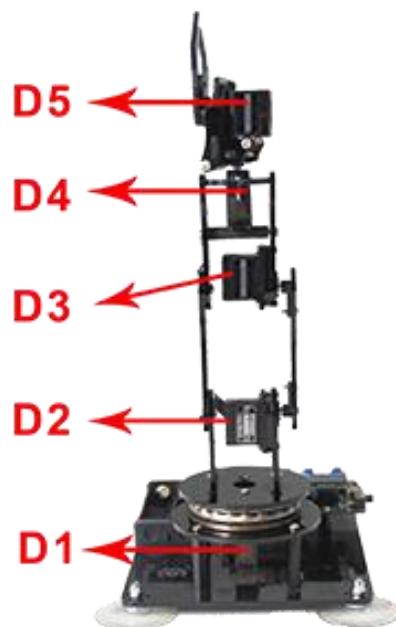

When you rotate the A0 button, by controlling the rotation of the D1 servo, you can make the robotic arm rotate left and right, and the rotation range is 0~180°;

When you rotate the A1 button, by controlling the rotation of the D2 servo, you can control the robot arm to swing up and down, with a swing range of 0~180°;

When you rotate the A2 button, by controlling the rotation of the D3 servo, you can control the forearm part of the robotic arm to swing up and down, with a swing range of 0~180°;

When you rotate the A3 button, you can control the rotation of the foremost part of the robotic arm by controlling the rotation of the D4 servo, and the rotation range is 0~180°;

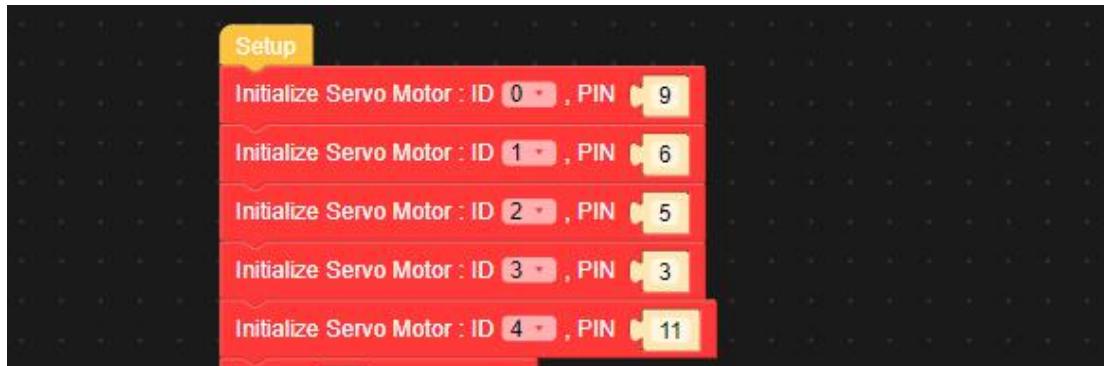

When you rotate the A6 button, by controlling the rotation of the D5 servo, you can control the opening and retraction of the clip structure of the robotic arm, ranging from 30 to 100°;

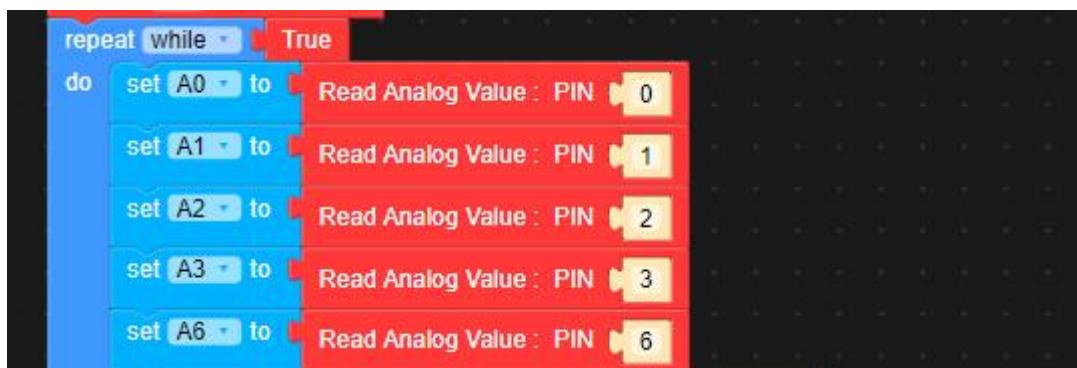

### 6.5.2 Learning the code program for this lesson

In the GwBlock graphical editor, all code programs are executed from **Setup**.

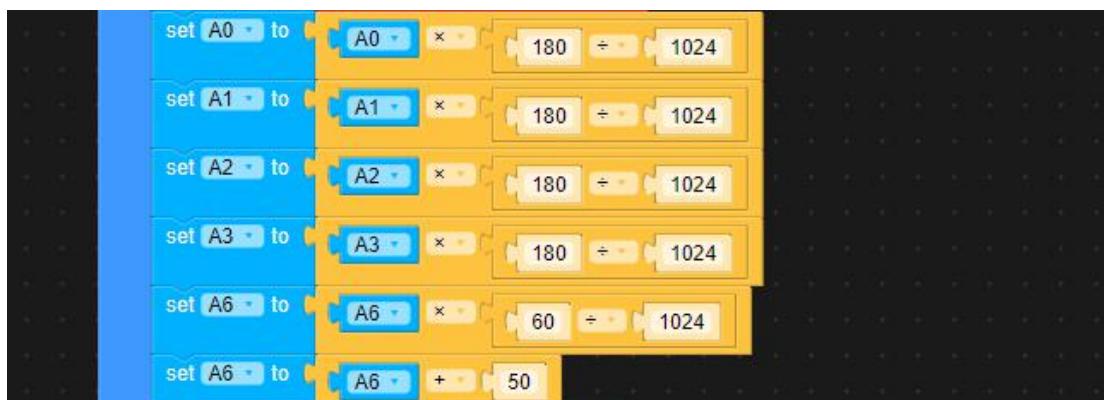

Initialize the servo.

Read the data of the potentiometer button.

Convert the read potentiometer analog data.

Control the movement of each servo respectively.

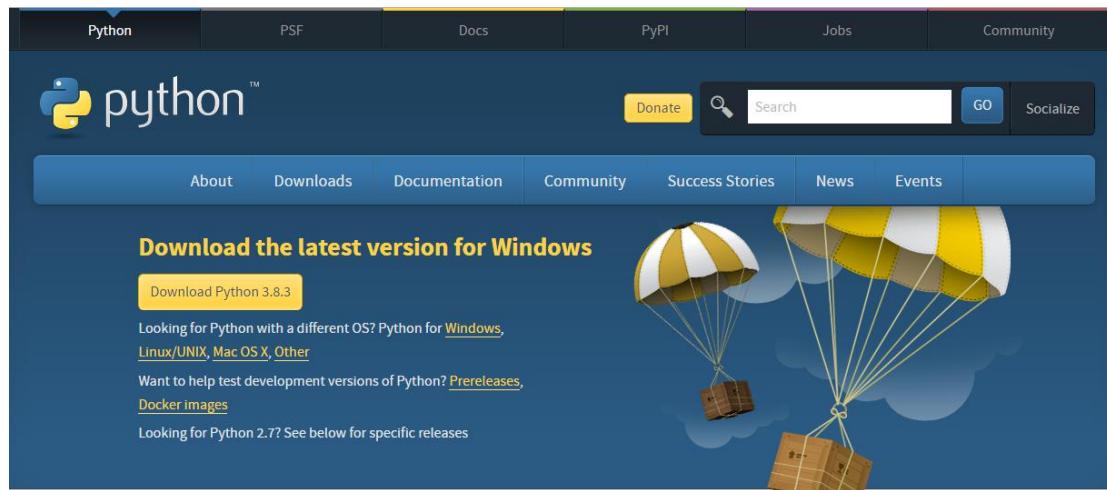

# Lesson 7 Controlling the Robotic Arm with the GUI Interface

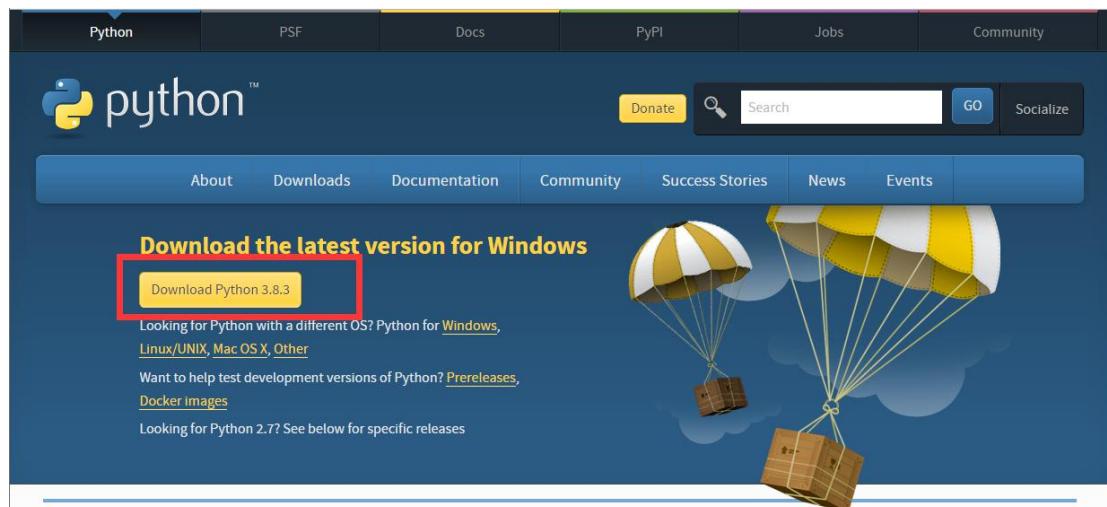

In this lesson, you will learn how to control the movement of the robotic arm with the GUI interface.

## 7.1 Downloading and installing Python

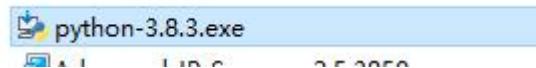

(1) Log in to the official website by browser: <https://www.python.org/downloads/>

(2) Click the "Download Python 3.8.3" button to download and wait for the download to complete:

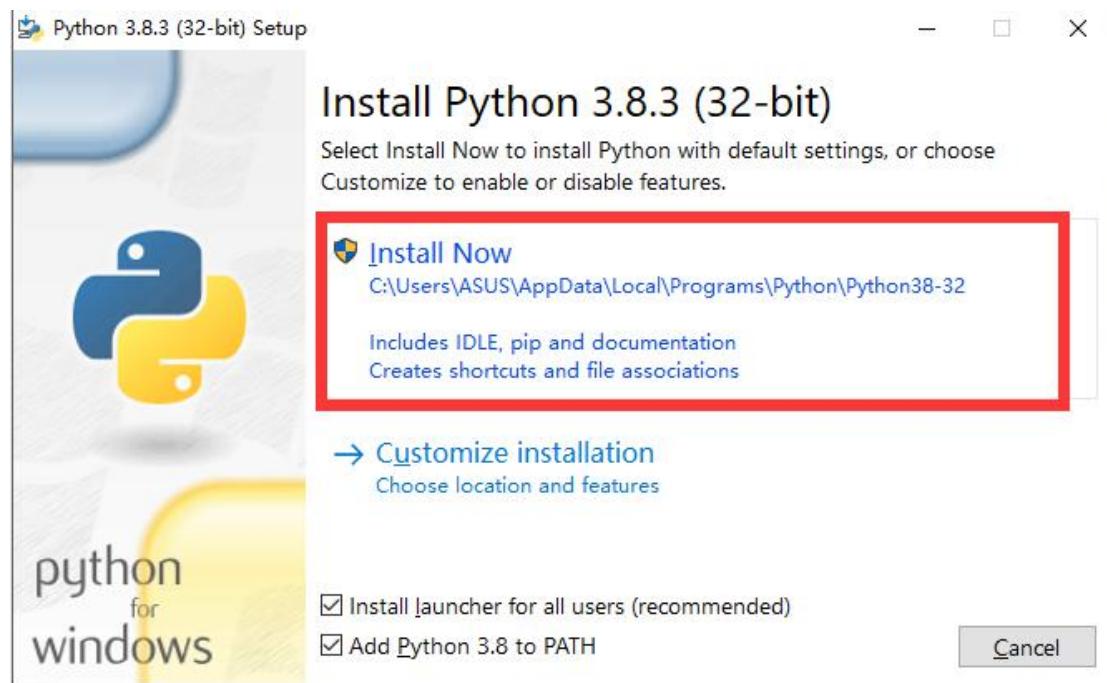

(3) Open the downloaded file, double-click to open it to install:

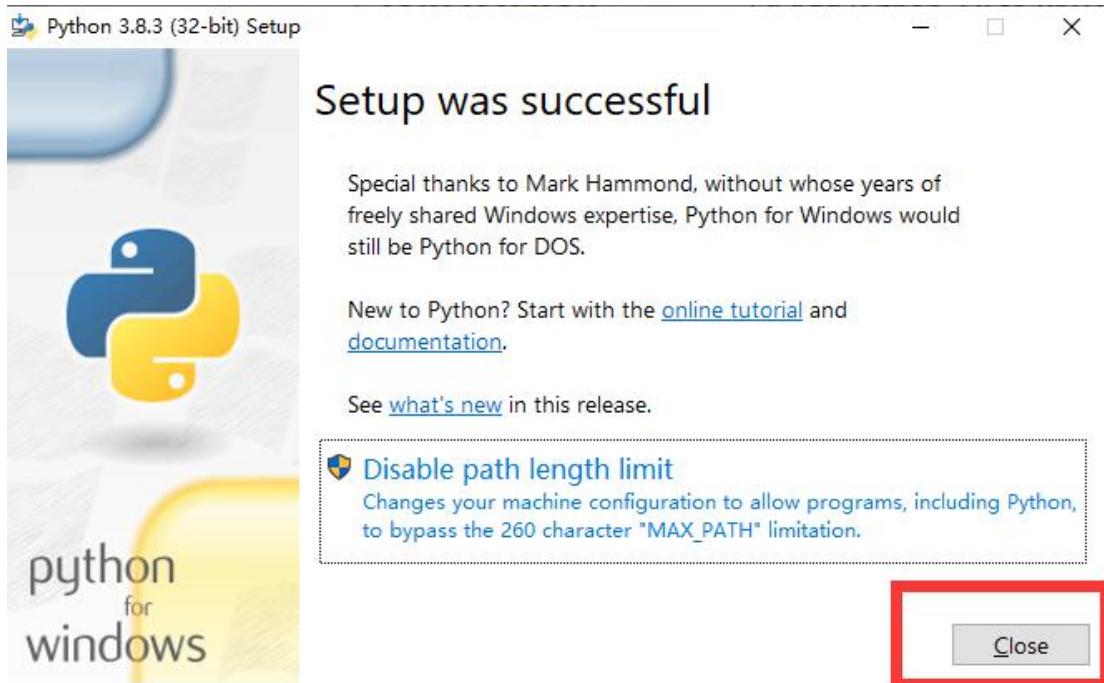

(4) Select the "Add Python 3.8 to PATH" option:

(5) Then click "Install Now" to install.

(6) Wait for the Python installation to complete and click "Close" to close.

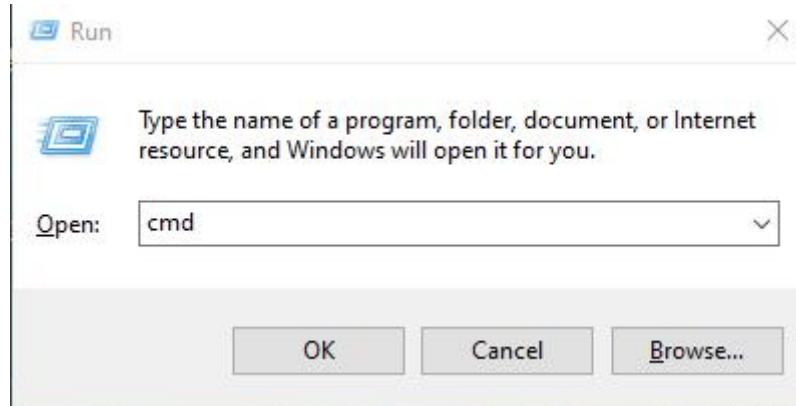

## 7.2 Installing pySerial

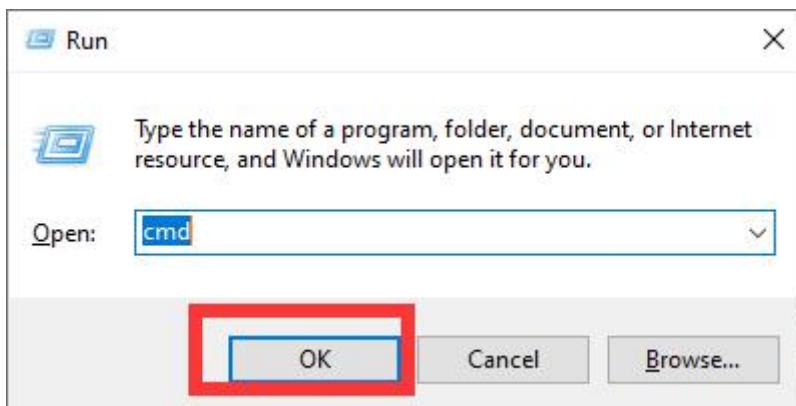

pySerial encapsulates the serial communication module, supporting Linux, Windows, BSD (may support all operating systems that support POSIX), Jython (Java) and IconPython (.NET and Mono). The pyserial module encapsulates access to the serial port. The port number starts from 0 by default. There is no need to know the port name in the program. APIs like file reading and writing, read and write (readline, etc. are also supported), support binary transmission, no null elimination, no cr-lf conversion. All programs are completed by Python. In addition to the standard library, it does not depend on other packages, except pywin32 (windows), JavaComm (Jython). POSIX (Linux, BSD) only depends on the Python standard library. APIs like file read and write, read, write (readline, etc. are also supported), support binary transmission, no null elimination, no cr-lf conversion, all programs are all done by Python, and do not depend on other packages except the standard library, except pywin32 (windows), JavaComm (Jython). POSIX (Linux, BSD) only depends on the Python standard library.

Before downloading and installing, you need to connect the Adeept Arm Drive Board development board to your computer.

(1) Press Win+R shortcut key to open CMD under Windows 10:

(2) Click "OK":

(3) Enter the command in the window:

**pip install pyserial**

Press the Enter and wait for the installation to complete.

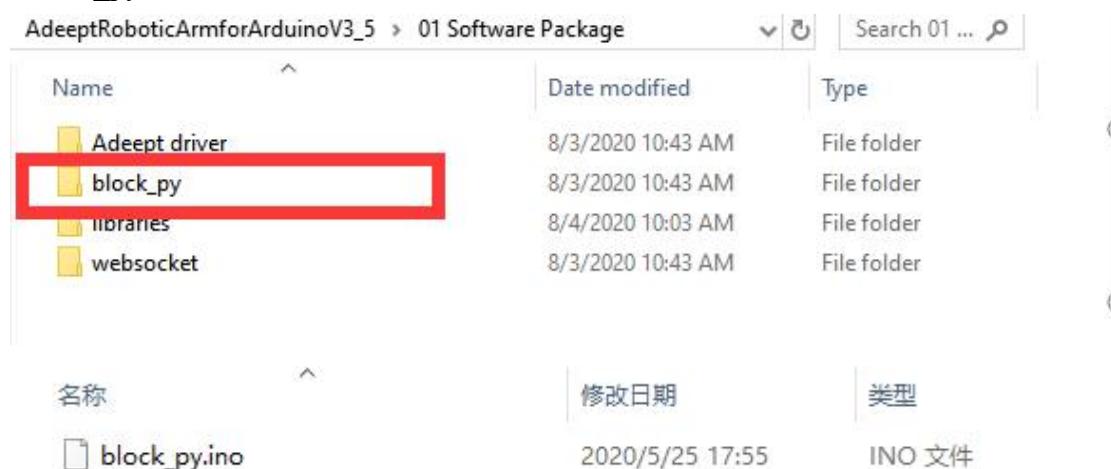

```
C:\Windows\system32\cmd.exe
Microsoft Windows [版本 10.0.18362.836]

```

## 7.3 Opening the GUI interface

(1) Enter the folder "AdeeptRoboticArmforArduinoV3\_5" → "01 Software Package" → "block\_py" provided by Adeept for users, and find this file: "block\_py.ino".

(2) Then right-click the file: "block\_py.ino". Select "Open with" → "Choose another app".

(3) Click "More apps", and then click "OK".

How do you want to open this file?

Keep using this app

Arduino IDE

Other options

Internet Explorer

Notepad++ : a free (GNU) source code editor

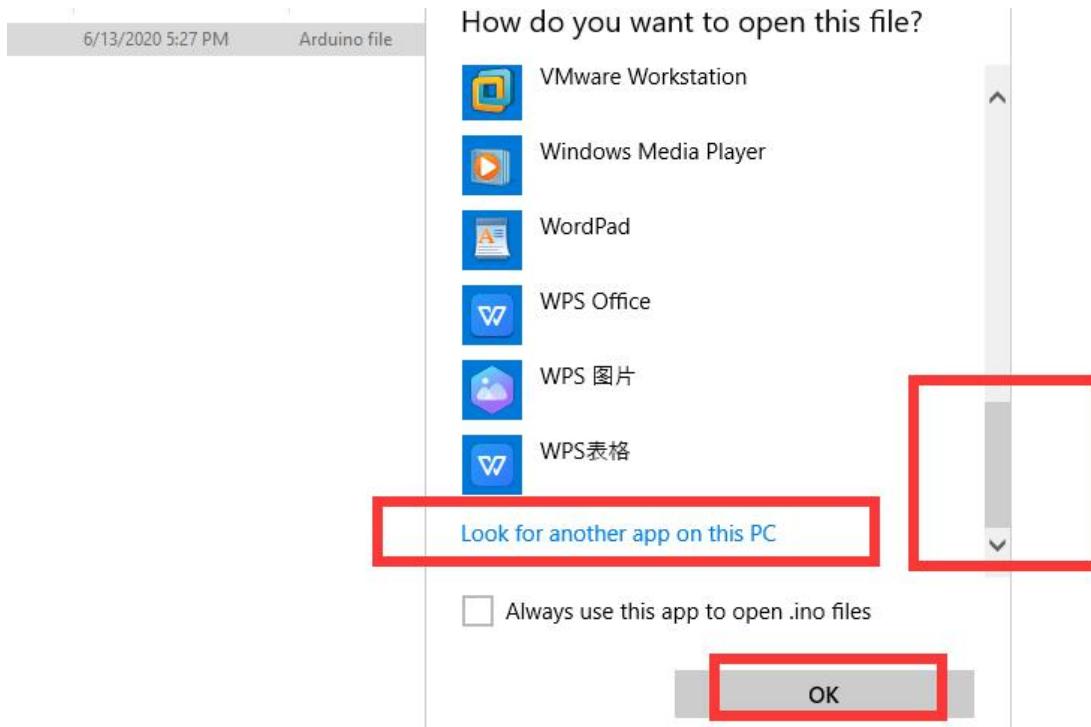

Look for an app in the Microsoft Store

[More apps ↓](#)

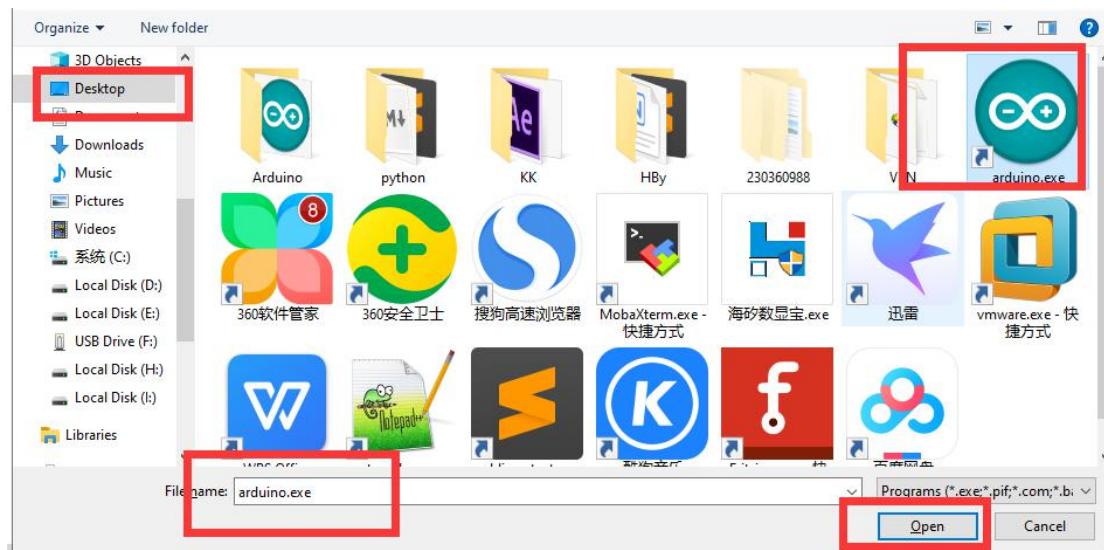

Always use this app to open .ino files

**OK**

- (4) Use the mouse to slide down, click "Look for another app on this PC", and then click "OK".

- (5) Find the Arduino software on the Desktop or where you installed the Arduino software, select it, and finally click "Open".

(6) At this time, the Arduino software opens the file "block\_py.ino".

```

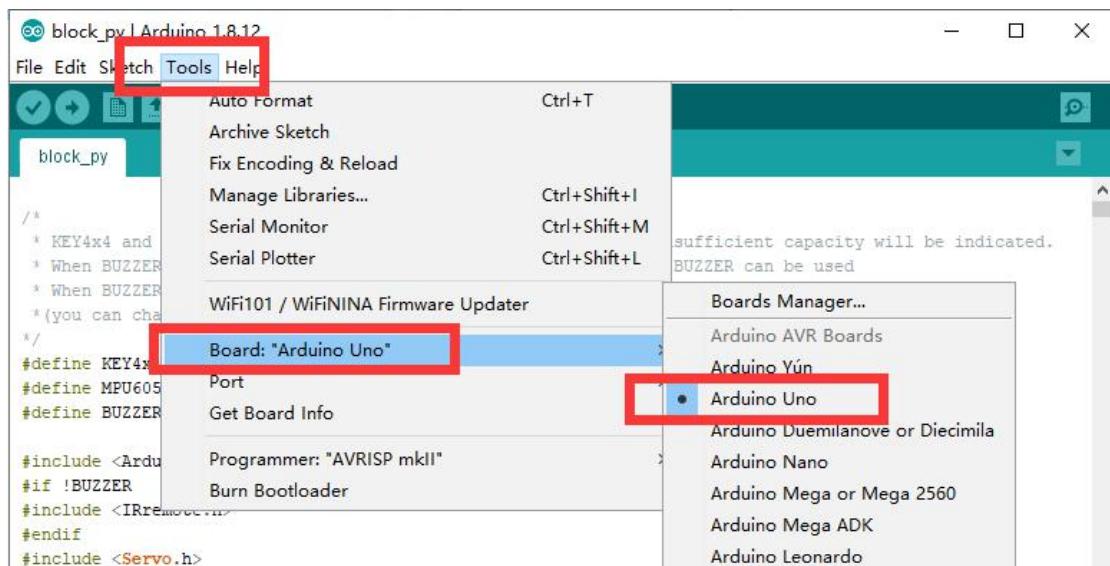

/*
 * KEY4x4 and MPU6050 cannot be 1 at the same time. Otherwise, insufficient capacity will be indicated.
 * When BUZZER is 1, the infrared sensor cannot be used, but the BUZZER can be used
 * When BUZZER is 0, the infrared sensor can be used, but the BUZZER cannot be used
 * (you can change these values as you apply them)
 */

#define KEY4x4 0
#define MPU6050 1
#define BUZZER 0

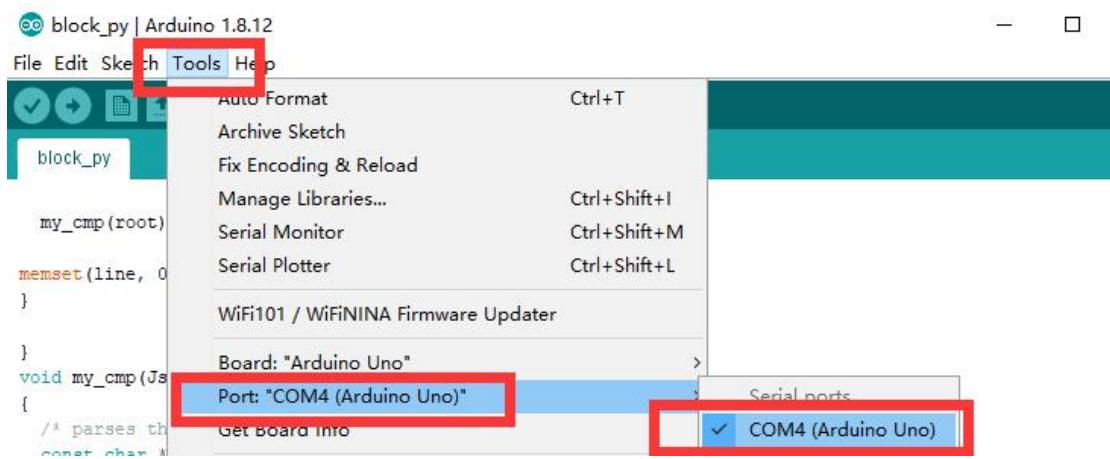

#include <ArduinoJson.h>
#if !BUZZER
#include <IIRremote.h>
#endif
#include <Servo.h>
#include <Wire.h>
#include <LiquidCrystal_I2C.h>
#include <adafruit_hcsr04.h>

```

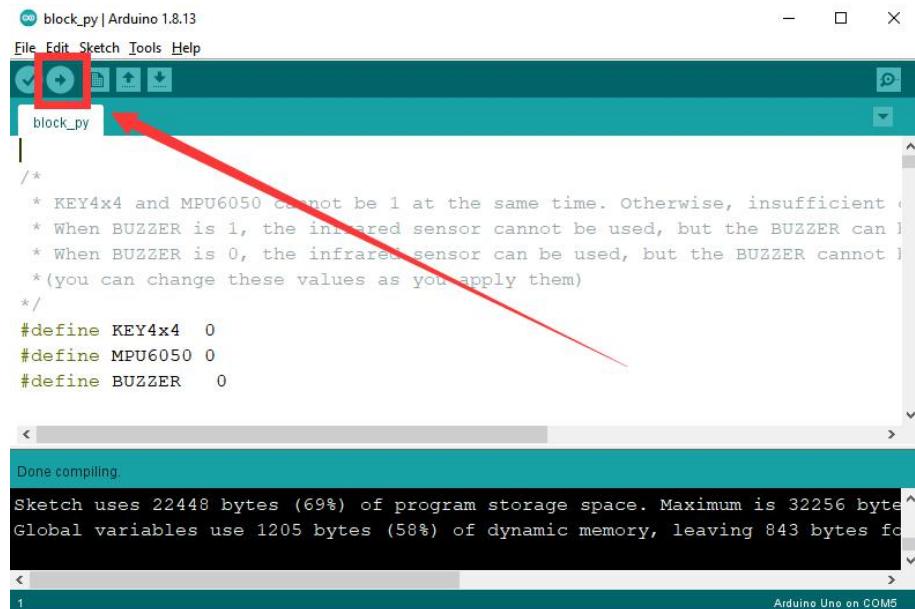

(7) First select the Arduino development board as UNO version with Tools.

(8) Then continue to use Tools to select the port “Port” of the Adeept Arm Drive Board connected to the computer.

(9) Click the Upload button  to download the code program to the Arduino development board.

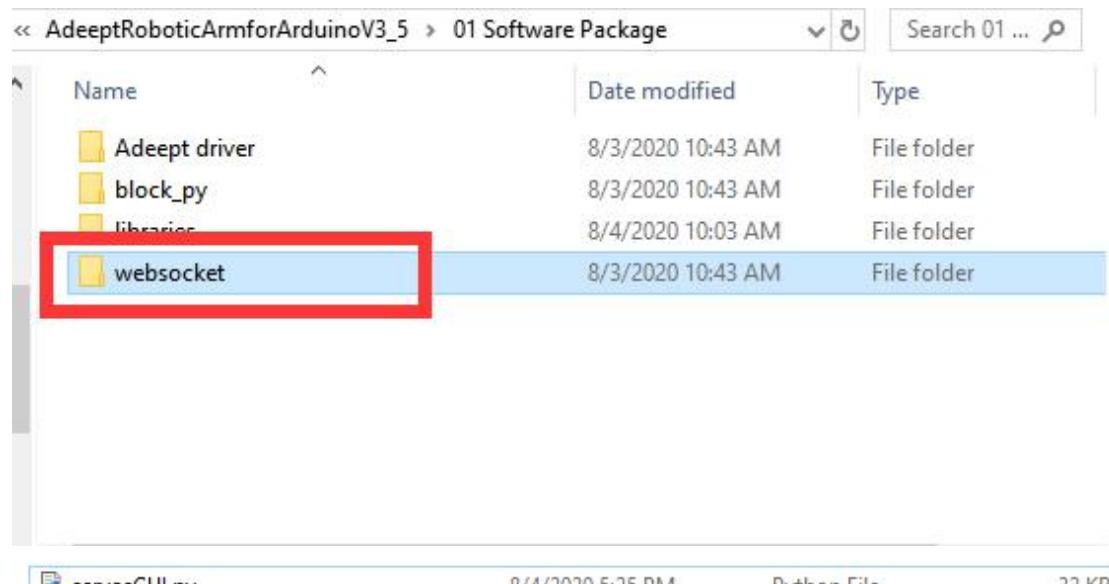

```
block_py | Arduino 1.8.13
File Edit Sketch Tools Help
block_py

/*
 * KEY4x4 and MPU6050 cannot be 1 at the same time. Otherwise, insufficient
 * When BUZZER is 1, the infrared sensor cannot be used, but the BUZZER can l
 * When BUZZER is 0, the infrared sensor can be used, but the BUZZER cannot l
 * (you can change these values as you apply them)
 */
#define KEY4x4 0
#define MPU6050 0
#define BUZZER 0

(10) Find the folder AdeeptRoboticArmforArduinoV3\_5"→"01 Software Package"→"websocket", find this file: "servosGUI.py".

<< AdeeptRoboticArmforArduinoV3_5 > 01 Software Package		
Name	Date modified	Type
Adeept driver	8/3/2020 10:43 AM	File folder
block_py	8/3/2020 10:43 AM	File folder
libraries	8/4/2020 10:03 AM	File folder
<b>websocket</b>	8/3/2020 10:43 AM	File folder

  

 servosGUI.py	8/4/2020 5:25 PM	Python File	32 KB
--	------------------	-------------	-------

(11) Double-click to open this file: servosGUI.py

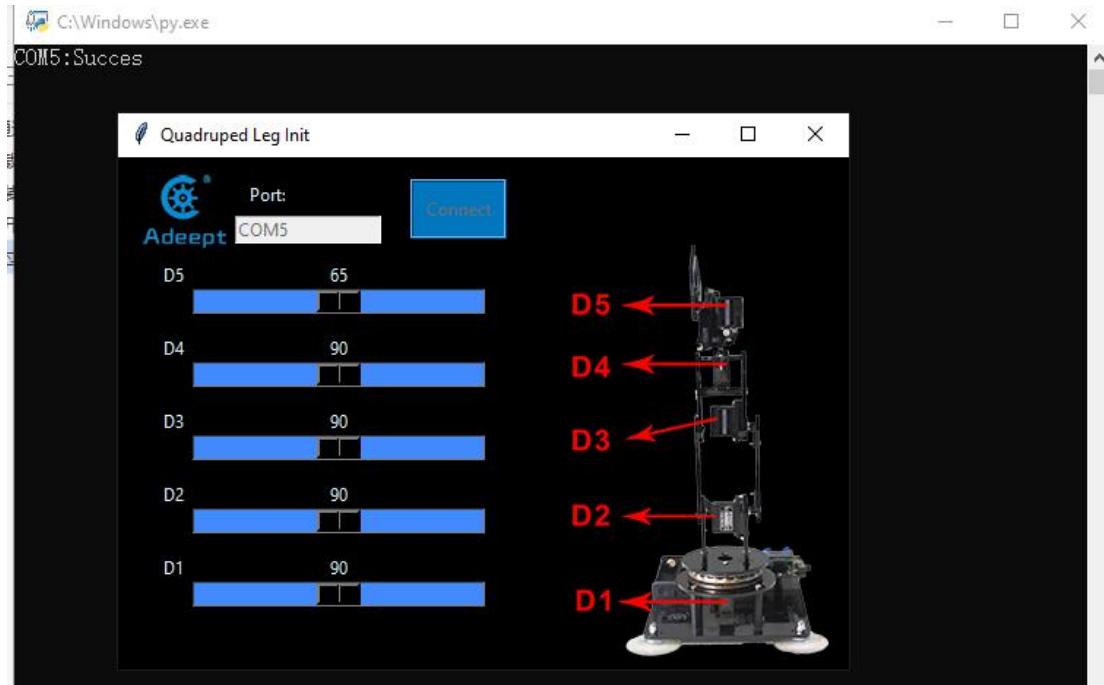

Name	Date modified	Type	Size
__pycache__	8/4/2020 5:29 PM	File folder	
Adeept.py	8/4/2020 5:25 PM	Python File	4 KB
GUI info v1.0.py	8/4/2020 5:25 PM	Python File	10 KB
IP.txt	8/4/2020 5:25 PM	Text Document	1 KB
logo.png	8/4/2020 5:25 PM	PNG 图片文件	62 KB
logo1.png	8/4/2020 5:25 PM	PNG 图片文件	8 KB
<b>servosGUI.py</b>	8/4/2020 5:25 PM	Python File	32 KB
test.py	8/4/2020 5:25 PM	Python File	1 KB

(12) After the GUI is opened, as shown in the figure below, you need to fill in the Port in the Arduino IDE in the Port input field. For example, the Port connected to the Arduino IDE is COM5, then you enter COM5, and then click Connect. After successfully connecting, there will be a prompt message in the upper left corner: "COM5: Success".

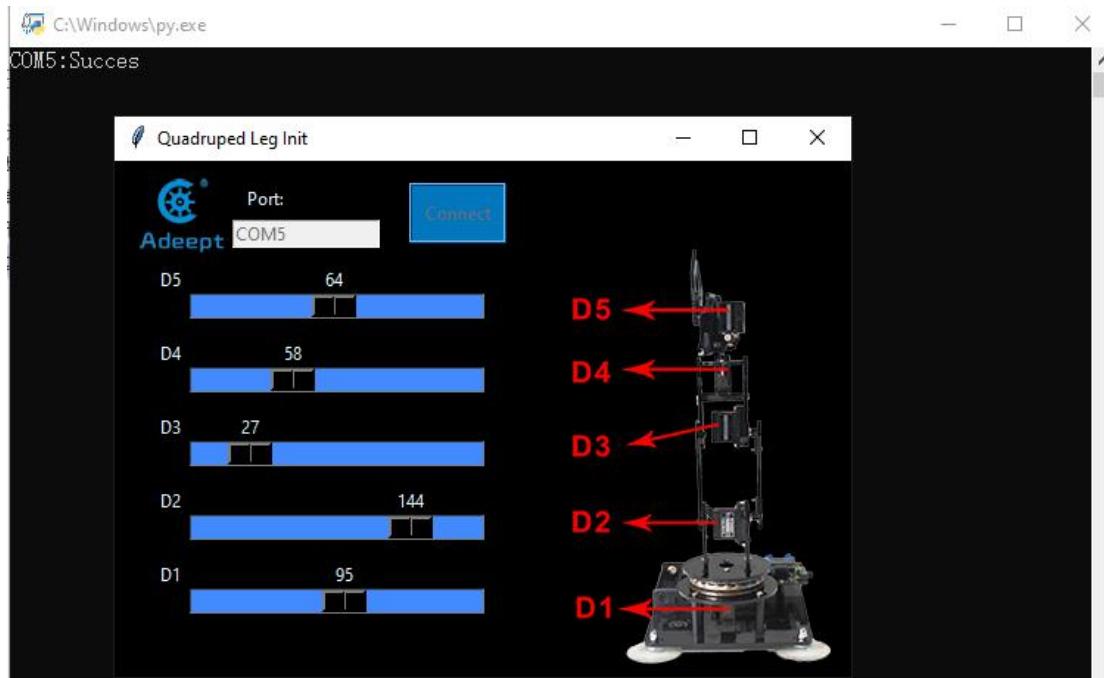

## 7.4 Controlling the robotic arm with the GUI interface

1. In the opened GUI interface, the left area is to control the movement of the servo D1~D5, and the right area is the structure diagram of the servo of the robotic arm.

2. When you need to control the robotic arm, you can slide the slider corresponding to the servo in the left area to control the movement of the robotic arm. When a certain position is slipped, a data will be displayed on the slider, this data represents the angle.
